ACKNOWLEDGMENTS—Many persons participated in the various activities of the 1972 Census of Manufactures. Primary direction of the program was performed by **Shirley Kallek**, Associate Director for Economic Fields, and **Melvin A. Hendry**, Assistant Director for Economic and Agriculture Censuses.

This report was prepared under the direction of **Elmer S. Biles**, Chief, Industry Division (until February 1975), and **Milton Eisen**, his successor. **Arthur W. Horowitz**, assisted by **John S. Berube**, was responsible for the overall management of the census and was the Industry Division's liaison officer with other divisions.

Program responsibility was shared by the following individuals, who participated importantly in the entire program: **Kenneth I. Hansen** and **Dale W. Gordon**, Census Durables; **Michael Zampogna**, Census Non-durables; **Ruth Runyan**, Census Subject and Special Reports; **Malcolm E. Bernhardt**, Current Durables; **Robert J. Nealon**, Current Non-durables; and **John P. McNamee**, Minerals. The names of the supporting statisticians in the commodity areas who made significant contributions are shown in the acknowledgment statements in the 81 individually published industry reports.

Edward A. Robinson made significant contributions to the basic economic concepts and content of the census. The mathematical techniques used in editing the data and sampling the respondents were developed by **Donald F. Clark**. **Robert E. Crowther** was responsible for the annual survey component of the census of manufactures. Computer programs were prepared under the direction of **Howard Hamilton**, assisted by **Mary H. Johnson**.

The mailing, collecting of data, and processing of administrative record information were conducted by the Economic Surveys Division under the direction of **Roger Bugenhagen**, Chief. Assistance was provided by **Samuel Schweid**, **Andrew Grieco**, **Charles Venters**, **Shirley Roberts**, **Robert Viehman**, **Jerry McDonald**, **Joel Richardson**, and **Sandra Katis**.

Forms design was performed in the Administrative Services Division, **Henry J. Husmann**, Chief, **Gladys Potts**, **Joyce Teague**, **Helen Hindt**, and **Margaret Swinton** made significant contributions.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

Clerical and data keying operations were performed in the Data Preparation Division at Jeffersonville, Indiana, under the direction of **O. Bryant Benton**, Chief, who was assisted by **Don L. Adams** and **Robert L. Allen**.

The geographic coding procedures were developed in the Geography Division under the direction of **Jacob Silver**, Chief, assisted by **Zigmund Decker**, **Terence McDowell**, **Silla Tomasi**, **Robert Hamill**, **David Christy**, **Kurt LeGait**, and **John Hawkins**. Computer processing was directed by **James R. Pepal**, Chief, Computer Services Division. **C. Thomas DiNenna**, **Jesse Verdeja**, and **Willie E. Clark** provided staff assistance.

Donald Young of the Economic Census Staff participated in the overall planning and review of the census operations.

Special acknowledgment is also due the many businesses whose cooperation has contributed to the publication of these data.

The statistics presented in this volume incorporate the subject and industry report series MC72(1)-1 and MC72(2).

---------------------------------	--------------

The review and issuance of the final industry and State publications were done on a flow basis. Errors were uncovered for a limited number of data cells after the final publications were issued. Because of the expense involved, corrections were made to the previously published data only if they resulted in a revision of 3 percent or more for an individual industry or 1 percent or more for a State. These corrections are included in the final volumes.

All errors identified in any phase of the review were carried to the computer file used to produce the final subject and special reports. Therefore, those reports represent the most accurate data available.

I. GENERAL BACKGROUND

1. THE ECONOMIC CENSUSES

General.—The economic censuses provide a comprehensive statistical profile of a large segment of the national economy. This program includes censuses of manufactures, retail trade, wholesale trade, selected services industries, mineral industries, construction industries, and transportation. In 1972, these censuses accounted for nearly 77 percent of the \$785 billion of national income originating in the private sector. The principal industry groups not covered were finance, insurance, and real estate; agriculture and forestry; communications; electric, gas, and sanitary services; and health and medical services, except for laboratories operating on a profit basis.

Uses and Users of Census Data.—The economic censuses are the primary source of facts about the structure and functioning of the economy and therefore provide information essential both for government and business. They furnish an important part of the framework for such composite measures as the national accounts. The census measures also provide weights and serve as benchmarks for current surveys of industrial activity and for indexes of industrial production, productivity, and price, all of which are essential in developing the general background for understanding particular economic situations.

There is widespread use of the economic censuses by manufacturers and distributors who need to establish measures of

their potential markets in terms of areas, kinds of business, and kinds of products; and by managers in various industries and trades who need facts for purposes of economic or sales forecasting, for analysis of sales performance, for the layout of sales territories, for the allocation of advertising budgets, and for the location of plants, warehouses, and stores. For these business purposes, census facts are invaluable. Likewise, trade and professional associations need census information to learn how their industry is changing; chambers of commerce and State and local governments need to understand the business structure and changes occurring in their areas. Business magazines and academic researchers rely on census facts as background for many of their articles.

Following every census, reports are purchased by thousands of business and other users; likewise, census facts are widely disseminated by trade associations, business journals, and the daily press; and census volumes are available in all the major public and college libraries.

History.—The first statistical survey which can be called an economic census covered the year 1809, when inquiries on manufacturing were included with the 1810 census of population. Although the results of this pioneer effort were unsatisfactory by modern standards,¹ continued interest in measure-

¹ For an appraisal of early censuses of manufacturing, see Meyer H. Fishbein, "The Censuses of Manufactures 1810-1890." National Archives Publication No. 63-22, June 1963. Government Printing Office.

INTRODUCTION—Continued

ment of the Nation's economic progress led to successive improvements during the 19th century. By 1890, the statistical standards and procedures followed in conducting the censuses were of a fully professional quality.

All of the decennial censuses from 1810 through 1940, with the exception of 1830, included questions on manufacturing. Inquiries on mining first appeared in 1840, and censuses of mineral industries were conducted decennially through 1940. Although some business-related data were

collected in 1840, the first census of business was taken for the year 1929. This included retail trade, wholesale trade, and construction; selected service trades were covered beginning with 1933. Dates of these and other economic censuses from 1809 are shown in table A.

Enterprise Statistics.—The coordinated collection and tabulation of comparable data for several sectors beginning with 1954 has permitted the Census Bureau to develop its enter-

INTRODUCTION—Continued

prise statistics program, which relates census company-level data to the establishment data. Thus, a measurement of the integration and diversification of the American enterprise system becomes available. Also, through the enterprise statistics program, it has become possible to link census establishment-based data on a modified basis to other statistical systems such as the Internal Revenue Service's "Statistics of Income" for corporations.

Legal Provisions.—Title 13 of the United States Code specifies the frequency of the censuses, the kinds of activities to be covered, the obligation to report, the penalties for failure to report, and the confidentiality of returns. It also authorizes

the use of sampling techniques in conducting censuses. As amended in 1964, Title 13 requires the economic censuses to be taken at 5-year intervals, covering the years ending in "2" and "7." The next censuses will cover the year 1977. The pertinent portions of Title 13 are quoted in appendix D.

2. CHARACTERISTICS OF THE INDUSTRIAL SECTOR

General.—In terms of the major industry divisions established in the national accounts, manufacturing is the largest sector of the economy. In 1972, manufacturing plants employed 19 million persons, 22 percent of the civilian labor force of 86.5 million. Over the past 20 years, as shown in table B, national

INTRODUCTION—Continued

income originating in manufacturing averages almost 30 percent of the total. In 1972, government and government enterprises surpassed wholesale and retail trade which historically was the next largest sector.

Cyclical Changes.—The need for frequent and comprehensive statistics on manufacturing derives as much from its sensitivity to cyclical influences as from its relative size. Cyclical changes in income originating in manufacturing tend to be relatively larger than in the economy as a whole, as can be seen in the movement from 1929 to 1933 to 1939 in table C.

Within manufacturing, durable goods industries accounted for about 60 percent of all manufactures during recent periods. This category tends to be more volatile than nondurable goods, generally accounting for a smaller percentage of all manufactures during periods of contraction and a larger percentage during periods of expansion. In the early thirties, for example, as shown in table C, durable goods manufacturing amounted to only about one-third of the total.

Geographic Distribution.—In the early and middle 19th century, manufacturing activity was concentrated in the

Northeast. Over the past hundred and twenty years, as shown in table D, there has been a steady decline in the proportion accounted for by the Northeastern States. Industry expanded into the North Central Region in the latter part of the 19th century and, in more recent years, displayed a marked growth in the South and West.

Size Distribution.—Manufacturing activity tends to be characterized by relative large-scale operations. While there are many small manufacturing plants, they account for a relatively small part of the total output of goods. As shown in table E, over half of the plants covered in the 1972 census had less than 10 employees and they accounted for less than 3 percent of the total value added by manufacture.

3. ROLE OF THE CENSUS OF MANUFACTURES

In the farm-oriented economy of the early 19th century, industrial statistics played a relatively small role in government policy formation. A few series on physical output of commodities originated either from private sources (flour, iron, and steel, etc.) or as a byproduct of tax collection or other government functions (liquors, beer, tobacco products, etc.). Other than these, the only sources of information on the manufacturing sector were the censuses of manufactures, then taken at 10-year intervals. Today, the need for industrial statistics has greatly increased, and the user finds a vast array of detailed information covering virtually every measurable aspect of industrial activity including employment, payrolls, hours worked, production, prices, inventories, orders, investment in structures, machinery, and equipment, and consumption of raw materials, fuels, and water. Many of these statistics are available at frequent intervals and on a timely basis. Sophisticated indicators of economic progress have also been developed such as price and production indexes, gross national product, and national income, published at monthly or quarterly intervals.

In this setting, the census of manufactures still plays an essential role since no other source provides such comprehensive and detailed information on the structure of the industrial sector.

The census obtains, for every manufacturing plant with one employee or more, data on its input of labor, materials, and capital, its output of products and services, its location, and the legal form of organization of the owning firm.² These facts are obtained in sufficient detail to permit classification by industry, by size of plant, by homogeneity of output and, where desirable, by type of operation, extent of vertical integration, kind of equipment, relationship to other plants of the same firm, and other characteristics.

² For 1967 and 1972, some of this information for 120,000 small companies was not obtained directly but estimated from administrative records. See the discussion of coverage of establishments in sections 4 and 6 below.

TABLE D. Employment in Manufacturing Establishments, by Region: 1849 to 1972

Year	United States	Northeast	North Central	South	West
Number of employees (thousands)					
1972	19,029	5,306	6,135	5,221	2,367
1967	18,492	5,573	6,059	4,553	2,305
1963	16,235	5,190	5,239	3,780	2,025
1958	15,423	5,242	5,017	3,382	1,779
1947	14,294	5,429	5,109	2,710	1,054
1939	9,527	3,879	3,184	1,852	612
1929	10,198	4,246	3,516	1,758	675
1899	5,077	2,629	1,474	793	181
1849	957	696	110	146	4
Percent of U.S. total					
1972	100	28	32	27	13
1967	100	30	33	25	12
1963	100	32	32	23	13
1958	100	34	33	22	12
1947	100	38	36	19	7
1939	100	41	34	20	6
1929	100	42	35	17	7
1899	100	52	29	16	4
1849	100	73	12	15	—

Note: Detail may not add to totals because of independent rounding. 1849 data include hand and neighborhood industries, which were excluded from the censuses of manufactures beginning with 1899. Source: Census of manufactures. — Represents zero.

TABLE E. Number of Manufacturing Establishments and Value Added by Manufacture, by Size Class of Establishment: 1972

(Cumulative percentage)		
Size class	Number of establishments	Value added by manufacture
All establishments, total	100.0	100.0
1 to 4 employees	35.9	1.1
1 to 9 employees	50.8	2.5
1 to 19 employees	64.8	5.4
1 to 49 employees	77.6	12.6
1 to 99 employees	89.0	20.9
1 to 249 employees	95.6	36.9
1 to 499 employees	98.2	51.4
1 to 999 employees	99.3	65.1
1 to 2,499 employees	99.8	79.3

General statistics (that is, total employment, payroll, production-worker employment, man-hours, wages, cost of materials, value of shipments, inventories, capital expenditures, and value added by manufacture) from the census of manufactures are published by industry, by area, by employment size of establishment, by degree of product specialization within plant, and by type of ownership. Information is supplied on the detailed industrial characteristics of each State and large standard metropolitan statistical area (SMSA); and overall measures of manufacturing activity are shown at the county and individual-city level provided there are at least 450 employees in manufacturing and the information can be published without compromising the confidentiality of individual company data. Since a significant amount of industry detail cannot be published for the 3,140 counties and county equivalents in the United States, a special computer tape on "Location of Manufacturing Plants" is available for data users. This tape includes the number of establishments in each of the 450 industries by county or county equivalent area, by employment size. Information such as this constitutes a periodic inventory of the geographic dispersion of the Nation's manufacturing economy that provides a benchmark for measuring the change in its structure.

The census of manufactures also provides benchmarks from which more frequent surveys can be developed on a sample basis. In fact, the present legislation specifying that censuses be conducted every 5 years authorizes an Annual Survey of Manufactures (ASM) on a sample basis during the intervening years. After each 5-year census, a new sample is drawn utilizing the characteristics recorded for each company in the census. The sample, constituting about one-fifth of the establishments but with complete coverage of all large ones, provides an annual updating of the census of manufactures in terms of broad measures of economic activity. It provides the same basic measures of economic activity of the plant such as employment, payrolls, value of shipments, value added by manufacture, as does the census of manufactures, but contains less detailed information on products, materials consumption, and equipment.³

The census of manufactures not only is a benchmark for many of the surveys conducted by the Census Bureau itself on a more frequent basis but also is the means of updating other indicators of economic activity. It provides very important information on the manufacturing segment used in the national income accounts. Census data on materials consumed and product output are basic to the manufactures sector of the

input-output studies of the Bureau of Economic Analysis. The information derived from the census of manufactures is also used to develop indexes of industrial production for census years. These indexes are used as benchmarks for the monthly Federal Reserve Board Index of Industrial Production—a key indicator of current economic activity. The census and ASM also provide benchmarks for hundreds of monthly and quarterly surveys of commodity output conducted by the Census Bureau, other government agencies, and by manufacturers' associations.

4. INDUSTRY AND PRODUCT CLASSIFICATION

Structure of the Standard Industrial Classification.—The basic classification system employed in the economic censuses is the Standard Industrial Classification (SIC). The SIC was developed for use in the classification of establishments (see "Establishment Basis of Reporting," page 9) by type of activity in which engaged. It covers the entire field of economic activities, subdivided as follows:

Industrial division	Title	Major groups
A	Agriculture, forestry, and fisheries	01-09
B	Mining	10-14
C	Contract construction	15-17
D	Manufacturing	20-39
E	Transportation, communication, electric, gas, and sanitary services	40-49
F	Wholesale and retail trade	50-59
G	Finance, insurance, and real estate	60-67
H	Services	70-89
I	Public administration	91-97
J	Nonclassifiable establishments	99

Below the major group level, the SIC provides for 3-digit groups and finally for 4-digit industries. To illustrate—

Division D.—Manufacturing

Major Group 20	Food and kindred products
Industry group 202	Dairy products
Industry 2023	Condensed and evaporated milk

The SIC is the responsibility of an intragovernmental technical committee headed by the Office of Management and Budget. The system is used by all Federal Government agencies engaged in the classification of establishments. To

³ Since the ASM is based on a sample, the cross-classifications by industry and by area are fewer than in the census of manufactures. At the U.S. level, statistics are published in the annual survey for practically all of the 450 industries. However, at the State and SMSA levels, statistics are published only for 3-digit and 2-digit industry groupings, respectively. At the county level, information is published for about 10 percent of the 3,140 counties and equivalent areas. These 300-odd counties are the larger ones in terms of manufacturing activity and account for about 80 percent of total manufacturing employment. Data for cities are shown for those cities having over 20,000 manufacturing employees.

facilitate comparison with Federal statistics and the filing of reports, many State and local governments and business concerns organize their own records along SIC lines.

The first SIC manual was issued in 1939. For the manufacturing sector, the nucleus of the manual was the census of manufactures industry classifications developed over a period of many years. A revised manual was issued for the manufacturing industries in 1945 which, with minor modifications, was used in the 1947 census of manufactures. For the 1954 census, the classification structure used in 1947 was again employed, with minor modifications. In 1957, the SIC system was extensively revised for manufacturing industries and the historical comparability of some data was seriously affected. This revision and its effects on census series are described in the introduction and appendixes to the 1958 census volumes. Minor revisions of the SIC between 1958 and 1967 introduced some 4-digit industry changes but none of them crossed 3-digit group lines. Another extensive revision of the SIC was completed in 1972 which also affected the comparability of industry data. The discussion of the revisions and the impact on comparability appears in appendix B, as well as in parts of each individual industry chapter.

Structure of the SIC Manufacturing Division.—For the manufacturing division, the 20 2-digit SIC Major Groups (20 to 39) are subdivided into 143 3-digit SIC Groups (201 to 399) and into 451 4-digit industries (2011 to 3999). While the SIC contains 451 industries, the Bureau of the Census has combined one small industry with another for a total of 450 industries.

Most of the 451 manufacturing industries are defined in terms of specific groups of related products. Usually the products are made of similar materials and by similar processes and are competitive. In determining the boundaries of product-defined industries,⁴ it is essential that each industry comprise a group of establishments whose output of products defining the industry (primary products) accounts for a relatively high proportion of the total shipments of the industry as well as of the total shipments of these primary products by establishments in all manufacturing industries. Some industries are defined in terms of the processes or equipment used regardless of the final product of the establishment. (Example: Industry 3361, Aluminum Foundries (castings). A small number of industries are basically defined by material used as well as final product of the plant. (Example: Industry 2521, Wood Office Furniture).

There are wide differences among industries in the extent to which the establishments classified in the industry (a) account for the total production of commodities "primary" to the industry, (b) produce products or services "belonging" to other industries (that is, secondary products), and (c) use similar materials or processes. While these variations are frequently construed to be shortcomings, the fact is that the limitations observed in the classification structure arise from the inherent complexity of our economic system and from the disparity in the methods of production among the individual producing units of which it is comprised. The data collected in the census of manufactures provide a statistical basis for a critical evaluation of the classification system; that is, for assessing the boundaries between industries, the growth and decline of industries, and the impact of technological change on the classification of industries.⁵

No general-purpose system of industrial classification can hope to satisfy all users of census data. Some business users will be interested primarily in data relating only to themselves and to their competitors in the production of a narrow range of products; others will wish data relating to all products, including complementary and substitutable products, competing in a particular market; others may wish data relating to the consumers of one or more types of materials. Some may be interested only in the data for plants producing a specific product; others only for those plants producing a "full line" of products. The large number of SIC industries provides the analyst with the "building blocks" for obtaining useful approximations, if not "clean" data, relevant to many of these problems. But, at best, a single general-purpose system of classification can only partially satisfy these diverse needs; a point is soon reached beyond which the adaptation of a system to serve one use somewhat better will reduce its ability, often disproportionately, to serve an alternative use.

Accordingly, users of data frequently regroup detailed SIC industries into broad groupings along lines different from those in the SIC 2- and 3-digit categories. The Federal Reserve Board for many years has made combinations to stress such criteria as durable, nondurable, consumers, producers, finished, intermediate goods, etc. Other public and private agencies also recombine the detailed classes. By and large, the 4-digit industries are susceptible to allocation to such categories, while the 2-digit SIC groups are not.

Subindustries.—To increase the usefulness or improve the editing of the data, the Census Bureau frequently has further classified the basic 4-digit SIC industries into "subindustries." This device is employed where there are wide disparities in the

⁴ Frequently, business analysts and other data users look at a group of products from more than one point of view. For example, modern high-speed computers are classified as office machines. This describes the purpose of the product. In a physical sense, however, such computers would be described as electronic devices. Similarly, paper bags, wooden boxes, glass bottles, tin cans, and steel barrels may all be classified as containers or they may be individually grouped with other products of similar materials such as converted paper products, wood products, glass products, etc.

⁵ See "Industry Classification and Sector Measures of Industrial Production" by James W. McKie, Bureau of the Census Working Paper No. 20, 1965, and "Historical Comparability of Census of Manufactures Industries, 1929-1958" by Harold T. Goldstein, Bureau of the Census Working Paper No. 9, 1959.

operating ratios of the plants in the industry because of differences among plants in the degree of vertical integration, technology, methods of distribution, geographic location, types of materials used, etc. This technique was used for about 61 manufacturing industries for editing purposes and many were regarded as significant enough to be used for publication: For example, the bakery industry (SIC 2051) is subdivided into wholesale bakeries, chain-store bakeries, home-service bakeries, and retail multioutlet bakeries, and many apparel industries (Group 23) are subclassified into manufactures, contractors, and jobbers.

To provide a further measurement of variations within 4-digit industries, the Bureau also subclassifies establishments by the degree to which they produce the primary products or specific classes of primary products of the 4-digit industry. This is in effect a subindustry classification based on degree of product specialization which is published in table 5A of the industry chapters.

Definition of Manufacturing.—As defined in the SIC, manufacturing is the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment.

Manufacturing production is usually carried on for the wholesale market, for transfer to other plants of the same company, or to the order of industrial users rather than for direct sale to the household consumer. However, some manufacturers (for example, baking, milk bottling, etc.) sell chiefly at retail to household consumers through the mail, through house-to-house routes, or through salesmen. Some activities of a service nature (enameling, binding, platemaking, etc.) are included in manufacturing when they are performed primarily for trade; but they are considered nonmanufacturing when they are performed primarily to the order of the household consumer. On the other hand, some manufacturing industries include business firms which perform only the entrepreneurial functions of buying the materials and designing and marketing the product, but have the actual production done on contract (for example, apparel jobbers).

Auxiliary Units.—In addition to the production of goods and manufacturing services, manufacturing plants engaged in related and diverse supporting activities. These activities encompass the acquisition of materials to be processed, their movement into the manufacturing facility, their storage at the manufacturing site, the operation and maintenance of plant and equipment, the design of flow of work through the production process, and necessary arrangements for shipment of output to customers. Also included are a host of subsidiary

activities associated with the operation of the establishment as a manufacturing entity (for example, management and policy formation, product and market orientation, engineering and quality control, recordkeeping and accounting, physical security of plant and equipment, and the like). Such subsidiary activities may be performed by personnel located at the manufacturing facility or at an auxiliary unit serving one or more manufacturing locations of the same company. Where these activities are carried on at a different physical location or are performed for more than one plant, they are excluded from the figures for operating manufacturing establishments and are included in the data shown for central administrative offices and auxiliaries. (See the description of the questionnaire used for these establishments, Form NC-X6, in section 7, below.)

Marginal Activities.—The following types of activities, while having some of the characteristics usually found in manufacturing, are considered as nonmanufacturing and, therefore, are excluded from the census:

(a) Processing on farms when the raw materials are grown on the farm and the manufacturing activities (poultry dressing, milk and butter production, logging) are on a small scale without extensive use of paid labor. Also custom milling, egg hatching, cotton ginning, and similar activities closely associated with agriculture are excluded.

(b) Mineral preparation such as the crushing, screening, and concentrating of ores. However, mining performed as a secondary activity in conjunction with manufacturing is included in the census unless a separate report for the mining activity was filed; for example, stone and clay mining at cement, lime, and clay products plants.

(c) Custom work to the individual order of household consumers. Examples are custom tailoring, woodworking, lettering on monuments, setting of diamonds, and the making of orthopedic appliances.

(d) Repair and other service activities, except specified services performed "for the trade." Repair shops of railroads are also excluded.

(e) Production of coke for own use by establishments owned by public utility companies.

In the 1972 census, no attempt was made to measure the extent of manufacturing at locations which are not primarily manufacturing plants, such as retail establishments which sell most of their products on the premises directly to household consumers (retail bakeries,⁶ ice cream stores, etc.), or manufacturing by construction contractors at the site (for example, production of paving mixtures).

⁶ Separate data for retail bakeries with baking on the premises were included in the retail census publications, however.

Conversely, it is not unusual for manufacturing establishments to engage also in nonmanufacturing activities such as repair work, merchandising of products without further processing, and installation work. Ordinarily, these nonmanufacturing receipts are small in relation to the manufacturing activities and, therefore, it is not difficult to determine that the establishments should be included in the manufactures area. However, if the nonmanufacturing activities account for a significant proportion of total receipts of an establishment, the classification of that establishment into the appropriate major economic sector is more difficult.

In the 1972 economic censuses, an establishment engaged in a combination of manufacturing and merchandising was assigned either to the manufacturing or the trade industries depending on which of these activities was estimated to account for the larger share of its "value added" or "income produced." This criterion, even though based on approximation, was considered preferable to reported dollar volume of receipts from each type of activity in determining the primary industry, since manufacturing requires considerably more man-hours, salaries and wages, and capital inputs per dollar of receipts than either wholesaling or retailing. However, in classifying establishments engaged in manufacturing and also in mining, repair work, installation, construction, or other nonmanufacturing services, dollar receipts were used as the basis of classification because these activities require substantially comparable input per dollar of receipts.

Establishment Basis of Reporting.—The SIC is an establishment classification system, and the census of manufactures is conducted on an establishment basis. That is, a company operating establishments at more than one location is required to submit a report for each location; also, a company engaged in distinctly different lines of activity at one location is required to submit separate reports if the plant records permit such a separation and if the activities are substantial in size.

The requirement that distinct lines of activity at the same location be separately reported was selectively applied where the establishment produced and shipped significant amounts of products classified in different SIC industries. In widely varying degrees, this product overlap exists in many manufacturing establishments. Generally, the amounts involved are not significant enough to warrant the filing of separate reports, even if feasible. However, there are a number of locations at which large numbers of employees are engaged in each of two or more distinct lines of manufacturing as defined in the SIC. Frequently, companies organize their operations and their records separately where diverse activities are large (for example, with more than 100 employees in each line of activity) and choose to report them as separate plants. When they do not do so on their own initiative, the Census Bureau requests separate reports. For the most part, companies have

responded favorably, particularly for very large operations where failure to "split out" the different activities would significantly distort the relationship of the industry and product statistics. Not infrequently, though, the two groups of products were made on the same production lines by many of the same employees and could not be distinguished sufficiently in company records to provide establishment-type reporting.

SIC industry definition takes account of special situations where otherwise separately classifiable activities are frequently combined at one location. For example, in the lumber area the definition of industry 2421, Sawmills and Planing Mills, General, recognizes the situation that sawmills may include logging operations. Similarly, in the pulp and paper area, pulpmills operated in combination with papermills are included in one report.

Coverage of Establishments.—The censuses of manufactures for 1947 to date have included establishments with one employee or more. Beginning with the 1967 census, reports were not obtained directly from all such establishments. Approximately 120,000 small single-unit manufacturing firms⁷ identified as having less than 10 employees were excused from filing reports. Under special arrangements which safeguarded the confidentiality of both tax and census records, limited data on payrolls, sales, and industry classification from the administrative records of the Social Security Administration (SSA) and the Internal Revenue Service (IRS) were made available to the Census Bureau for use in the 1967 and 1972 economic censuses. Estimates for data other than payrolls and sales for these small establishments were constructed from historical industry ratios. The effect on industry aggregates is slight in most industries; for manufacturing as a whole, they account for only 1.2 percent of the value added. Detailed product and materials data for these small establishments were not estimated; the entire value of product shipments and cost of materials was imputed to a "not specified by kind" category.

In the censuses of 1921 through 1939, establishments with less than \$5,000 value of products were excluded. For 1899 to 1919, the limit was \$500. The change in the minimum size limit to an employment basis in 1947 did not appreciably affect the overall comparability of earlier census figures, except for the number of establishments.⁸

A sample survey of manufacturing plants with no paid employees was conducted in conjunction with the 1958 census. While there were nearly 52,000 establishments in this category in that year, they accounted for only about one-quarter of 1 percent of the total value of shipments of all manufacturing industries. The proportion was higher for certain industry groups such as lumber and wood products and printing and

⁷ The characteristics of these firms are discussed below in section 15.

⁸ This point is discussed at greater length in the Introduction to the 1947 volumes.

publishing. Tabulation of IRS data for 1972 indicates that there were 104,000 tax returns completed as manufacturing that had no payrolls under SSA standards. These accounted for a little over one-quarter of 1 percent of the total value of shipments for all manufacturing industries.

As indicated above, report forms were not mailed to 120,000 very small establishments. These establishments were assigned the industry classifications to which they had been coded in the 1967⁹ Census of Manufactures if they had been in business for that year, or if they had begun in business after 1967 they were coded on the basis of brief descriptions of the general activity of the establishment as reported to the Social Security Administration. Where the description is incomplete or there are relatively fine lines of demarcation between industries or between manufacturing and nonmanufacturing activity, the code assigned to an establishment could differ from that which would have been assigned on the basis of more complete product information. Therefore, the total establishment count should be viewed as an approximation rather than a precise measurement. The counts for establishments with 20 or more employees are far more reliable than the total number of establishments.

Primary and Secondary Products.—As applied in the economic censuses, the SIC coding system operates in such a way that the definitions become progressively narrower with successive additions of numerical digits. There are 20 very broad 2-digit groups, 143 3-digit groups, and 451 4-digit industries. In addition, the Census Bureau has developed a product coding system based on the SIC, which contains 1,293 5-digit product classes and approximately 10,500 individual 7-digit products. (See "The Classification of Products and Materials" below.) The 7-digit products and 5-digit product classes are considered the primary products of the industry with the first four digits the same as the product code. Accordingly, an establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value its production of products of any other single industry. The industry code assigned to the establishment is derived from a summation of values for 7-digit product codes to their 4-digit industry and the selection of the largest such value as the establishment's industry classification. However as mentioned earlier, the industry classification of an establishment may be determined not only by the products it makes but also by the processes employed or materials used in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in an industry specialize to this extent. Therefore, the general statistics (employment, pay-

rolls, inventories, value added by manufacture, total value of shipments, capital expenditures, etc.) shown for an industry (tables 1 to 4 of the industry chapters in Volume II) reflect not only the primary activities of the establishments in that industry but also their activities of a secondary nature. The product statistics in tables 5A and 6B of the industry chapters represent the total output of specific products whether they are produced by establishments classified in the same industry as the product or not. For this reason, in relating the industry statistics in the industry chapters, especially the industry total value of shipments (tables 1 to 4), to the product statistics (table 6), the composition of the industry's output as shown in tables 5B and 5C should be considered.

The extent to which industry and product statistics may be matched with each other is measured by the two ratios which are computed from tables 5B and 5C. The first of the ratios, called the primary product specialization ratio, describes the proportion of product shipments (both primary and secondary) of the industry represented by primary products. The second, defined as the coverage ratio, is the proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

Degrees of Integration.—In many industries, establishments making products falling into the same industry category use a wide variety of processes and materials to produce them. Also, within the same industry classification based on end products, those establishments may be included which are vertically integrated and those which put only the finishing touches on an already highly fabricated purchased item. For example, in the refrigeration industry, there are instances of almost complete process integration in which the production of the compressor and condensing unit, electric motor, and even the castings for those intermediate products, as well as the stamping of the case and the final assembly, are all carried on at one plant. In other plants, the condensing unit, the motor, and the case may be purchased and merely assembled into the finished product.

In some instances, nonintegrated plants have been placed in separate industry categories from the integrated plants. In many industries, the census provides separate statistics on departmental operations or on the production of intermediate commodities made and used in the producing plant. When an industry includes plants which ship a significant proportion of their output to other plants of the same company, separate figures are usually shown on the interplant transfers.

These differences in the integration of production processes, types of operations, and types of materials used should be taken into account when relating the general items (employment, payrolls, value added, etc.) to the product and materials data. For those industries where the integrated type of operations is of consequence, that fact is pointed out in the explanatory text for the industry.

⁹ Establishments which were in the 1967 Administrative Record File would have been assigned industry codes from the 1963 Census of Manufactures.

Industry Code Resistance.—The production of many establishments is so evenly divided among two or more industry-determining product groups that the predominant groups (which can represent less than half of the total value if there are three or more groups) change from year to year. In the ASM, these plants are prevented from shifting back and forth among industries due to minor shifts in product mix, by the application of a "resistance formula" in assigning industry classifications.

A resistance formula of the ASM type was first used in the 1963 Census of Manufactures and again applied in the 1967 census. In the 1972 census, the formula was applied only to establishments included in the 1971 ASM sample panel with certainty (that is, included with a probability of "1"). In general, certainty cases included all establishments of companies with at least one manufacturing plant with 250 employees or more.

The formula gives approximately equal weight to the need for maintaining continuity in the establishment composition of an industry, thus improving the measurement of change and the need for reflecting the industry's exact status at a point in time.

In the 1972 census, the industry classification of certainty establishments was allowed to change from that assigned in 1971 under one of the following conditions:

- (a) The value of the 1972 primary products constituted 60 percent or more of its total value of product shipments, or
- (b) The value of the 1972 primary products, while less than 60 percent, was at least twice the value of products which had been primary in 1971.
- (c) The value of 1972 primary products, while not meeting either of the two prior conditions, exceeded the value of the 1970 primary industry's products in both 1972 and 1971 by at least 20 percent.

The Classification of Products and Materials.—In census industrial statistics, a commodity classification system based on the SIC is employed. The code numbers used in this system relate the commodity to the industry in which it is produced. For example, the 7-digit product code number 2023212 refers to canned evaporated milk. The first five digits of this code number, 20232, refer to the "product class" canned milk, and the first four digits, 2023, refer to the industry in which these products are made (the condensed and evaporated milk industry). The system is also applied to the coding of materials insofar as the first four digits are concerned; for example, the code number 024111 refers to whole milk used as a material, and the first four digits of this code number 0241, refer to the agricultural industry, dairy farms, where this product originates.

This SIC-based system is simpler than other systems for the coding of industrial products and materials used, since there is a direct numerical relationship between commodities and industries. Complications occur in the few SIC industries defined in terms of processes or equipment used as well as products made. As an example, women's sweaters are produced in knitting mills (industry 2253) and also in cut-and-sew shops (industry 2339). To retain the industry-of-origin concept, therefore, it is necessary to assign different product code numbers to women's sweaters, depending on where they are made.

The SIC-based commodity classification is used in the Census Bureau's entire industrial statistics program, including monthly, quarterly, and annual surveys, and also in the census of wholesale trade. The Bureau also publishes data on imports and exports in terms of SIC-based categories as well as the traditional Schedule B and TSUSA systems.¹⁰

5. GEOGRAPHIC CLASSIFICATION

Census Divisions and Regions.—In order to present census data at a level intermediate between the U.S. total and those for the individual 50 States and the District of Columbia, the Census Bureau has used regional groupings for over a century. Since the 1909 Census of Manufactures, the present nine geographic divisions have been used. Beginning with the 1939 census, the nine divisions were also classified into four geographic regions: Northeast, South, North Central, and West.

Not only are these groupings convenient for the summary presentation of census data below the U.S. level, but they are also essential to presenting a maximum of geographic information where the individual State data cannot be shown without disclosing figures for individual companies. (See section 22, "Confidentiality".) The relative importance of manufacturing among the regions, divisions, and States is shown in table F.

Standard Metropolitan Statistical Areas.—In addition to the data for the legally constituted geographic units (States, counties, and cities), all manufacturing totals are shown for approximately 263 standard metropolitan statistical areas (SMSA).¹¹ In the 1972 tables, detail for 2-, 3-, and 4-digit industries is shown for any SMSA when it would not disclose data for individual companies and the industry had at least 250 manufacturing employees. This is the same procedure as that used in the 1967 census. Prior to 1967, detail had not been shown for SMSA's with under 40,000 total manufacturing employment, and only industry group figures were

¹⁰Schedule B is the U.S. export classification while TSUSA is applied to imports.

¹¹See appendix F for a description of each SMSA.

INTRODUCTION—Continued

TABLE F. Value Added by Manufacture for Regions, Divisions, and States: 1972

Region, division, and State	Value added by manufacture (mil. dol.)	Percent of U.S. total	Region, division, and State	Value added by manufacture (mil. dol.)	Percent of U.S. total
United States, total	353,994.0	100.0	South Region—Con. South Atlantic Div.—Con.		
Northeast Region	92,839.1	26.2	Virginia	6,177.5	1.7

shown for SMSA's with 40,000 to 190,000 employees. Between 1967 and 1972, a significant number of SMSA's were redefined in content or became new SMSA's. These changes are discussed in appendix E.

Standard metropolitan statistical areas are integrated economic and social units with a large volume of daily travel and communication between the central city (having 50,000 or more population) and outlying parts of the area. Each area (except in New England) consists of one whole county or more. An area may contain not only highly industrialized

counties but also adjoining counties which, though primarily residential in character, contribute significantly to the industrial counties' labor force and are socially and economically integrated with the central city. These areas were defined by the Federal Committee on Standard Metropolitan Statistical Areas for general-purpose use in presenting economic and social data. In the New England States, similar integration criteria have been applied in defining standard metropolitan statistical areas, but on a city and town basis because towns are regarded as the significant unit in this region of the country.

TABLE G. The 50 Largest SMSA's Ranked by Value Added by Manufacture: 1972, 1967 and 1963

Standard metropolitan statistical area	Number of employees (thousands)	Value added by manufacture (mil. dol.)	1972 rank	1967 rank	1963 rank	Standard metropolitan statistical area	Number of employees (thousands)	Value added by manufacture (mil. dol.)	1972 rank	1967 rank	1963 rank

Note: The Flint, Mich., SMSA falls within the top 50 SMSA's but is excluded from this table to avoid disclosing figures for individual companies.

— Represents zero. *The definition of this SMSA changed for 1972. See appendix F for a description of each SMSA and changes in content.

The requirement that each SMSA consist of county units (except in New England) sometimes results in the inclusion in an area of a considerable amount of territory which would not ordinarily be considered "metropolitan," much less "industrial." It is recognized that metropolitan areas could be more accurately defined in terms of smaller area segments such as minor civil divisions, but the usefulness of areas so defined

would be limited by the fact that many types of economic and social data are available only on a county basis.

Each SMSA is designated by the name of the principal city of the area. In addition to the name of the principal city, the area title may include one or two additional city names.

Value added by manufacture in all SMSA's accounted for 78 percent of the U.S. total in 1972. The relative importance

of the 50 largest SMSA's in 1972 and their rankings in the 1967 and 1963 censuses are shown in table G.

Industrial Counties.—In addition to industry statistics for standard metropolitan statistical areas, table 7 of each State report, presents data by county for each industry group (2- and 3-digit) that had at least 450 manufacturing employees

and where it would not result in disclosure of figures reported by individual companies.

Cities with 450 Manufacturing Employees or More.—Summary totals and industry detail at the 2-digit level are shown for individual cities with 450 manufacturing employees or more, provided the data do not disclose information for individual companies.

II. METHODS

6. PLANNING AND PREPARATION

General.—The Census Bureau has an obligation to meet public needs for timely and reliable information while holding costs and the burden on respondents to a minimum. During the planning stages of each economic census, the advice of trade and professional associations, Federal and State government agencies, individual companies, labor unions, and research and educational organizations is solicited in an effort to reach both the users of data and the respondents who supply the basic figures. Simultaneously, studies of the problems encountered in the previous censuses are undertaken, and proposals to improve the methods of collection, processing, and tabulation are explored.

Mailing Lists.—Beginning with the 1954 economic censuses, the basic mailing lists have been obtained from Internal Revenue Service (IRS) and Social Security Administration (SSA) records.^{1 2} These records were also sampled to develop statistics for retail and service establishments with no employees. After the 1963 censuses, it was decided to investigate the feasibility of making greater use of the data in the IRS-SSA records. This effort led, in the 1967 censuses, to the exemption of over 2,000,000 firms from the filing requirement, including 120,000 small manufacturers. Instead, census-type statistics for this group were developed from IRS-SSA records. Well in advance of the data collection phase of the censuses, plans for using these records for small employers were developed in close cooperation with those agencies. Specific procedures for this use and for assuring confidential treatment of individual tax returns were set forth in Executive Order No. 10911, dated January 17, 1961, and Treasury Decision No. 6547 of the same date. The basic records used were business income tax returns (IRS forms 1040C, 1065, 1120, and 1120S) and payroll tax returns (IRS form 941). The information obtained from these reports was the name and address, payrolls, and gross business receipts. In addition, an SIC indus-

trial activity code was assigned by use of the permanent SSA records which indicate the industry or kind of business of each employer. Other census statistics for these small firms were imputed, using industry average ratios to payrolls and sales.^{1 3}

Since the 1967 procedure was successful, it was repeated in the 1972 economic censuses. In 1972, there was a concerted effort by the Census Bureau to improve the industry coding of the administrative record by mailing a nature-of-business inquiry to establishments whose industry codes could have been affected by the 1972 revision to the SIC. (A sample classification card is reproduced in appendix C.)

Planning the Content of Questionnaires.—As in previous censuses, the content of the 1972 questionnaires was developed in consultation with a large number of organizations and individuals, representing both the manufacturers who supply the basic data and those who use the resulting statistics. Those consulted included government agencies, individual firms, labor unions, the American Statistical Association, the American Economic Association, the American Marketing Association, the National Association of Manufacturers, and all national manufacturers' associations covering specific industries.

A special effort was made to obtain the advice of individual manufacturers and their trade associations as to the content of the sections of the report forms dealing with the output of specific products. Drafts of the proposed 1972 product sections were circulated among 800 trade associations and about 4,000 manufacturing companies, both large and small. These inquiries followed the pattern of the 1967 census inquiries, with the introduction of new product detail reflecting suggestions received by the Census Bureau after the 1967 canvass. Small items (those valued at \$5 million or less) were not retained in the list unless they were needed to simplify the classification of other products or were of strategic importance. The manufacturers and others consulted in this clearance procedure were requested to comment particularly as to whether

^{1 2} The 1947 Census of Manufactures list was also obtained from the SSA.

^{1 3} As discussed elsewhere in this introduction, the amount of imputation introduced by this procedure was only about 1 percent of the overall totals.

the proposed detail was readily reportable from business records, and whether it represented the most appropriate set of items for the industry. A restriction was placed on proposals for additional detail; it was stipulated that the 1972 value of any new product category should exceed \$20 million.

The thousands of comments and suggestions received in this clearance procedure were analyzed by the census staff. Finally, a detailed account of the review procedure and the decisions reached was forwarded to the Office of Statistical Standards, Office of Management and Budget, along with the Census Bureau's recommendations for the content of the product sections.

The final review of the content was performed by the Office of Statistical Standards with the assistance of the Advisory Council on Federal Reports. The latter organization is a group of business executives representing a cross section of industries and various professions within companies such as controllers, economists, and market research directors.

7. REPORTING FORMS

A representative selection of the reporting forms used in the census is reproduced in appendix C. The uses of each of them are discussed below.

General Forms.—This group of forms was used in the economic censuses generally, either as companywide reports or as reports for establishments whose classification was not known precisely in advance of mailing.

NC-X1A, Report of Company Organization.—This companywide report and its companion forms NC-X1B and NC-X1C were used in the prec canvass of multiunit companies conducted in 1972. A more detailed account of their use is given in section 8, "The Mailing Lists."

NC-X2, Listing of Additional Establishments.—This form was mailed to all multiestablishment companies together with the 1972 Census of Manufactures forms to obtain a list of establishments that were acquired after the NC-X1A was filed. These plants were then classified, added to form NC-X1A, and mailed report forms. Plants under construction were requested to report expenditures put in place during 1972 and the total gross book value of assets at the end of the year.

NC-X3, General Schedule.—This questionnaire was designed to obtain information from small companies for which the industry code available in the SSA records was not precise enough to indicate which one of the standard census questionnaires should be mailed. The information provided on form NC-X3 was used to classify these companies by industry and tabulate their data in the appropriate census.¹⁴

NC-X6, Central Administrative Offices or Auxiliary Establishments.—Many multiunit companies maintain separate establishments to provide centralized administrative, management, or other supporting services for other establishments of the same company, but not for the general public or other companies. These establishments were asked to complete form NC-X6. The form contained questions on approximate employment for such functions as centralized administration, research and development, warehousing, and other auxiliary activities, and on the cost of research and development work performed by these nonmanufacturing establishments.

NC-K1, Company Summary Report.—Each multiunit company with 250 employees or more received a form NC-K1, Company Summary Report, along with the appropriate questionnaires for its establishments. The NC-K1 requested consolidated company totals for key data items, such as receipts, new capital expenditures, inventories, and fixed assets. In addition, each company was asked to distribute the 1972 employment reported on its establishment questionnaires by its IRS-SSA employer identification numbers (EI numbers) and to compare these totals to the figures reported on its Treasury Form 941 tax returns. This comparison provided assurance that all domestic establishments of each large multiunit firm and its subsidiaries would be included in the censuses. Form NC-K1 served this operational purpose and also provided essential data for the enterprise statistics program described above in section 1.

Census of Manufactures Forms.—The questionnaire reproduced in the appendix, form MC-36B, is typical of the 180 forms used for operating manufacturing establishments. Each of these forms was designed to be used for a specific group of industries. For establishments included in the Annual Survey of Manufactures sample, form MA-100 was substituted for the front sheet of form MC-36B and its companion forms, since the content was virtually the same and it was desired to maintain continuity of reporting in the ASM. Whether or not form MA-100 was used, the inquiries on the 180 forms were identical except for the detailed questions on products shipped, materials used, and miscellaneous topics such as operations performed, equipment used, and delivery of products.

Annual Survey of Manufactures Forms.—Form MA-100 is the establishment report used in the ASM since 1949 (with modifications). As mentioned above, this form was used in 1972 as the first sheet of the census of manufactures report for the establishments included in the ASM sample. The establishment's 1971 data were imprinted on the report form before mailing, thus aiding the respondent in following the instructions for the census. Item 9, "Quantity and value of products shipped and other receipts," on form MA-100 corresponds to item 18 on the census form MC-36B and its companion forms,

¹⁴ The use of Form NC-X3 is also discussed in section 8, "The Mailing Lists."

the difference being that item 18 called for more detailed information on product shipments.

Other Related Forms.—Form CB-51J, "Manufacturers' Sales Branches and Sales Offices," which is reproduced in appendix C, is typical of the several forms used for these establishments in the census of business. The forms differed only in the kinds of products sold as listed in item 12. In item 5, line b provided verification of the classification of the establishment as a sales branch or sales office. If the line-b percentage indicated that more than half of the goods sold were not manufactured by the parent company, the establishment was reclassified into one of the merchant wholesaler categories.

MC-171, Department of Defense Establishments, and MC-D4, Penal Institutions.—These forms were used to collect information on government-owned and government-operated manufacturing establishments. They were used for two types of establishments: (1) Manufacturing facilities owned and operated by the Department of Defense, and (2) prison industries (Federal, District of Columbia, and State). The data were prepared with the cooperation of the Department of Defense, the Department of Justice, and the District of Columbia and State prison systems. For Department of Defense installations, information was provided on employment, man-hours, payrolls, cost, and value of work done, by industry group and by State. For prison industries, however, only product data were requested. The data are presented in a special report included in Volume I and are not included in the totals for operating manufacturing establishments.

8. THE MAILING LISTS

General.—As discussed in section 6 above, the basic lists for 1972 were obtained from IRS-SSA records, supplemented importantly by the inclusion of the ASM list of 68,000 establishments. Since the IRS-SSA lists consist essentially of the names and addresses of companies rather than establishments,¹⁵ it was necessary to follow separate procedures for multiunit companies (those operating at more than one location).

The Precanvass.—Multiunit companies were required to file at least one establishment report¹⁶ covering each location. In order to select the appropriate questionnaires, it was necessary

to determine in advance the nature of operations at each location. Beginning early in 1972, therefore, a "Report of Company Organization" (forms NC-X1A, NC-X1B, and NC-X1C)¹⁷ was obtained from firms known to be multiunits from previous census records. Form NC-X1A was mailed to all of the larger multiunit companies. Form NC-X1B was mailed to multiunit companies operating under 4 or less employer-identification numbers and having 13 or less operating establishments. Form NC-X1C was mailed to multiunit companies which were operating under one employer-identification number, having 4 or less operating establishments and a total employment of 100 or less.

All of these forms consisted essentially of a report on company affiliation and a list of the domestic establishments operated by the company. Before the forms were mailed, the company's establishments as identified in census records were prelisted. In the instructions for form NC-X1A, the respondents were asked to make any necessary corrections to this list. In addition, they were asked to supply descriptions of any new establishments not already listed, including their approximate size.

Large multiunit companies were segregated for special handling in the prec canvass because problems involving overlap and duplication were anticipated. Many of these companies were active in retail and wholesale trade as well as in manufacturing. The instructions for the prec canvass were reviewed with these firms in personal discussions with officials of their accounting departments, in order to make certain that the procedure was understood and the establishments properly described on form NC-X1A.

Initial Control File.—This file, consisting of about 10 million names and addresses of companies, was assembled from IRS-SSA records and other sources including the 1972 economic census records. For manufacturing, the ASM records were incorporated in the file.

Single-Unit Companies.—The mailing lists for single-unit companies (those operating at only one location) were developed from the initial control file by removing out-of-scope companies (those whose activities were not to be surveyed in the economic censuses) and those identified as multiunits in the prec canvass. A special survey of out-of-scope companies with more than 50 employees in selected industries was conducted to doublecheck their eligibility, and some names were added to the mailing list as a result. Single units with over 150 employees were mailed form NC-X1B to determine if they were multiunits.

The final step was to set aside the records of the small companies for which census-type statistics were to be developed from administrative records. The remaining records constituted the mailing lists for single-unit companies.

¹⁵ The SSA records for multiunit companies identify "reporting units," which in many instances correspond to census establishments. The differences are such, however, that it was found necessary to obtain up-to-date lists of establishments as described in this section. Also, the Census Bureau concept of a company differs from the IRS-SSA definition, since the Census company includes all establishments under common ownership or control; in the IRS-SSA records, subsidiary corporations are often treated as independent companies.

¹⁶ If two or more distinct lines of activity were carried on at one location, separate reports were obtained under some circumstances. (For a complete discussion, see "Establishment Basis of Reporting" in section 4, above.)

¹⁷ These forms are reproduced in appendix C.

Classification cards (a sample form is reproduced in appendix C) were mailed to the administrative record cases if their historical code was involved in the 1972 SIC revision. Each establishment was requested to describe on the questionnaire the products manufactured or activity performed at their plant, the establishment was then classified according the response received. If a response was not received, the establishment was reclassified to the most probable industry.

General Schedule.—While the lists assembled in these ways were generally adequate in providing sufficient industry information to determine the proper form for mailing, a number of the records did not have precise industry information associated with them. Form NC-X3, "General Schedule," which is reproduced in appendix C, was mailed to all such companies. Since it was assumed that these companies were quite small, only a few key figures were requested. On the basis of the information reported, these reports were coded and included in the basic tabulations. If form NC-X3 indicated that the company was actually large, it was later requested to file one or more of the appropriate standard questionnaires.

9. GEOGRAPHIC AREA CODING

Accurate and complete information on the physical location of each establishment is required in order to tabulate the census data by standard metropolitan statistical areas, counties, and cities. As in previous censuses, the post office address and ZIP code of the establishment were not always accepted as defining the physical location, but respondents were required to describe the actual location in terms of street address, city, town or village, county, and State. For establishments located in rural territory, the name or number of the nearest highway was requested and the distance from the nearest town or other urban place.

In censuses prior to 1963, clerks assigned geographic code numbers to each establishment based on the description furnished by the respondent. This process was slow and required careful verification. Beginning with 1963, a computerized system was developed which assigned an area code number and a prefix symbol to the mailing address before the questionnaires were mailed. The prefix symbol indicated whether or not the mailing address was clearly acceptable as describing the physical location. If there was any question about its acceptability, the respondent's description was later carefully reviewed after the questionnaire was received. The assignment of tentative code numbers by the computer was based on extensive reference files containing nearly a million business names and addresses.

The geographic coding system used in the 1972 economic censuses was based on the 1967 system with some improvements and revisions. The major changes included updating and

expanding the address reference file and the use of new techniques in coding and unscrambling addresses against the reference file.

10. DATA COLLECTION

General.—Although the greater use of administrative records in 1972 substantially reduced the number of companies canvassed directly, there remained nearly 2 million which were required to file, including about 192,000 manufacturers. The assembly of several hundred different questionnaires into mailing packages, correctly labeled and coded, combined with the correct instruction booklets, was an extensive operation.

Instructions.—Several general instruction booklets were prepared to assist respondents in completing questionnaires for the 1972 economic censuses. In addition, separate detailed instruction manuals were printed for establishments in a few kinds of business and in certain mineral industries with peculiar reporting problems, as well as for manufacturing establishments reporting on the detailed standard forms.

Timing.—The bulk of the 1972 questionnaires was mailed by mid-January 1973 with a due date of February 15, about 2 months earlier than the corresponding due date for the 1967 censuses. The collection phase was completed in late July 1973, which was about 3 months earlier than the 1967 census.

Followup.—Companies which did not return their questionnaires by the due date had to be reminded that their returns were overdue. A reminder card was used for the first followup, and form letters were used in the four subsequent mailings. Two basic letter formats were used: one for multiunit companies that had returned questionnaires for some but not all establishments and the other for companies that had not responded at all.

In addition to the letters for the 3d, 4th and 5th followups, analysts made telephone calls to the large companies to help with reporting problems and to request that the forms be completed and returned.

The last followup letter was mailed in June 1973. Estimates based on data from administrative records were included in the census tabulations for the relatively small number which had not responded by the closeout date in July 1973. Thus, all companies and establishments included in the original mailing list (except those determined to be inactive during 1972) were represented in the final statistical results, either by actual returns or by proxy returns generated from administrative records. A special effort was made to obtain actual returns from all large firms, so that the volume of business represented by proxy returns was relatively very small.

11. DATA PROCESSING

General.—The editing,^{1 8} coding, and tabulation of data for the five million establishments represented in the 1972 economic censuses was a complicated task requiring extensive advance planning and careful coordination among the Census Bureau's organization subdivisions. Automatic data processing and other advanced techniques were used in all phases to a considerable extent.

Facilities.—In the mail collection phase, the questionnaires were returned by respondents to the Census office at Jeffersonville, Ind., where most noncomputer (that is, clerical) processing operations were performed. The Jeffersonville functions consisted mainly of preliminary screening of questionnaires, carrying on routine correspondence with respondents, keying data on a key-to-disk system, and transmitting the tape encoded data to Washington on a high-speed transmission system. The Washington staff handled computer operations and all operations in connection with the use of IRS and SSA records.

Preliminary Screening.—After they were checked in against control lists and assigned geographic codes, the questionnaires were reviewed clerically to see that they conformed to certain minimum requirements before further processing. In the case of multiunit companies, the sum of employment and payrolls reported on its establishment questionnaires was compared with the control totals reported on form NC-K1, "Company Summary Report." Questionnaires received from ostensibly single-unit firms were reviewed to ascertain whether they had become multiunits through merger or acquisition. All questionnaires were reviewed to see that the entries were legible and keyable and that entries appeared for a number of key items. For manufacturing establishments returns, the key items were payrolls and value of shipments. Questions arising in the screening operation were resolved by writing or telephoning the respondents. Complex problems involving multi-unit companies were either handled by a special task force of experienced analysts in Jeffersonville or were referred to the Washington office.

Computer Editing.—All of the establishment records from the 1972 censuses of manufactures and mineral industries underwent computerized processes of screening and detailed testing of data. While many of these programs were newly devised in 1972 they were largely based on similar programs in use during previous censuses. Average values and tolerance limits for key

operating ratios (for example, cost of materials per dollar of shipments, payroll per employee, production-worker wages per man-hour, etc.) played a fundamental role in the editing process. However, more extensive testing and more sophisticated routines for adjusting data which failed the tests were incorporated into the 1972 programs. The need for computer editing may be judged by the fact that more than half of all 4-digit SIC industries had one or more data cells changed by more than 5 percent as a result of application of these programs.

In the 1972 census of manufactures, nearly 386,000 establishments were initially defined as being potentially in scope of manufacturing establishments. Approximately 55,000 were identified as having no activity in 1972 or actually out of scope of manufacturing. There were approximately 18,000 duplicate establishment records, which were removed. The ending file consisted of nearly 313,000 establishments engaged in manufacturing activities.

In sequence, the computer programs used included a Housekeeping and Screening Edit, a Coverage Control and Matching Edit, a Magnitude Edit, a General Statistics Edit, an Intercard-Intercolumn Edit, a Product and Materials Edit, Duplicate Removal Programs, and various programs of referral and of aggregate testing. These programs are described in outline form below. Also included within this sequence were programs of geographic coding and of industry coding, subindustry coding, and SIC recoding which are described elsewhere in this Introduction.

The *Housekeeping and Screening Edit* was designed to inspect each record for the presence of basic information such as identification numbers, geographic codes, and source codes (that is, ASM, census of manufactures, or census of minerals). This program also included some simple data adjustments, such as the replacement of a missing total by a corresponding sum of detail.

The *Coverage Control and Matching Edit* was a system of programs which checked the consistency of clerically assigned codes with information reported on the ownership status of the establishment. For ASM establishments, the program included matching with the 1971 ASM record file to identify corresponding prior-year records.

The *Magnitude Edit* was designed to test the size of two key items—payrolls and value of shipments. For ASM establishments, these items were compared with the corresponding entries for 1971 and were accepted if satisfactory. If not accepted, the ASM records were channeled through the standard edit which compared payrolls to a historical employment-size code. Payroll figures passing the test were then used, in conjunction with cost of materials, in testing the value of shipments.

When failures in the magnitude tests were encountered, a fixed sequence of attempts to adjust the data were performed,

^{1 8} In data processing, the term "editing" means the review of information collected on questionnaires or from other sources, with the objective of locating and correcting erroneous entries.

which included dividing a reported figure by 1,000 (a common error was the reporting of values in dollars rather than in thousands of dollars as requested), or replacing a total by a sum of detail where these differed.

More than 34,000 establishments were rejected from the combined output of the Housekeeping and Screening Edit, from the Coverage Control and Matching Edit, and from the Magnitude Edit. These rejects were clerically reviewed, corrected where necessary, and recycled back into the computer.

The *General Statistics Edit* tested key operating ratios and adjusted the record or flagged it for later attention if it failed the test. Fifty-two such ratios were assigned for use in testing census of manufactures records, and 41 ratios of change between 1971 and 1972 were used in testing the ASM reports. The tolerance limits and average values for these 93 ratios were based on the limits used for the corresponding tests in the 1967 census, with some correction and updating based on the 1971 ASM information.

In the presence of ratio failures, the computer program was designed to determine the component of the ratio which was most likely to have caused the failure. This was done by a process of inspecting other ratios containing each of the suspect components, and by computing an overall weighted-reliability index for each. The component with the lowest reliability index was judged to be incorrect. The computer then attempted to adjust the questionable figure by a process of "rounding" (multiplying or dividing by successive powers of 10), substitution of a total by a sum of detail, or by imputation based on one of the several ratios in which the suspect component was contained. After each such attempted adjustment, the new figure was accepted if it resulted in an improved reliability index.

In addition to the testing and correction of reported information, the General Statistics Edit was the vehicle for the imputation of data for the 120,000 establishments designated as administrative-record cases, as well as data for companies whose reports were not received at the time the data were tabulated. Imputation for all reasons, failure to report as well as administrative records, accounted overall for about 5 percent of the total value of shipments. Records were not rejected and removed from the computer tapes in the General Statistics Edit, but were flagged and printed out for review by an analyst whenever the computer made a large adjustment, found a large year-to-year change, or could not make an acceptable adjustment after test failure. Excluding administrative records, about 22,000 such cases were printed out for review and possible correction.

The *Inter-card-Inter-column Edit* was designed to test specific relationships among products, materials, and special inquiries. The record was flagged for inspection if the test failed; some 11,000 records were printed out for review from this edit.

The *SIC recoding program* recoded industry codes, product codes, and material codes, which were reported on the 1967 SIC system by means of reference tapes to the 1972 SIC system. Each establishment was assigned an old (1967) SIC industry code and a new (1972) SIC industry code based on the product mix reported in item 18 of the report forms. These industry codes were retained in the establishment record in order to tabulate and bridge the information. (See appendix B for a comparison of the old and new SIC's).

The *Product and Materials Edit* was performed after the data on products and materials had been extracted from the basic establishment records, assembled in product (or material) sequence, and recoded to the 1972 SIC code system. The edit was designed to inspect the reported quantities of production and of consumption after the corresponding values were tested and found acceptable. Unit values, in terms of dollar value per unit of quantity, were computed and ranked from highest to lowest. The most extreme values were removed, and the truncated data were used in the formulation of parameters (average deviation, central value, and upper and lower tolerance limits) which were printed out for review by analysts. This routine differs from those in other edits in that the parameters for editing were developed from the data at hand rather than from historic data or predetermined reasonableness limits.

The *Duplicate Removal Programs* were designed to identify and eliminate duplicate establishment records from the census. The sources of duplication were many; imputed records which were followed by late receipts of a report from the respondent were typical; multiunit companies having plants duplicated on their list of establishments; receiving or imputing full-year plant reports from the selling (predecessor) and acquiring (successor) companies; companies being imputed as single units which had reported as multiunits. A potential duplicate program was used to identify, for analysts' inspection, establishments which were in the same industry, same area, and approximately the same size. These programs resulted in the elimination of nearly 18,000 duplicate establishment records from the census file.

As in previous censuses, this preliminary round of computer editing and professional correction was followed by a more detailed review of establishment records. Among the devices used at this stage was an "outlier" program which printed out ASM establishment reports of dubious quality in terms of their internal consistency. The outlier program used some of the same ratios as the General Statistics Edit, but with parameters updated to reflect the characteristics of 1972, rather than earlier data. Records with one or more suspicious ratios were printed out for review. In addition, aggregates of records at the industry and the geographic cell level were inspected with ratio tolerance limits adjusted to reflect the number of establishments contributing to the cell.

12. COVERAGE AND ACCURACY

Since the list of companies obtained from IRS and SSA records was considered to be complete, no field coverage check was conducted. The prec canvass and other special procedures for multiunit companies described in section 8, "The Mailing Lists," and section 10, "Data Collection," were designed to secure complete lists of establishments, thereby amplifying the IRS-SSA company list. Control totals, in terms of employment and payrolls of multiunit companies, were also used to verify the completeness of establishment coverage. This procedure is discussed in section 11, "Data Processing."

Comparison of statistics tabulated from the census of manufactures with the Census Bureau's Current Industrial Reports series, or with data originating with other agencies was possible

in many instances, thus providing a further confirmation of completeness and accuracy. These figures range from employment and wage totals compiled by the Bureau of Labor Statistics to detailed commodity output figures published by the Internal Revenue Service, the Fish and Wildlife Service, and the Department of Agriculture. In the industry reports in Volume II, differences between the census of manufactures and other statistics are explained wherever possible. Census of manufactures comparability with broad measures such as national income, new capital expenditures, and production indexes are discussed elsewhere in this introduction. The Census Bureau's other procedures designed to improve the accuracy of the census data are discussed above in the sections on data collection and processing. Comments on the valuation of intracompany shipments by multiunit companies are included in section 15.

III. COMMENTS ON STATISTICAL MEASURES AND TABLES

(Explanations and definitions of the various measures of activity for which statistics are compiled in the census of manufactures are presented in appendix A. In the following sections, the limitations and other characteristics of some of these measures are discussed, the content of the statistical tables is described, and comparisons with other statistical series are presented.)

13. EMPLOYMENT AND PAYROLLS IN ADMINISTRATIVE OFFICES AND AUXILIARY ESTABLISHMENTS

In the industry chapters of Volume II, the data on employment and payrolls refer to operating manufacturing establishments and are so described. In the summary tables and the area reports, the employment and payrolls of central administrative offices and auxiliary establishments are included as well. However, whereas the operating establishments were coded to a 4-digit manufacturing industry, the administrative offices and auxiliaries were coded only to the 2-digit industry group of the establishments they served. In most of the tables with industry detail, the administrative offices and auxiliaries are shown as a separate industry group, but statistics for them by 2-digit industry appear in each volume in the General Summary tables. The relative importance of administrative offices and auxiliaries has increased substantially in recent years, because of a tendency to centralize functions formerly performed in manufacturing plants. Such functions include accounting (particularly where computerized), warehousing,

repair services, and miscellaneous others. As indicated in table H, this tendency was quite marked between 1954 and 1963 and between 1967 and 1972.

TABLE H. Employment in Central Administrative Offices and Auxiliaries and in Operating Manufacturing Plants: 1972 and Earlier Census Years

Census year	Employees in operating manufacturing establishments		Employees in central administrative offices and auxiliaries		
	Thousands of employees	Percent change from previous census year	Thousands of employees	Percent change from previous census year	Percent of total employment ¹
1972	19,029	+2.9	994	+19.8	5.2
1967	18,492	+14.0	830	+14.3	4.3
1963	16,235	+5.3	726	+20.6	4.3
1958	15,423	-1.4	602	² +32.9	3.8
1954	15,645	(NA)	453	(NA)	2.8

(NA) Not available.

¹ The total includes manufacturing establishments, central administrative offices, and auxiliaries.

² The apparent increase from 1954 to 1958 is believed to be somewhat overstated, because coverage of administrative offices and auxiliaries was more complete in the 1958 census.

Source: Census of manufactures.

14. MATERIALS

In addition to the total cost of materials which every establishment was requested to report, quantity and cost information was collected for approximately a thousand specific materials. About 350 of these were "complete coverage" materials; i.e., every industry that consumed appreciable quantities of the material was canvassed so that the data would represent at least 90 percent of manufacturing consumption. For the remaining materials, information on consumption was obtained on a more limited basis, generally only in those industries in which the materials were important inputs. Detailed consumption information was collected in the standard materials inquiry, in the product inquiries (for items which were produced and consumed in the same plant), or in a few instances in special inquiries. The resulting statistics are presented mainly in tables 6A and 7A of the industry chapters, Volume II.

Because American industry uses an enormous variety of materials, the choice of materials for which "complete coverage" consumption data (90 percent or higher) were obtained had to be strictly limited. The selection of a particular material for such coverage was based on the following criteria:

- (a) The importance of the material as measured by the total value of U.S. consumption of the material;
- (b) The percentage of total consumption accounted for by manufacturing establishments;
- (c) The availability of consumption information from manufacturers' records, and
- (d) In certain instances, other factors such as the strategic importance of the material or the availability of historical data on the use of the material.

The materials included on a limited-coverage basis were chosen not only because they constituted important inputs for particular industries but frequently because they provided information necessary to classify plants by SIC industry. In using the detailed data on materials consumed which appear in table 7A in the industry chapters of Volume II, the following limitations should be noted:

- (a) Materials were reported for the establishment as a whole and no attempt was made to ascertain how much of the material was used in each of various products. Thus, the industry totals appearing in table 7A represent consumption in secondary products as well as primary products of the industry represented. The extent of secondary production is measured by the specialization and coverage ratios shown in table 5B of the industry chapters.
- (b) Attention should be paid to the codes ending in "000" and captioned "materials, parts, containers, and

supplies, not specified by kind." The amounts appearing on these lines represent imputed totals for establishments whose statistics were developed by use of administrative records, and totals for other establishments which failed to report their consumption in specific terms. Thus, for most industries, the specific categories are understated. A judgment on the statistical significance of the understatement for each industry may be made on the basis of the relationship of the value shown for the "not specified by kind" (code 000) line compared with the total of materials, components, parts, containers, and supplies for the industry.

(c) Establishments consuming less than a specified amount of material were not requested to report consumption of the material separately. For the majority of individual materials, the minimum amount was \$5,000. The use of this cutoff is not believed to have had a significant effect on the totals.

(d) A total of "not elsewhere classified" (n.e.c.) material code 970099 was collected on most forms and is published for each industry. This represents the total cost of materials for an industry for which no material items were prelisted on the form. Survey MA-131, 1972 Supplemental Survey of Materials Consumed, a sample survey of 141 industries, was conducted in 1972 to provide material consumption estimates for the cost of materials reported in material code 970099. Results of this survey are shown in chapter 5, Materials Consumed.

15. VALUE OF SHIPMENTS BY MULTIUNIT COMPANIES

General.—Except for a few industries as indicated in appendix A, the respondents were instructed to report net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. Multiunit companies were instructed to report for each establishment as if it were a separate economic unit and, in particular, to report interplant transfers at their full economic value, including not only the cost of production but also a reasonable proportion of company overhead and profits. Since there is no advertising or other selling cost involved, it would be expected that the value per unit of such transfers would be less than that for commercial sales. The plant receiving the transferred goods was instructed to include them in its cost of materials, valued as at the shipping point plus the cost of freight and other handling charges.

In the case of goods transferred to sales branches, or sold through separate sales offices, the implication of the "f.o.b. plant" instruction is that the value is at a somewhat lower level than the final invoice value, because the cost of selling (mainly the cost of operating the sales branch or office) is excluded.

In practice, there is reason to believe that these instructions were not followed by all companies. In a recordkeeping practices study of 54 multiunit companies conducted a few years ago, it was found that about half of them had reported interplant transfers of semifinished products at commercial or market prices, which tend to be somewhat higher than the "cost plus overhead and profit" requested in the census instructions. In the case of finished products transferred to separate selling organizations, half of the companies interviewed valued the products at their final or invoice price, which again would be somewhat higher than the "f.o.b. plant" transfer value requested. It appears from this study and other observations that the value of shipments of products reported by multiunit companies tends to be overstated. For products characterized by a substantial amount of interplant shipments, separate quantity and value figures were requested on the census forms. Data on these shipments, the unit value of which is less accurate than the unit value for shipments outside the company, are presented separately in table 6A in the industry chapters of Volume II.

Individual Products.—In the 1972 census program, information was collected on the output of approximately 10,500 individual product items.²⁰ The term "product" as used in the census of manufactures represents the finest level of detail for which output information was requested. Consequently, it is not necessarily synonymous with the term product as used in the marketing sense. In some cases, it may be much more detailed, and in other cases, it is more aggregative. For example, pharmaceutical preparations were reported in terms of 160 products, while canned meats was a single product. Frequently, large aggregative values at the product level indicated that detailed production figures were available from other government sources or reliable private surveys.

Some 5,500 of the product items were listed separately on the 1972 census report forms. Data for the remaining 5,000 products were obtained in the monthly, quarterly, or annual commodity surveys comprising the Current Industrial Reports series of the Census Bureau. Totals for the year 1972 for these items as derived from the commodity surveys are shown in the "product shipped" table (table 6A) in the industry chapters of Volume II together with the tieline total value collected in the census for reconciliation.

Typically, both quantity and value of shipments information was collected. However, if there was no meaningful physical quantity measure that could be reported by manufacturers, only value of shipments was collected. For products which are used to a large degree within the same establishment as materials or components in the fabrication of other products, total quantities produced and often the quantities con-

sumed within the plant were collected. Typically, the information on production was also collected for products for which there are significant differences between total production and shipments in a given year because of wide fluctuations in finished goods inventories. Alternate measures of output of products, such as value of work done for products with long production cycles, were used as appropriate and feasible.

Classes of Products.—For the purpose of summarizing the product information, the separate products were aggregated into classes of products which were, in turn, grouped into all primary products of each industry. The code structure used is a 7-digit number for the individual product, a 5-digit code for the class of product, and a 4-digit code for the total primary products in an industry (see section 4 for application of coding structure to the assignment of SIC codes for establishments).

The 10,500 product items in the 1972 census (including products from the Current Industrial Reports program) were grouped into approximately 1,293 separate classes. Products were grouped into product classes to bring out significant differences in the broad types of products within a 4-digit industry. General similarity of the kind or purpose of the products or of the manufacturing processes, type of markets, or of materials used, were the basis for product combinations. The economic significance of the class was also taken into account; residual products of an industry were grouped when the products were not sufficiently significant in dollar value to warrant separate classes.

As a result of the increased number of respondents included in the product-class shipments totals, these categories lend themselves to many more cross tabulations than do the 7-digit products, without disclosing information about the operations of individual companies. In the industry chapters of Volume II, table 6B provides information on the value of shipments of product classes by State; and table 5C, by industry of the establishment producing them. The latter table is the best vehicle for showing the primary and secondary product mix of an industry, as well as the interrelationship between the 4-digit industry value of shipments and the 4-digit product group value of shipments. In table 5A the product class is used to provide finer industry-type general statistics by classifying establishments within an industry according to the degree to which they specialize in producing a specific class of products.

The class-of-product concept was incorporated by the Census Bureau into its own program with the 1947 Census of Manufactures after it developed the technique in the compilation of World War II production statistics. Product classes formed the basis of collecting product information in the annual survey of manufactures when that survey was initiated in 1949. The classes have been revised over the succeeding years to improve the balance and significance of product combinations within each industry and to keep abreast of the growth and decline of products.

²⁰ See 1972 Census of Manufactures, MC72-1.2 "Numerical List of Manufactured Products," and MC72-1.1 "Alphabetic List of Manufactured Products," (1967 SIC basis).

INTRODUCTION—Continued

Effect of Use of Administrative Records on Product Data.—As noted elsewhere in this Introduction, 1972 census statistics for about 120,000 small manufacturers were developed by use of IRS and SSA records. Since the SSA records were coded only to the 4-digit SIC level, it was not considered feasible to estimate the product output of these small companies in terms of specific 5-digit product classes or 7-digit products. The total value of output was therefore coded to the 4-digit level and published separately in table 6A of the industry chapters of Volume II. In table I, page 18, these data have been summarized together with other undistributed 4-digit totals reported

by the larger companies. It will be seen from table I that the contribution of the small companies (administrative records) to product totals was of little importance except in lumber, furniture, and printing and publishing (groups 24, 25 and 27). The large companies (mailed establishments) which for various reasons reported only in terms of group totals were of somewhat more importance, accounting overall for about 3 percent of the total value of product shipments.

Nominally, the shipments of "small companies" as shown in table I represent the output of all establishments with less than 10 employees. Actually, only 35 percent of the value of

TABLE I. Value of Products Not Specified by Kind: 1972 and 1967

Product group code ¹	Total value of product shipments (mil. dol.)		Products not specified by kind

Note: These values represent product shipments, irrespective of the industry in which the products were made, and therefore differ from the industry group totals shown in the General Summary tables.

¹ The product shipment data for 1972 are tabulated on the 1972 (new) SIC basis; therefore data for 1972 and 1967 are not completely comparable for most of the major 2-digit groups due to the reclassification of products in the 1972 SIC revision across 2-digit groups. See appendix B for the products of 4-digit industries that were reclassified across 2-digit major groups.

² Estimates derived from administrative records. See text for further discussion.

³ In the 1972 SIC revision, the products for Major Group 19 were reclassified to Major Groups 34, 36, 37, and 38.

shipments of establishments with less than 10 employees was obtained from administrative records. This was due to several factors, the most important of which were—

(a) Many of the establishments with less than 10 employees were owned by multiunit companies and were covered in the mail canvass.

(b) Questionnaires were mailed to about 4,000 of the companies identified as having less than 10 employees. These were the small companies included in the ASM sample; the rest were included in the mail canvass to improve the estimates of general statistics, products, and materials.

(c) Some companies identified originally as having 10 employees or more turned out to have less than 10 employees in 1972.

Another factor tended to reduce the value of products not specified by kind attributed to small companies, thus affecting table 1 particularly. This was the fact that some 4-digit industries were represented by only one product category (an example is industry 3273, Ready-Mixed Concrete). Administrative-record estimates for products such as this were treated as specific information and not tabulated under the "not specified by kind" heading.

These factors taken together explain why the value of products "not specified by kind" attributed to small companies in table 1 is only 1.5 percent of the total, while the 159,000 establishments with less than 10 employees account for 2.5 percent of the total value added by manufacture in table E.

The value of product shipments accounted for by the small companies increased from 1.0 percent in the 1967 census to 1.5 percent in 1972. This is because considerably more establishments, initially identified as having less than 10 employees, actually had more than 10 employees in 1972.

The data for many of the specific 7-digit products shown in table 6A are understated by a proportion of the "not specified by kind" codes in each industry.

16. DUPLICATION IN COST OF MATERIALS AND VALUE OF PRODUCTS

The aggregates of the cost of materials and value of shipments figures for industry groups and for all manufacturing industries include large amounts of duplication since the products of some industries are used as materials by others. With some important exceptions, such as SIC 3312, Blast Furnaces and Steel Mills, this duplication is not significant within individual 4-digit industries. However, it is significant at the 2-digit and 3-digit industry level because these group totals often include industries which represent successive stages in

the production of a finished manufactured product. Examples are the addition of flour mills to bakeries in the total value of shipments of SIC Major Group 20 and the addition of pulp-mills to papermills in Group 26. Economists have estimated that the value of manufactured products exclusive of such duplication—the value of finished manufactures—tends to approximate two-thirds of the total value of shipments reported in the census of manufactures.

Because the amounts of duplication contained in the cost of materials and value of products figures cannot be measured with any degree of precision, caution is urged with their use when they are provided at the 2- and 3-digit industry group level.

Even where no significant amount of duplication is involved, value of shipments figures are of limited use as measures of the relative economic importance of individual manufacturing industries or geographic areas because of the wide variation in ratio of materials, labor, and other processing costs to value of shipments, both among industries and within the same industry. To a large extent, value added by manufacture does not have these limitations and is therefore a better measure for comparison.

17. VALUE ADDED BY MANUFACTURE

General.—Value added by manufacture is derived by subtracting the total cost of materials (including materials, supplies, fuel, electric energy, cost of resales, and miscellaneous receipts) from the value of shipments (including resales) and other receipts and adjusting the resulting amount by the net change in finished products and work-in-process inventories between the beginning and end of the year.²¹

Value added avoids the duplication in the value of shipments figure which results from the inclusion of the shipments of establishments producing materials and components along with the shipments of establishments producing finished products. It does not exclude purchased business services, as does the national income concept described below.²² Nevertheless, it is considered to be the best value measure now available for comparing the relative economic importance of manufacturing among industries and geographic areas.

²¹ For a few industries (for example, ship building) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

²² Collection of data on the cost of purchased business services at the plant level presents many problems. Advertising by multiunit companies, for example, is frequently charged at the company level and the cost either not allocated to plants or if allocated are only included as part of a broader company overhead category. National income data, on the other hand, are compiled in part from company rather than plant data, such as the IRS Statistics of Income in which advertising is presented as a separate cost item based on company reports.

INTRODUCTION—Continued

National income originating in the manufacturing sector, as developed in the national accounts maintained by the Bureau of Economic Analysis (BEA), is somewhat similar to value added in concept, but there are important differences. National income is the aggregate earnings of labor and capital which arise in the current production of goods and services in the manufacturing sector. Thus it measures the total factor costs incurred and is a more "net" conception of value added than that which it has been found feasible to compile in the economic censuses on an establishment basis. National income

excludes, in addition to cost of materials, such other costs as depreciation charges, State and local taxes (other than corporate income taxes), allowance for bad debts, and purchases of services from nonmanufacturing enterprises, such as contract costs involved in maintenance and repair, services of development and research firms, services of engineering and management consultants, advertising, telephone and telegraph expense, insurance, royalties, patent fees, etc.

In part, the national income estimates are prepared from company rather than establishment data. This method results

TABLE J. Comparison of National Income Originating and Value Added by Major Industry Group: 1972 and 1967

SIC code	Industry group description	National income originating ¹ (bil. dol.)		Value added by manufacturing (bil. dol.)		Column 1 divided by column 2	
		(1)		(2)			
		1972	1967	1972	1967	1972	1967

² This Major Group was recoded to Major Groups 34, 36, 37 and 38 in the 1972 SIC revision.

in the inclusion of some part of the net value added by non-manufacturing establishments of companies classified as being primarily manufacturing and, conversely, in the exclusion of some part of the net value added by manufacturing establishments of companies classified as primarily nonmanufacturing. It is believed that for manufacturing as a whole the net effect increases national income. In the Petroleum and Coal Products major industry group, nonmanufacturing activities of manufacturing companies are so significant that this is the one group in which national income exceeds value added, as shown in table J.

Historical Comparison.—Whatever changes have taken place in the relative importance of the costs included in value added but excluded from national income have been gradual. As shown in table K, the ratio between the two figures has been fairly constant over the past decade.

TABLE K. National Income Originating in Manufacturing and Value Added by Manufacture: 1972 and Earlier Years

Year	National income originating in manufacturing (bil. dol.) (1)	Value added by manufacture (bil. dol.) (2)	Column 1 divided by column 2
1972	252.6	354.0	0.71
1971	226.4	314.1	.72
1970	217.5	300.2	.72
1969	222.3	304.4	.73
1968	212.7	285.1	.75
1967	195.2	262.0	.75
1966	191.5	250.9	.76
1965	172.6	226.9	.76
1964	155.6	206.2	.75
1963	143.8	192.1	.75

1939	18.1	¹ 24.5	.74

¹ Unadjusted.

Sources: National income, survey of current business; value added, census of manufactures and annual survey of manufactures.

Reconciliation with National Income Components.—Figures are not available to permit a reconciliation of the estimates for value added in manufacturing and the national income originating in manufacturing for the current period. However, in 1957, the Census Bureau conducted a special survey, MC-D11, "Selected Costs and Assets of Manufacturing Establishments," which collected information on some of the costs included in value added for services purchased from other sectors or excluded from the national income estimates. These specific costs which accounted for about \$15 billion of the \$148 billion of value added in 1957 were maintenance and repairs, \$4.5 billion; insurance, \$.7 billion; property taxes, \$1.5 billion; rental payments, \$1.4 billion; and depreciation, \$7.3 billion. The residual value added, \$132 billion, was approximately \$16 billion in excess of national income of \$116 billion.

Table L presents an approximate reconciliation of national income and value added figures for manufacturing in 1957. The national income estimates for payrolls and other factor income in that year are based on the unrevised national income figures which are somewhat lower than the revised estimate appearing in table K. It should be noted that the labor costs included in national income and value added are reasonably close despite the fact that they are computed on a slightly different basis. If the proprietary and profit incomes of the company-based national income estimates are allocated to the establishments included in the census of manufactures, value added exceeds national income by \$35 billion of which \$15 billion is attributable to costs reported on survey MC-D11. Somewhat more than half of the \$35 billion excess represents the inclusion in value added by manufacture of purchased business services arising in other economic sectors; the remainder reflects conceptual differences arising from the inclusion, in value added, of indirect business taxes and depreciation which are excluded by definition from national income.

18. CAPITAL EXPENDITURES

Under this heading, manufacturers were instructed to report expenditures of the type chargeable to fixed assets accounts, for which depreciation reserves are normally maintained. Actual capital outlays during the year were requested, not the final value of equipment put in place or structures completed during the year.

The Census Bureau estimates of capital expenditures tend to be lower than those published in the joint Bureau of Economic Analysis-Securities and Exchange Commission survey. In addition to normal sampling variation, a major source of difference is to be found in the scope of the two series. Census data relate only to manufacturing establishments,

TABLE L. 1957 Comparative Statistics on Value Added and National Income in Manufacturing

(Billions of dollars)

Item	Value added	National income ¹
Total	147.8	112.5
Payrolls	89.4	87.9
Payrolls of operating manufacturing establishments	76.4	² 80.6
Supplements to wages in operating manufacturing establishments	6.0	
Payrolls of central administrative offices and auxiliaries, sales branches and offices of manufacturing companies	⁴ 7.0	
Other factor incomes (Corporate profits, proprietary income)	24.6	³ 7.2
Costs of manufacturing establishments reported on MC-D11	15.4	24.6
Not part of national income:		
Depreciation	7.3	(X)
Property taxes	1.5	(X)
Probably included in other sectors:		
Maintenance and repairs	4.5	(X)
Rental payments	1.4	(X)
Insurance7	(X)
Other costs (company overhead other than payrolls included above; e.g., company-level depreciation, business taxes, and services purchased, and services purchased directly by plants, advertising, legal, accounting, and other professional services; communications, patent fees, royalties, travel costs, etc. ...)	18.4	(X)

(X) Not applicable.

¹ Prior to 1958 revisions of national income. The revised total was \$116.3 billion.² Payrolls.³ Supplements to wages.⁴ Estimate based on figures reported in the 1958 economic censuses.

whereas the BEA-SEC series covers all establishments of manufacturing companies—nonmanufacturing as well as manufacturing. This factor is particularly important in the petroleum industry where company expenditures for developing new wells and new distribution facilities are ordinarily much larger than their capital expenditures at refineries. On the other hand, manufacturing establishments of companies engaged primarily in nonmanufacturing activities are excluded from

the BEA-SEC series but included in census figures. The BEA-SEC and census data for recent years are shown in tables M and N.

19. PLANT SPECIALIZATION

As discussed in section 4 above, the primary products of a plant are those which determine its industry classification; all other products are referred to as secondary products. The value of a plant's primary products in comparison to its total production is referred to as its degree of specialization. For each plant, two measures of specialization were computed: (1) A 4-digit primary product-specialization ratio, which is the sum of the values of all the plant's primary products divided by the sum of all its primary and secondary products; and (2) a 5-digit primary product-class specialization ratio, which is the sum of the largest 5-digit product-class value divided by the sum of its primary and secondary products (the miscellaneous receipts of the establishment were not included in these

TABLE N. Expenditures for New Plant and Equipment—
BEA—SEC Series and Census of Manufactures, by Industry
Group: 1972

Industry groups	BEA-SEC series ¹ (bil. dol.) (1)	Census of manu- factures, (bil. dol.) (2)	Column 2 divided by column 1
All manufacturing, total	31.4	24.1	0.77
Durable goods, total	15.7	12.7	.81
Primary metals	2.8	2.1	.75
Electric machinery	2.4	1.4	.58
Machinery, except electric	2.9	1.9	.66
Transportation equipment	2.5	2.7	1.08
Stone, clay, and glass	1.2	1.2	1.00
Other durables	3.9	3.4	.87
Nondurable goods, total	15.7	11.4	.73
Food and beverages	2.6	2.4	.92
Textiles7	1.1	1.57
Paper	1.4	1.3	.93
Chemicals	3.5	2.7	.77
Petroleum	5.3	1.2	.23
Rubber	1.1	1.1	1.00
Other nondurables	1.1	1.6	1.45

¹ Source: 1974 Business Statistics, U.S. Department of Commerce, Bureau of Economic Analysis.

calculations). For example, assume that an establishment reported the following:

Total value of shipments and other receipts	\$1,000
Miscellaneous receipts (resales, etc.)	15
Total value of products shipped	985
32721 Concrete pipe products	100
32722 Precast concrete products	785
32730 Ready-mixed concrete	100

This plant would be coded into SIC industry 3272, Concrete Products, with a primary product specialization ratio of 90 percent ($\$885 \div \985); it would be subclassified into the 5-digit class 32722, Precast Concrete, with a primary product class specialization ratio of 80 percent ($\$785 \div \985).

In the 1972 census, selected general statistics (number of establishments, employment, payrolls, value added, cost of materials, value of shipments, and capital expenditures) were tabulated to primary product-class levels by assigning the plant totals to the principal 5-digit codes. These data are presented in table 5A of the industry chapters, Volume II. For most product classes, table 5A also provides general statistics for establishments specializing in the class to the extent of 75 percent or more.

Table 5A permits analysis of an industry in terms of the differences introduced by variation among establishments in the degree of specialization in the products of the industry or a subgroup (5-digit). For example, where the ratios among various statistics tend to be different for establishments specializing to different degrees in the products of the industry or in different product classes, the ratios for the industry as a whole would be significantly affected by changes in its product mix.

20. OPERATING RATIOS

Since all of the data collected in the census on establishment reports are interrelated, comparisons of the various measures of activity are of considerable interest. Beginning with the 1963 census, several ratios have been routinely computed and presented in the industry chapters of Volume II. For 1972 and earlier years, the following nine ratios were published for each 4-digit industry:

Payroll per employee
Production workers as percent of total employment
Annual man-hours of production workers
Average hourly earnings of production workers
Cost of materials per dollar of shipments
Cost of materials and payrolls per dollar of shipments
Value added per employee
Payrolls as percent of value added
Value added per man-hour of production worker

21. SUBJECT AND SPECIAL REPORTS SHOWN IN VOLUME I, SUMMARY AND SUBJECT STATISTICS

Volume I includes the seven subject reports and the six special reports presenting statistics which are not published

elsewhere. The following chapters were originally published in the subject series:

Chapter 1. General Summary.—This chapter, which appears in other volumes as well as Volume I, provides summary tabulations of data presented in greater detail in other census tables.

Chapter 2. Employment and Labor Costs in Operating Manufacturing Establishments.—This chapter presents the compilation of employment and labor costs for the United States as a whole and for each industry group and 4-digit industry. A more detailed description of the report and explanation of the terms employed is given in the introduction to the chapter.

Chapter 3. Manufacturers' Inventories.—These tables summarize the inventory data published in table 3 of the industry chapters of Volume II. A description of the statistics is given in appendix A.

Chapter 4. Expenditures for Plant and Equipment.—These tables summarize the expenditures data published in table 3 of the industry chapters of Volume II. A description of the data is given in appendix A and in section 18, "Capital Expenditures."

Chapter 5. Materials Consumed.—This chapter consists of a compilation of detailed statistics on consumption of materials, fuels, and electricity. These figures also appear in Volume II, Industry Statistics, as tables 7A and 7B for each industry.

Chapter 6. Gross Book Value of Depreciable Assets and Rental Payments.—This chapter presents the compilation of the gross book value of total assets and separate data for structure and machinery by industry group and industry. Rental payments for structures and machinery are also presented by industry group and industry. A more detailed description of the report and explanation of the terms employed is given in the introduction to the chapter.

Chapter 7. Selected Metalworking Operations.—This chapter presents the results of an inquiry concerning employment in metalworking plants such as foundry, forge shop, die casting department, and heat treating. The number of establishments in which these facilities are operated is presented, as well as the number of production workers engaged.

The following chapters were originally published in the special report series:

Chapter 8. Manufacturing Activity in Government Establishments.—This chapter presents data on manufacturing activities in selected types of government establishments in the United States. The statistics are not included in other census of manufactures tables, which cover only privately operated establishments. A more detailed description of the report is given in the introduction to the chapter.

Chapter 9. Concentration Ratios.—This chapter presents concentration ratios and other information on the share of industrial activity accounted for by the largest companies, both for the United States as a whole and for each of the 450 manufacturing industries. A more detailed description of the report and explanations of the terms employed is given in the introduction to the chapter.

Chapter 10. Type of Organization.—This chapter presents data for manufacturing establishments classified as to the legal form of ownership (corporate, individual proprietor, or partnership) and the establishment owner as a multiunit or single-unit company.

Chapter 11. Water Use in Manufacturing.—This chapter presents the results of a survey of the 1973 consumption of water in establishments consuming 20 million gallons or more annually. A more detailed description of the report and definitions of the terms employed, is given in the introduction to the chapter.

Chapter 12. Textile Machinery in Place.—This chapter presents the results of a 1973 survey on the number, by kind, of the various textile machines. Geographic breakdowns of the major textile operations are presented. The data are also broken out by industry for the various textile machines. A description of the statistics is given in the chapter.

Chapter 13. Fuels and Electric Energy Consumed.—This chapter consists of a compilation of detailed statistics on the consumption of fuels and electric energy from the 1971 Annual Survey of Manufactures. Data are presented on the quantity and costs of fuels and electric energy consumed for major groups and industries. A more detailed explanation of the estimates derived and terms employed are given in the introduction and the explanatory text for the chapter.

22. CONFIDENTIALITY

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. In suppressing figures to avoid disclosing information of individual companies, geographic region and division totals are given precedence over individual States; States are given precedence over standard metropolitan statistical areas; standard metropolitan statistical areas over counties; and counties over cities. In tables showing industry detail, major industry group (2-digit) totals take precedence over industry group (3-digit) totals which, in turn, take precedence over individual (4-digit) industries. Similarly, in product tables, 4-digit product groupings take precedence over 5-digit product classes and the latter over individual 7-digit products.

Such order of precedence was used because (1) it was considered preferable to show regional data for an industry, even at the cost of withholding data for another (usually the least significant) State in a region, rather than to show all publishable data for the individual States and group the disclosure States throughout the United States in an "all other" category as was done in the 1939 and earlier censuses; and (2) by giving preference to industry-group statistics over individual industries within each State, the extent to which individual States can be compared within the SIC industry classification framework is greatly increased.

23. ABBREVIATIONS

The following abbreviations and symbols occur frequently in text, tables, and footnotes:

—	Zero
X	Not applicable
NA	Not available
D	Withheld to avoid disclosing figures for individual companies
n.e.c.	Not elsewhere classified
n.s.k.	Not specified by kind
lin.	Linear
equiv.	Equivalent
hp	Horsepower
kWh	Kilowatt-hours
SIC	Standard Industrial Classification
IRS	Internal Revenue Service
SSA	Social Security Administration
ASM	Annual Survey of Manufactures
CIR	Current Industrial Reports
BEA	Bureau of Economic Analysis
SEC	Securities and Exchange Commission

Other abbreviations, such as lb., gal., yd., doz., and bbl., are used in the customary sense. Where the term "tons" only is used, it refers to short tons of 2,000 pounds; where the figures are expressed in tons of 2,240 pounds, the unit of measure is specified as "long tons" or "gross tons."

Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.

Industry Descriptions

(Following is a compilation of the Industrial Security Classification (SIC) major groups and industries covered in the three parts of this volume of industry statistics.)

PART 1

Major Group 20—FOOD AND KINDRED PRODUCTS

20A Meat Products

- 2011 Meatpacking plants
- 2013 Sausages and other prepared meats
- 2016 Poultry dressing plants
- 2017 Poultry and egg processing

20B Dairy Products

- 2021 Creamery butter
- 2022 Cheese, natural and processed
- 2023 Condensed and evaporated milk
- 2024 Ice cream and frozen desserts
- 2026 Fluid milk

20C Preserved Fruits and Vegetables

- 2032 Canned specialties
- 2033 Canned fruits and vegetables
- 2034 Dehydrated fruits, vegetables, soups
- 2035 Pickles, sauces, and salad dressings
- 2037 Frozen fruits and vegetables
- 2038 Frozen specialties

20D Grain Mill Products

- 2041 Flour and other grain mill products
- 2043 Cereal breakfast foods
- 2044 Rice milling
- 2045 Blended and prepared flour
- 2046 Wet corn milling
- 2047 Dog, cat, and other pet food
- 2048 Prepared feeds, n.e.c.

20E Bakery Products

- 2051 Bread, cake, and related products
- 2052 Cookies and crackers

20F Sugar and Confectionery Products

- 2061 Raw cane sugar
- 2062 Cane sugar refining
- 2063 Beet sugar
- 2065 Confectionery products
- 2066 Chocolate and cocoa products
- 2067 Chewing gum

20G Fats and Oils

- 2074 Cottonseed oil mills
- 2075 Soybean oil mills
- 2076 Vegetable oil mills, n.e.c.
- 2077 Animal and marine fats and oils
- 2079 Shortening and cooking oils

20H Beverages

- 2082 Malt beverages
- 2083 Malt
- 2084 Wines, brandy, and brandy spirits
- 2085 Distilled liquor, except brandy
- 2086 Bottled and canned soft drinks
- 2087 Flavoring extracts and sirups, n.e.c.

20I Miscellaneous Foods and Kindred Products

- 2091 Canned and cured seafoods
- 2092 Fresh or frozen packaged fish
- 2095 Roasted coffee
- 2097 Manufactured ice
- 2098 Macaroni and spaghetti
- 2099 Food preparations, n.e.c.

Major Group 21—TOBACCO MANUFACTURES

21A Tobacco Products

- 2111 Cigarettes
- 2121 Cigars
- 2131 Chewing and smoking tobacco
- 2141 Tobacco stemming and redrying

Major Group 22—TEXTILE MILL PRODUCTS

22A Weaving Mills

- 2211 Weaving mills, cotton
- 2221 Weaving mills, manmade fiber and silk
- 2231 Weaving and finishing mills, wool
- 2241 Narrow fabric mills

22B Knitting Mills

- 2251 Women's hosiery, except socks
- 2252 Hosiery, n.e.c.
- 2253 Knit outerwear mills
- 2254 Knit underwear mills
- 2257 Circular knit fabric mills
- 2258 Warp knit fabric mills
- 2259 Knitting mills, n.e.c.

22C Dyeing and Finishing Textiles, Except Wool Fabrics and Knit Goods

- 2261 Finishing plants, cotton
- 2262 Finishing plants, manmade fiber and silk
- 2269 Finishing plants, n.e.c.

22D Floor Covering Mills

- 2271 Woven carpets and rugs
- 2272 Tufted carpets and rugs
- 2279 Carpets and rugs, n.e.c.

- 22E Yarn and Thread Mills**
 2281 Yarn mills, except wool
 2282 Throwing and winding mills
 2283 Wool yarn mills
 2284 Thread mills
- 22F Miscellaneous Textile Goods**
 2291 Felt goods, except woven felts and hats
 2292 Lace goods
 2293 Paddings and upholstery filling
 2294 Processed textile waste
 2295 Coated fabrics, not rubberized
 2296 Tire cord and fabric
 2297 Nonwoven fabrics
 2298 Cordage and twine
 2299 Textile goods, n.e.c.

Major Group 23—APPAREL AND OTHER TEXTILE PRODUCTS

- 23A Men's and Boys' Apparel**
 2311 Men's and boys' suits and coats
 2321 Men's and boys' shirts and nightwear
 2322 Men's and boys' underwear
 2323 Men's and boys' neckwear
 2327 Men's and boys' separate trousers
 2328 Men's and boys' work clothing
 2329 Men's and boys' clothing, n.e.c.
- 23B Women's and Misses' Outerwear**
 2331 Women's and misses' blouses and waists
 2335 Women's and misses' dresses
 2337 Women's and misses' suits and coats
 2339 Women's and misses' outerwear, n.e.c.
- 23C Women's and Children's Underwear, Headwear, Children's Outerwear**
 2341 Women's and children's underwear
 2342 Brassieres and allied garments
 2351 Millinery
 2352 Hats and caps, except millinery
 2361 Children's dresses and blouses
 2363 Children's coats and suits
 2369 Children's outerwear, n.e.c.
- 23D Miscellaneous Apparel and Accessories**
 2371 Fur goods
 2381 Fabric dress and work gloves
 2384 Robes and dressing gowns
 2385 Waterproof outer garments
 2386 Leather and sheep lined clothing
 2387 Apparel belts
 2389 Apparel and accessories, n.e.c.

- 23E Miscellaneous Fabricated Textile Products**
 2391 Curtains and draperies
 2392 Housefurnishings, n.e.c.
 2393 Textile bags
 2394 Canvas and related products
 2395 Pleating and stitching
 2396 Automotive and apparel trimmings
 2397 Schiffli machine embroideries
 2399 Fabricated textile products, n.e.c.

Major Group 24—LUMBER AND WOOD PRODUCTS

- 24A Logging Camps, Sawmills, and Planing Mills**
 2411 Logging camps and logging contractors
 2421 Sawmills and planing mills, general
 2426 Hardwood dimension and flooring
 2429 Special product sawmills, n.e.c.
- 24B Millwork, Plywood, and Structural Wood Members, N.E.C.**
 2431 Millwork
 2434 Wood kitchen cabinets
 2435 Hardwood veneer and plywood
 2436 Softwood veneer and plywood
 2439 Structural wood members, n.e.c.
- 24C Wooden Containers and Miscellaneous Wood Products**
 2441 Nailed wood boxes and shooks
 2448 Wood pallets and skids
 2449 Wood containers, n.e.c.
 2491 Wood preserving
 2492 Particleboard
 2499 Wood products, n.e.c.
- 24D Wood Buildings and Mobile Homes**
 2451 Mobile homes
 2452 Prefabricated wood buildings

PART 2

Major Group 25—FURNITURE AND FIXTURES

- 25A Household Furniture**
 2511 Wood household furniture
 2512 Upholstered household furniture
 2514 Metal household furniture
 2515 Mattresses and bedsprings
 2517 Wood TV and radio cabinets
 2519 Household furniture, n.e.c.

**25B Office, Public Building, and Miscellaneous Furniture;
Office and Store Fixtures**

- 2521 Wood office furniture
- 2522 Metal office furniture
- 2531 Public building and related furniture
- 2541 Wood partitions and fixtures
- 2542 Metal partitions and fixtures
- 2591 Drapery hardware and blinds and shades
- 2599 Furniture and fixtures, n.e.c.

Major Group 26—PAPER AND ALLIED PRODUCTS

26A Pulp, Paper, and Board Mills

- 2611 Pulpmills
- 2621 Papermills, except building paper
- 2631 Paperboard mills
- 2661 Building paper and board mills

**26B Converted Paper and Paperboard Products, Except
Containers and Boxes**

- 2641 Paper coating and glazing
- 2642 Envelopes
- 2643 Bags, except textile bags
- 2645 Die-cut paper and board
- 2646 Pressed and molded pulp goods
- 2647 Sanitary paper products
- 2648 Stationery products
- 2649 Converted paper products, n.e.c.

26C Paperboard Containers and Boxes

- 2651 Folding paperboard boxes
- 2652 Setup paperboard boxes
- 2653 Corrugated and solid fiber boxes
- 2654 Sanitary food containers
- 2655 Fiber cans, drums, and similar products

Major Group 26—PRINTING AND PUBLISHING

**27A Newspapers, Periodicals, Books, and Miscellaneous
Publishing**

- 2711 Newspapers
- 2721 Periodicals
- 2731 Book publishing
- 2732 Book printing
- 2741 Miscellaneous publishing

27B Commercial Printing and Manifold Business Forms

- 2751 Commercial printing, letterpress
- 2752 Commercial printing, lithographic
- 2753 Engraving and plate printing
- 2754 Commercial printing, gravure
- 2761 Manifold business forms

27C Greeting Cards; Bookbinding; Printing Trade Services

- 2771 Greeting card publishing
- 2782 Blankbooks and looseleaf binders
- 2789 Bookbinding and related work
- 2791 Typesetting
- 2793 Photoengraving
- 2794 Electrotyping and stereotyping
- 2795 Lithographic platemaking services

Major Group 28—CHEMICALS AND ALLIED PRODUCTS

28A Industrial Inorganic Chemicals

- 2812 Alkalies and chlorine
- 2813 Industrial gases
- 2816 Inorganic pigments
- 2819 Industrial inorganic chemicals, n.e.c.

**28B Plastics Materials, Synthetic Rubber, and Manmade
Fibers**

- 2821 Plastics materials and resins
- 2822 Synthetic rubber
- 2823 Cellulosic manmade fibers
- 2824 Organic fibers, noncellulosic

28C Drugs

- 2831 Biological products
- 2833 Medicinals and botanicals
- 2834 Pharmaceutical preparations

28D Soap, Cleaners, and Toilet Goods

- 2841 Soap and other detergents
- 2842 Polishes and sanitation goods
- 2843 Surface active agents
- 2844 Toilet preparations

28E Paints and Allied Products

- 2851 Paints and allied products

28F Industrial Organic Chemicals

- 2861 Gum and wood chemicals
- 2865 Cyclic crudes and intermediates
- 2869 Industrial organic chemicals, n.e.c.

28G Agricultural Chemicals

- 2873 Nitrogenous fertilizers
- 2874 Phosphatic fertilizers
- 2875 Fertilizers, mixing only
- 2879 Agricultural chemicals, n.e.c.

28H Miscellaneous Chemical Products

- 2891 Adhesives and sealants
- 2892 Explosives
- 2893 Printing ink
- 2895 Carbon black
- 2899 Chemical preparations, n.e.c.

Major Group 29—PETROLEUM AND COAL PRODUCTS

29A Petroleum and Coal Products

- 2911 Petroleum refining
- 2951 Paving mixtures and blocks
- 2952 Asphalt felts and coatings
- 2992 Lubricating oils and greases
- 2999 Petroleum and coal products, n.e.c.

Major Group 30—RUBBER AND PLASTICS PRODUCTS

30A Rubber and Miscellaneous Plastics Products

- 3011 Tires and inner tubes
- 3021 Rubber and plastics footwear
- 3031 Reclaimed rubber
- 3041 Rubber and plastics hose and belting
- 3069 Fabricated rubber products, n.e.c.
- 3079 Miscellaneous plastics products

Major Group 31—LEATHER AND LEATHER PRODUCTS

31A Tanning; Industrial Leather Goods; and Shoes

- 3111 Leather tanning and finishing
- 3131 Boot and shoe cut stock and findings
- 3142 House slippers
- 3143 Men's footwear, except athletic
- 3144 Women's footwear, except athletic
- 3149 Footwear, except rubber, n.e.c.

31B Leather Gloves; Luggage; and Miscellaneous Leather Goods

- 3151 Leather gloves and mittens
- 3161 Luggage
- 3171 Women's handbags and purses
- 3172 Personal leather goods
- 3199 Leather goods, n.e.c.

Major Group 32—STONE, CLAY, AND GLASS PRODUCTS

32A Glass Products

- 3211 Flat glass
- 3221 Glass containers
- 3229 Pressed and blown glass, n.e.c.
- 3231 Products of purchased glass

32B Cement and Structural Clay Products

- 3241 Cement, hydraulic
- 3251 Brick and structural clay tile
- 3253 Ceramic wall and floor tile
- 3255 Clay refractories
- 3259 Structural clay products, n.e.c.

32C Pottery and Related Products

- 3261 Vitreous plumbing fixtures
- 3262 Vitreous china food utensils
- 3263 Fine earthenware food utensils
- 3264 Porcelain electrical supplies
- 3269 Pottery products, n.e.c.

32D Concrete, Plaster, and Cut-Stone Products

- 3271 Concrete block and brick
- 3272 Concrete products, n.e.c.
- 3273 Ready-mixed concrete
- 3274 Lime
- 3275 Gypsum products
- 3281 Cut stone and stone products

32E Abrasive, Asbestos, and Miscellaneous Nonmetallic Mineral Products

- 3291 Abrasive products
- 3292 Asbestos products
- 3293 Gaskets, packing and sealing devices
- 3295 Minerals, ground or treated
- 3296 Mineral wool
- 3297 Nonclay refractories
- 3299 Nonmetallic mineral products, n.e.c.

Major Group 33—PRIMARY METAL INDUSTRIES

33A Blast Furnaces, Steel Works, and Rolling and Finishing Mills

- 3312 Blast furnaces and steel mills
- 3313 Electrometallurgical products
- 3315 Steel wire and related products
- 3316 Cold finishing of steel shapes
- 3317 Steel pipe and tubes

33B Ferrous and Nonferrous Foundries

- 3321 Gray iron foundries
- 3322 Malleable iron foundries
- 3324 Steel investment foundries
- 3325 Steel foundries, n.e.c.
- 3361 Aluminum foundries
- 3362 Brass, bronze, and copper foundries
- 3369 Nonferrous foundries, n.e.c.

33C Smelting and Refining of Nonferrous Metals and Alloys

- 3331 Primary copper
- 3332 Primary lead
- 3333 Primary zinc
- 3334 Primary aluminum
- 3339 Primary nonferrous metals, n.e.c.
- 3341 Secondary nonferrous metals

33D Nonferrous Metal Mills and Miscellaneous Primary Metal Products

- 3351 Copper rolling and drawing
- 3353 Aluminum sheet, plate, and foil
- 3354 Aluminum extruded products
- 3355 Aluminum rolling and drawing, n.e.c.
- 3356 Nonferrous rolling and drawing, n.e.c.
- 3357 Nonferrous wiredrawing and insulating
- 3398 Metal heat treating
- 3399 Primary metal products, n.e.c.

PART 3

Major Group 34—FABRICATED METAL PRODUCTS

34A Metal Cans, Cutlery, Handtools, and General Hardware

- 3411 Metal cans
- 3412 Metal barrels, drums, and pails
- 3421 Cutlery
- 3423 Hand and edge tools, n.e.c.
- 3425 Handsaws and saw blades
- 3429 Hardware, n.e.c.

34B Heating Apparatus, Except Electric and Warm Air Furnaces, and Plumbing Fixtures

- 3431 Metal sanitary ware
- 3432 Plumbing fittings and brass goods
- 3433 Heating equipment, except electric

34C Fabricated Structural Metal Products

- 3441 Fabricated structural metal products
- 3442 Metal doors, sash, and trim
- 3443 Fabricated platework (boiler shops)
- 3444 Sheet metalwork
- 3446 Architectural metalwork
- 3448 Prefabricated metal buildings
- 3449 Miscellaneous metalwork

34D Screw Machine Products, Fasteners and Washers; Metal Forgings and Stampings; and Metal Services

- 3451 Screw machine products
- 3452 Bolts, nuts, rivets, and washers
- 3462 Iron and steel forgings
- 3463 Nonferrous forgings
- 3465 Automotive stampings
- 3466 Crowns and closures
- 3469 Metal stampings, n.e.c.
- 3471 Plating and polishing
- 3479 Metal coating and allied services

34E Ordnance and Accessories, N.E.C.

- 3482 Small arms ammunition
- 3483 Ammunition, except for small arms, n.e.c.
- 3484 Small arms
- 3489 Ordnance and accessories, n.e.c.

34F Miscellaneous Fabricated Metal Products

- 3493 Steel springs, except wire
- 3494 Valves and pipe fittings
- 3495 Wire springs
- 3496 Miscellaneous fabricated wire products
- 3497 Metal foil and leaf
- 3498 Fabricated pipe and fittings
- 3499 Fabricated metal products, n.e.c.

Major Group 35—MACHINERY, EXCEPT ELECTRICAL

35A Engines and Turbines and Farm Machinery and Equipment

- 3511 Turbines and turbine generator sets
- 3519 Internal combustion engines, n.e.c.
- 3523 Farm machinery and equipment
- 3524 Lawn and garden equipment

35B Construction, Mining, and Materials Handling Machinery and Equipment

- 3531 Construction machinery
- 3532 Mining machinery
- 3533 Oilfield machinery
- 3534 Elevators and moving stairways
- 3535 Conveyors and conveying equipment
- 3536 Hoists, cranes, and monorails
- 3537 Industrial trucks and tractors

35C Metalworking Machinery and Equipment

- 3541 Machine tools, metal-cutting types
- 3542 Machine tools, metal-forming types
- 3544 Special dies, tools, jigs, and fixtures
- 3545 Machine tool accessories
- 3546 Power-driven handtools
- 3547 Rolling mill machinery
- 3549 Metalworking machinery, n.e.c.

35D Special Industry Machinery, Except Metalworking Machinery

- 3551 Food products machinery
- 3552 Textile machinery
- 3553 Woodworking machinery
- 3554 Paper industries machinery
- 3555 Printing trades machinery
- 3559 Special industry machinery, n.e.c.

35E General Industrial Machinery and Equipment

- 3561 Pumps and pumping equipment
- 3562 Ball and roller bearings
- 3563 Air and gas compressors
- 3564 Blowers and fans
- 3565 Industrial patterns
- 3566 Speed changers, drives, and gears
- 3567 Industrial furnances and ovens
- 3568 Power transmission equipment, n.e.c.
- 3569 General industrial machinery, n.e.c.

- 35F Office, Computing, and Accounting Machines**
 3572 Typewriters
 3573 Electronic computing equipment
 3574 Calculating and accounting machines
 3576 Scales and balances, except laboratory
 3579 Office machines, n.e.c.

- 35G Service Industry Machines and Machine Shops**
 3581 Automatic merchandising machines
 3582 Commercial laundry equipment
 3585 Refrigeration and heating equipment
 3586 Measuring and dispensing pumps
 3589 Service industry machinery, n.e.c.
 3592 Carburetors, pistons, rings, valves
 3599 Machinery, except electrical, n.e.c.

Major Group 36—ELECTRIC AND ELECTRONIC EQUIPMENT

- 36A Electrical Measurement and Distribution Equipment**
 3612 Transformers
 3613 Switchgear and switchboard apparatus
 3621 Motors and generators
 3622 Industrial controls
 3623 Welding apparatus, electric
 3624 Carbon and graphite products
 3629 Electrical industrial apparatus, n.e.c.

- 36B Household Appliances**
 3631 Household cooking equipment
 3632 Household refrigerators and freezers
 3633 Household laundry equipment
 3634 Electric housewares and fans
 3635 Household vacuum cleaners
 3636 Sewing machines
 3639 Household appliances, n.e.c.

- 36C Electric Lighting and Wiring Equipment**
 3641 Electric lamps
 3643 Current-carrying wiring devices
 3644 Noncurrent-carrying wiring devices
 3645 Residential lighting fixtures
 3646 Commercial lighting fixtures
 3647 Vehicular lighting equipment
 3648 Lighting equipment, n.e.c.

- 36D Communication Equipment, Including Radio and TV, and Electronic Components and Accessories**
 3651 Radio and TV receiving sets
 3652 Phonograph records and prerecorded magnetic tapes
 3661 Telephone and telegraph apparatus
 3662 Radio and TV communication equipment
 3671 Electron tubes, receiving type
 3672 Cathode ray television picture tubes

- 36D— Communication Equipment, Including Radio and TV, and Electronic Components and Accessories**
 3673 Electron tubes, transmitting
 3674 Semiconductors and related devices
 3675 Electronic capacitors
 3676 Electronic resistors
 3677 Electronic coils and transformers
 3678 Electronic connectors
 3679 Electronic components, n.e.c.

- 36E Miscellaneous Electrical Equipment and Supplies**
 3691 Storage batteries
 3692 Primary batteries, dry and wet
 3693 X-ray apparatus and tubes
 3694 Engine electrical equipment
 3699 Electrical equipment and supplies, n.e.c.

Major Group 37—TRANSPORTATION EQUIPMENT

- 37A Motor Vehicles and Equipment**
 3711 Motor vehicles and car bodies
 3713 Truck and bus bodies
 3714 Motor vehicle parts and accessories
 3715 Truck trailers

- 37B Aerospace Equipment Including Parts**
 3721 Aircraft
 3724 Aircraft engines and engine parts
 3728 Aircraft equipment, n.e.c.
 3761 Guided missiles and space vehicles
 3764 Space propulsion units and parts
 3769 Space vehicle equipment, n.e.c.

- 37C Ship and Boat Building, Railroad and Miscellaneous Transportation Equipment**
 3731 Ship building and repairing
 3732 Boat building and repairing
 3743 Railroad equipment
 3751 Motorcycles, bicycles, and parts
 3792 Travel trailers and campers
 3795 Tanks and tank components
 3799 Transportation equipment, n.e.c.

Major Group 38—INSTRUMENTS AND RELATED PRODUCTS

- 38A Engineering, Measuring and Controlling, and Optical Instruments**
 3811 Engineering and scientific instruments
 3822 Environmental controls
 3823 Process control instruments
 3824 Fluid meters and counting devices
 3825 Instruments to measure electricity
 3829 Measuring and controlling devices, n.e.c.
 3832 Optical instruments and lenses

INDUSTRY DESCRIPTIONS—Continued

38B Medical Instruments; Ophthalmic Goods; Photographic Equipment; Clocks, Watches, and Watchcases

- 3841 Surgical and medical instruments
- 3842 Surgical appliances and supplies
- 3843 Dental equipment and supplies
- 3851 Ophthalmic goods
- 3861 Photographic equipment and supplies
- 3873 Watches, clocks, and watchcases

Major Group 39—MISCELLANEOUS MANUFACTURING INDUSTRIES

39A Jewelry, Silverware, and Plated Ware

- 3911 Jewelry, precious metal
- 3914 Silverware and plated ware
- 3915 Jewelers' materials and lapidary work

39B Musical Instruments and Parts; Toys and Sporting Goods

- 3931 Musical instruments
- 3942 Dolls

39B— Musical Instruments and Parts; Toys and Sporting Con. Goods

- 3944 Games, toys, and children's vehicles
- 3949 Sporting and athletic goods, n.e.c.

39C Office Supplies, Costume Jewelry, and Notions

- 3951 Pens and mechanical pencils
- 3952 Lead pencils and art goods
- 3953 Marking devices
- 3955 Carbon paper and inked ribbons
- 3961 Costume jewelry
- 3962 Artificial flowers
- 3963 Buttons
- 3964 Needles, pins, and fasteners

39D Miscellaneous Manufactures

- 3991 Brooms and brushes
- 3993 Signs and advertising displays
- 3995 Burial caskets
- 3996 Hard-surface floor coverings
- 3999 Manufacturing industries, n.e.c.

MAJOR GROUP 27

Printing and Publishing

- 27A Newspapers, periodicals, books, and miscellaneous publishing
- 27B Commercial printing and manifold business forms
- 27C Greeting cards; bookbinding; printing trade services

This major group includes establishments engaged in printing by one or more of the common processes, such as letterpress, lithography, gravure, or screen; and those establishments which perform services for the printing trade, such as bookbinding, typesetting, engraving, photoengraving, and electrotyping. This major group also includes establishments engaged in publishing newspapers, books, and periodicals, regardless of whether or not they do their own printing. News syndicates are classified in Service Industries (industry 7351), and textile printing and finishing in Major Group 22.

TABLE 1. General Statistics: 1972 and Earlier Years

(See appendix, Explanation of Terms)

Year and item	Establishments		All employees ¹		Production workers			Value added by manufacture ²	Cost of materials ³	Value of industry shipments ³	Capital expenditures, new ⁴
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours	Wages				
	(number)	(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)
All manufacturing establishments, total: ⁵											
1972.....	42,573	8,816	1,085.5	10,162.1	637.6	1,181.1	5,462.6	20,209.5	10,044.3	30,146.4	1,047.7
1967.....	38,282	8,136	1,052.1	7,323.5	631.6	1,196.1	4,011.3	14,355.1	7,518.5	21,738.4	788.1
1963.....	38,594	7,323	925.1	5,611.5	559.8	1,083.2	3,191.0	10,476.4	5,777.3	16,165.7	463.9

¹The figures for 1939 through 1972 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.²For the period 1954 to 1972, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work in process during the year. For 1921 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture. See "Value Added by Manufacture" in Introduction.³The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.⁴The figures for 1958 to 1972 include expenditures for plants under construction and not yet in operation.⁵See appendix C of the General Summary for the 1972 changes in the Standard Industrial Classification.⁶Similar data are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these establishments are not available for the years 1955 to 1957, 1959 to 1962 or prior to 1949.⁷These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.⁸The establishments classified in the printing and publishing industries reported inventories for the first time in 1957. Therefore, the adjusted value added figures are not precisely comparable, in that the adjusted value added figure does not include the inventories adjustment.⁹The figures for 1899 to 1939 include data for establishments primarily engaged in the manufacture of tags, which are classified in 1947 to 1954 in the pulp, paper and allied products industries.¹⁰The figures for 1899 to 1937 include data for establishments primarily engaged in the manufacture of paper patterns, which are included for later years in the series for the pulp, paper and products industries.¹¹Establishments engaged solely in music publishing were not canvassed in 1933.

TABLE 2. General Statistics by Geographic Area: 1972 and 1967

(See appendix, Explanation of Terms)

1972 code	Industry and geographic area ¹	1972										1967

EXPLANATORY TEXT

NEWSPAPERS, PERIODICALS, BOOKS, AND MISCELLANEOUS PUBLISHING

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2711—Newspapers: Publishing, Publishing and Printing*

2721—Periodicals: Publishing, Publishing and Printing*

2731—Books: Publishing, Publishing and Printing*

2732—Book Printing

2741—Miscellaneous Publishing

The general statistics (employment, payrolls, value of receipts, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing receipts or shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products of establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

As in previous censuses, publishing, printing, and allied activities, other than those performed in government-owned and operated establishments, are included as manufacturing activities. Establishments engaged in publishing newspapers, and establishments primarily engaged in publishing periodicals, books, and miscellaneous publications (including those primarily engaged in book printing) are assigned to one of the five separately described industries below. As noted in the "Introduction," this report does not incorporate any data

reported by religious, social, charitable, educational, and other nonprofit organizations whose employees are not covered under the Social Security System. News syndicates are classified in service industries and their activities are included in the census of business.

The term "publisher" is used to designate the person or organization by whom or in whose name newspapers, periodicals, and other publications are listed. In order to provide the fullest possible coverage of the publishing field in the census of manufactures, a separate report was requested from each publishing establishment, whether or not any printing was done at the publishing location. All establishments engaged in the publishing of one newspaper or more are classified as newspaper publishers, without regard to the ratio of receipts from other activities (e.g., job printing) to their total receipts.

Publishers of newspapers and periodicals were asked to report separately for each of their publications, where possible, information on circulation and dollar receipts by frequency of issue as well as by type of revenue. The more common frequencies of issue were listed on the report forms supplied to all newspapers, and a special inquiry was addressed to publishers of periodicals to provide uniform designation of periodicals by type of issue. Newspaper and periodical publishers were required to break their total revenues into two parts—receipts from subscriptions and sales, and receipts from advertising. "Total revenue" was defined as net after deducting advertising agency commissions, cash discounts, newstand, carrier, and wholesalers' commissions, and other similar items.

As in 1967, the data on number of employees for newspaper and periodical publishing do not include newsboys or carrier boys. Again, periodical and book publishers have been subdivided to group, separately, those who publish only from those who print as well as publish. Newspapers are also subdivided into daily and weekly and other papers. The general operating statistics shown in tables 3, 4, and 5A provide this subindustry treatment for industries 2711, 2721, 2731, and 2741.

INDUSTRY 2711.—NEWSPAPERS (Short Title)

This industry comprises establishments primarily engaged in publishing and printing newspapers. These establishments

*Note that the "short title" for this industry is used throughout the report.

carry on the various operations necessary for issuing newspapers, including the gathering of news and the preparation of editorials and advertisements, but may or may not perform their own printing. Commercial printing is frequently carried on by establishments engaged in publishing and printing newspapers, but, even though the commercial printing may be of major importance, such establishments are included in this industry. For the purposes of the census of manufactures, the term "newspaper" includes those publications issued at regular frequencies which contain news of interest to the general public whether or not they are published in the English language. Establishments not engaged in publishing newspapers, but which print or lithograph newspapers for publishers, are classified in industries 2751, 2752, or 2754. News syndicates are classified in service industries (industry 7351). For a detailed list of products of industry 2711, refer to table 6A, product codes 27111 01 to 27114 98.

The code number as well as the definition of this industry was unchanged between 1972 and 1967.

Publications have been classified as periodicals (industry 2721) rather than as newspapers if their news and editorial presentations do not appear to be directed to the public at large. Among the types of publications sometimes considered newspapers, but treated in the census as periodicals, are the following: Trade journals; house organs, local church or school papers, and like publications with very limited or specialized news treatment. Generally publications issued by nonprofit organizations (educational, religious, charitable, labor, business, professional, etc.) are classified as periodicals, as are magazine and comic supplements for Sunday newspapers.

Receipts of the Newspapers Industry in 1972 totaled \$8,270.1 million. This included receipts from newspapers (primary products) valued at \$7,908.4 million, receipts from other activities (secondary products) valued at \$291.6 million, and miscellaneous receipts of \$70.1 million.

Receipts from newspapers (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total receipts (primary and secondary). The industry specialization ratio in 1967 was also 97 percent. Secondary receipts for this industry in 1972 consisted mainly of commercial printing, lithographic (\$132.0 million) and commercial printing, letterpress (\$110.2 million).

Receipts from newspapers (primary products) for establishments classified in industry 2711 in 1972 represented 100 percent (coverage ratio) of these receipts valued at \$7,908.4 million. In 1967, the coverage ratio was also 100 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and

sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2711, these establishments accounted for 6 percent of value of receipts.

INDUSTRY 2721.—PERIODICALS (Short title)

This industry comprises establishments primarily engaged in publishing periodicals, or in preparing, publishing, and printing periodicals. These establishments carry on the various operations necessary for issuing periodicals, but may or may not perform their own printing. Establishments not engaged in publishing periodicals, but which print or lithograph periodicals for publishers are classified in industries 2751, 2752, or 2754.

Data on the periodical publishing activities of nonprofit organizations (religious, educational, social, charitable, etc.) have been included to the extent that the employees of such organizations are covered under the Social Security System. For the distinction between newspapers and periodicals which has been applied in classifying establishments for the census of manufactures, see the foregoing statements under industry 2711, Newspapers. For a detailed list of products of industry 2721, refer to table 6A, product codes 27211 12 to 27217 37.

The code number as well as the definition of this industry was unchanged between 1972 and 1967.

Receipts of the Periodicals Industry in 1972 totaled \$3,521.3 million. This included receipts from periodicals (primary products) valued at \$3,025.3 million, receipts from other activities (secondary products) valued at \$387.0 million, and miscellaneous receipts (mainly resales) of \$109.0 million.

Receipts from periodicals (primary products) in 1972 represented 89 percent (specialization ratio) of the industry's total receipts (primary and secondary). The industry specialization ratio in 1967 was also 89 percent. Secondary receipts for this industry in 1972 consisted mainly of book publishing (\$333.9 million) and miscellaneous publishing (\$33.7 million).

Receipts from periodicals (primary products) for establishments classified in industry 2721 in 1972 represented 95 percent (coverage ratio) of these receipts valued at \$3,197.7 million received by all industries. In 1967, the coverage ratio was 97 percent. Other industries with receipts from periodicals consisted mainly of industry 2731, Book Publishing (\$136.5 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed

from industry averages. For industry 2721, these establishments accounted for 6 percent of value of receipts.

INDUSTRY 2731.—BOOK PUBLISHING (Short Title)

This industry comprises establishments primarily engaged in publishing and printing books and pamphlets. Establishments primarily engaged in printing or in printing and binding (but not publishing) books and pamphlets are classified in industry 2732, Book Printing.

Industry 2731 also includes data on book publishing activities obtained from nonprofit organizations whose employees are covered under the Social Security System and were able to report their book publishing operations as a separate establishment. For a detailed list of the type of receipts classified as primary to industry 2731, refer to table 6A, product codes 27311 11 to 27319 59.

The data presented in table 6A for number of books sold represent the total number of books sold (shipped and billed) by publishers during 1972, without regard to whether these books were actually published or printed in 1972. The value figures shown in this table and in tables 6B and 6C are net publishers' receipts after deducting cash discounts, returns, and allowances; i.e., they represent net sales.

"Books" are considered to include all collections of 49 or more pages, exclusive of the cover, bound by any method, and all hardboard collections, irrespective of the number of pages. (The designation "hardbound" describes books which are bound with paper over board, cloth over board, and artificial or genuine leather.) "Pamphlets" are defined to mean any collection to be offered for sale of at least 5 but less than 49 paperbound pages.

The code number as well as the definition of this industry was unchanged between 1972 and 1967.

Receipts of the Book Publishing Industry in 1972 totaled \$2,856.8 million. This included receipts from book publishing (primary products) valued at \$2,512.1 million, receipts from other activities (secondary products) valued at \$191.1 million, and miscellaneous receipts of \$153.6 million.

Receipts from book publishing (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total receipts (primary and secondary). The industry specialization ratio in 1967 was 95 percent. Secondary receipts for this industry in 1972 consisted mainly of periodicals (\$136.5 million) and miscellaneous publishing (\$16.7 million).

Receipts from book publishing (primary products) for establishments classified in industry 2731 in 1972 represented 86 percent (coverage ratio) of these receipts valued at \$2,915.4 million received by all industries. In 1967, the coverage ratio was also 86 percent. Other industries with receipts from book publishing consisted mainly of industry 2721, Periodicals (\$333.9 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2731, these establishments accounted for 6 percent of value of receipts.

INDUSTRY 2732.—BOOK PRINTING

This industry comprises establishments primarily engaged in printing only or in printing and binding books and pamphlets, but not engaged in publishing. Establishments primarily engaged in publishing, or in publishing and printing books and pamphlets, are classified in industry 2731. Establishments engaged in both printing and binding books, but primarily binding books printed elsewhere, are classified in industry 2789.

Establishments classified in industry 2732 are similar in character to some establishments primarily engaged in commercial printing (industries 2751, 2752, and 2754). The distinction is that all the establishments classified in industry 2732 derive the greater part of their revenue from printing books and pamphlets, while such operations are secondary activities for establishments classified in industries 2751, 2752, and 2754. For a detailed list of products of industry 2732, refer to table 6A, product codes 27321 11 to 27327 71.

The code number as well as the definition of this industry was unchanged between 1972 and 1967.

Receipts of the Book Printing Industry in 1972 totaled \$937.6 million. This included receipts from book printing (primary products) valued at \$762.9 million, receipts from other activities (secondary products) valued at \$153.8 million, and miscellaneous receipts (mainly resales) of \$20.9 million.

Receipts from book printing (primary products) in 1972 represented 83 percent (specialization ratio) of the industry's total receipts (primary and secondary). The industry specialization ratio in 1967 was 81 percent. Secondary receipts for this industry in 1972 consisted mainly of commercial printing, lithographic (\$106.7 million) and commercial printing, letterpress (\$17.6 million).

Receipts from book printing (primary products) for establishments classified in industry 2732 in 1972 represented 73 percent (coverage ratio) of these receipts valued at \$1,049.9 million received by all industries. In 1967, the coverage ratio was 70 percent. Other industries with receipts from book printing consisted mainly of industry 2752, Commercial Printing, Lithographic (\$206.9 million) and industry 2751, Commercial Printing, Letterpress (\$45.7 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2732, these establishments accounted for 5 percent of value of receipts.

INDUSTRY 2741.—MISCELLANEOUS PUBLISHING

This industry comprises establishments primarily engaged in miscellaneous publishing activities, not elsewhere classified, whether or not engaged in printing. Establishments primarily engaged in offering financial, credit, or other business services, and which may publish directories as part of this service, are not included in this industry but are classified in service industries. For a detailed list of products of industry 2741, refer to table 6A, product codes 27411 13 to 27413 98.

The code number as well as the definition of this industry was unchanged between 1972 and 1967.

Receipts of the Miscellaneous Publishing Industry in 1972 totaled \$1,070.2 million. This included receipts from miscel-

laneous publishing (primary products) valued at \$983.3 million, receipts from other activities (secondary products) valued at \$48.8 million, and miscellaneous receipts of \$38.1 million.

Receipts from miscellaneous publishing (primary products) in 1972 represented 95 percent (specialization ratio) of the industry's total receipts (primary and secondary). The industry specialization ratio in 1967 was 93 percent. Secondary receipts for this industry in 1972 consisted mainly of book publishing (\$29.1 million) and periodicals (\$13.4 million).

Receipts from miscellaneous publishing (primary products) for establishments classified in industry 2741 in 1972 represented 93 percent (coverage ratio) of these receipts valued at \$1,058.3 million received by all industries. In 1967, the coverage ratio was 89 percent. Other industries with receipts from miscellaneous publishing consisted mainly of industry 2721, Periodicals (\$33.7 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2741, these establishments accounted for 13 percent of value of receipts.

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 2711	Industry 2721	Industry 2731	Industry 2732	Industry 2741
1972.....	7,461	2,451	1,120	674	1,964
1967.....	7,589	2,430	963	720	1,433
1963.....	7,982	2,562	936	662	1,308

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972—Continued

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

(D) Withheld to avoid disclosing figures for individual companies.

(Z) Less than half of the unit of measurement shown.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Receipts; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of receipts					Value of primary product receipts			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

TABLE 5C. Industry-Product Analysis—Receipts by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

27413 00	Other miscellaneous publishing, n.s.k.....	6.6	4.9
27410 00	Miscellaneous publishing, n.s.k., for companies with 10 employees or more. (See note.).....	95.7	36.2
27410 02	Miscellaneous publishing, n.s.k., for companies with less than 10 employees. (See note.).....	75.5	33.0

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review. (Z) Less than half of the unit of measurement shown (less than 0.1 when rounded).

¹Includes paid, free, bulk, etc. The term "issue" has been defined to mean the sum of all "editions" published on a given day, in the case of the establishment publishing newspapers on a combined frequency-of-issue basis (morning and Sunday, evening and Sunday, etc.). Separate average circulation figures were figured for the morning editions, evening editions, and Sunday editions.

²Includes all daily and Sunday newspapers published in the United States whether in English or foreign languages. (See text for a more complete description of what constitutes a newspaper in the census of manufactures.)

³In 1972 and 1967 establishments with less than 10 employees were not required to file a report specifying their source of receipts.

⁴Circulation data for weekly and other newspapers is not shown because this information was not reported by many small newspapers.

TABLE 6B. Product Classes—Value of Receipts of All Manufacturing Establishments, by Geographic Area:
1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value of Receipts of All Manufacturing Establishments, by Geographic Area:
1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²In 1967, establishments with less than 10-employees were not required to file a report specifying their source of receipts as had been required in previous censuses. A substantial portion of code 27110 would be included in codes 27113 and 27114 if they had reported.

³The individual product codes included in this class of product for 1972 differ from the 1967 definition. Products shifting into this class of product represent approximately 14 percent of the total 1972 shipments at the U.S. level.

EXPLANATORY TEXT

COMMERCIAL PRINTING AND MANIFOLD BUSINESS FORMS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2751—Commercial Printing, Letterpress and Screen*
2752—Commercial Printing, Lithographic
2753—Engraving and Plate Printing
2754—Commercial Printing, Gravure
2761—Manifold Business Forms

The general statistics (employment, payroll, cost of materials, value of receipts, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing receipts by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products by establishments classified in the specified industry and also the value of primary products of the industry as secondary products by establishments classified in other industries.

INDUSTRY 2751.—COMMERCIAL PRINTING, LETTERPRESS (Short Title)

This industry comprises establishments primarily engaged in letterpress and screen commercial or job printing, including flexographic. This industry includes general printing shops as well as shops specializing in printing newspapers and periodicals for others, and those which specialize in screen printing.

Establishments primarily engaged in printing books, without publishing, are classified in industry 2732 (Book Printing) and greeting cards in industry 2771 (Greeting Card Publishing).

*Note that the "short title" for this industry is used throughout the report.

Establishments primarily engaged in printing from lithographic plates are classified in industry 2752, and gravure and rotogravure printing in industry 2754. For a detailed list of products of industry 2751, refer to table 6A, product codes 27511 15 to 27519 98.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. However, the SIC number and title are unchanged. Industry 2751 was split into two separate industries: Commercial Printing, Letterpress, (SIC 2751) and Commercial Printing, Gravure, (SIC 2754—old product classes 27517 and 27518). The effect of the revisions on the data are summarized in table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, 13,342 establishments with 153.8 thousand total employment and \$2,444.9 million value added would have been classified in industry 2751, Commercial Printing, Letterpress, under the old SIC.

Receipts of the Commercial Printing, Letterpress, Industry in 1972 totaled \$3,288.6 million. This included receipts from commercial printing, letterpress, (primary receipts) valued at \$2,785.1 million, receipts from other products (secondary receipts) valued at \$421.4 million, and miscellaneous receipts (mainly resales) of \$82.1 million.

Receipts from commercial printing, letterpress, (primary receipts) in 1972 represented 87 percent (specialization ratio) of the industry's total receipts (primary and secondary). The industry specialization ratio in 1967 was 86 percent. Secondary receipts of this industry in 1972 consisted mainly of receipts from commercial printing, lithographic, (\$197.3 million).

Receipts from commercial printing, letterpress, (primary receipts) from establishments classified in industry 2751 in 1972 represented 82 percent (coverage ratio) of these receipts valued at \$3,404.8 million by all industries. In 1967, the coverage ratio was 83 percent. Other industries with receipts, from commercial printing, letterpress, consisted mainly of industry 2752, Commercial Printing, Lithographic, (\$282.7 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2751, these establishments accounted for 32 percent of value of receipts.

INDUSTRY 2752.—COMMERCIAL PRINTING, LITHOGRAPHIC

This industry comprises establishments primarily engaged in printing by the lithographic process. The greater part of the work in this industry is performed on a job or custom basis, but, in some cases, lithographed calendars, maps, posters, decalcomanias, etc., are made for sale. Offset printing, photo-offset printing, and photolithographing are also included in this industry.

Establishments primarily engaged in lithographing books and pamphlets, without publishing, are classified in industry 2732 (Book Printing), and greeting cards in industry 2771 (Greeting Card Publishing). Establishments primarily engaged in preparing lithographic plates and in related services are classified in industry 2795 (Lithographic Platemaking Services). For a detailed list of products of industry 2752, refer to table 6A, product codes 27521 12 to 27526 99.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. However, the SIC number and title are unchanged. Industry 2752 was split into two separate industries: Commercial Printing, Lithographic, (SIC 2752) and Lithographic Platemaking and Related Services (SIC 2795—old product class 27527). The effect of the revisions on the data are summarized in table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, 8,692 establishments with 186.8 thousand total employment and \$3,204.9 million value added would have been classified in industry 2752, Commercial Printing, Lithographic, under the old SIC.

Receipts of the Commercial Printing, Lithographic, Industry in 1972 totaled \$5,124.8 million. This included receipts from commercial printing, lithographic, (primary receipts) valued at \$4,334.7 million, receipts from other products (secondary receipts) valued at \$653.8 million, and miscellaneous receipts (mainly resales) of \$136.3 million.

Receipts from commercial printing, lithographic, (primary receipts) in 1972 represented 87 percent (specialization ratio) of the industry's total receipts (primary and secondary). The industry specialization ratio in 1967 was 82 percent. Secondary receipts of this industry in 1972 consisted mainly of receipts from commercial printing, letterpress, (\$282.7 million) and book printing (\$194.3 million).

Receipts from commercial printing, lithographic, (primary receipts) from establishments classified in industry 2752 in 1972 represented 88 percent (coverage ratio) of these receipts valued at \$4,919.6 million by all industries. In 1967, the coverage ratio was 80 percent. Other industries with receipts from commercial printing, lithographic, consisted mainly of industry 2751, Commercial Printing, Letterpress, (\$197.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2752, these establishments accounted for 13 percent of value of receipts.

INDUSTRY 2753.—ENGRAVING AND PLATE PRINTING

This industry comprises establishments primarily engaged in engraving and etching steel, copper, wood, or rubber plates; in using the plates to print stationery, visiting and other cards, invitations, maps, etc.; and in making woodcuts for use in printing illustrations, posters, etc. For a detailed list of products of industry 2753, refer to table 6A, product codes 27530 12 to 27530 75.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of services and other receipts of the Engraving and Plate Printing Industry in 1972 totaled \$201.6 million. This included receipts from engraving and plate printing (primary receipts) valued at \$178.2 million, receipts from other products (secondary receipts) valued at \$15.9 million, and miscellaneous receipts (mainly resales) of \$7.5 million.

Receipts from engraving and plate printing (primary receipts) in 1972 represented 92 percent (specialization ratio) of the industry's total receipts (primary and secondary). The industry specialization ratio in 1967 was 91 percent. Secondary receipts of this industry in 1972 consisted mainly of receipts from commercial printing, letterpress, (\$3.8 million) and commercial printing, lithographic, (\$3.1 million).

Receipts from engraving and plate printing (primary receipts) from establishments classified in industry 2753 in 1972 represented 87 percent (coverage ratio) of these receipts valued at \$205.0 million by all industries. In 1967, the coverage ratio was 81 percent. Other industries with receipts from engraving and plate printing consisted mainly of industry 2752, Commercial Printing, Lithographic, (\$7.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2753, these establishments accounted for 16 percent of value of receipts.

INDUSTRY 2754.—COMMERCIAL PRINTING, GRAVURE

This industry comprises establishments primarily engaged in gravure printing. This industry also includes establishments primarily engaged in preparing gravure plates and cylinders. Establishments primarily engaged in printing by the lithographic process are classified in industry 2752, and letterpress and screen printing, in industry 2751. For a detailed list of products of industry 2754, refer to table 6A, product codes 27541 11 to 27545 71.

The code number for this industry was changed in the 1972 revision of the SIC manual from the previous classification system. Industry 2754, Commercial Printing, Gravure, had been classified under product classes 27517 and 27518 as a part of industry 2751, Commercial Printing, Letterpress. The effect of the revisions on the data are summarized in table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, 13,342 establishments with 153.8 thousand total employment and \$2,444.9 million value added would have been classified in industry 2751, Commercial Printing, Letterpress, under the old SIC.

Receipts of the Commercial Printing, Gravure, Industry in 1972 totaled \$697.6 million. This included receipts from commercial printing, gravure, (primary receipts) valued at \$598.3 million, receipts from other products (secondary receipts) valued at \$91.5 million, and miscellaneous receipts (mainly resales) of \$7.8 million.

Receipts from commercial printing, gravure, (primary receipts) in 1972 represented 87 percent (specialization ratio) of the industry's total receipts (primary and secondary). Secondary receipts of this industry in 1972 consisted mainly of receipts from commercial printing, letterpress, (\$35.6 million).

Receipts from commercial printing, gravure, (primary receipts) from establishments classified in industry 2754 in 1972 represented 79 percent (coverage ratio) of these receipts valued at \$759.1 million by all industries. Other industries with receipts from commercial printing, gravure, consisted mainly of industry 2751, Commercial Printing, Letterpress, (\$86.5 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. Normally, for these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics con-

structed from industry averages. As previously stated, industry 2754 was formerly a part of industry 2751 and, thus, the administrative records of the other Government agencies (for which no information was available for reclassification) still have these establishments classified in 2751. Consequently, for industry 2754, these data are not available.

INDUSTRY 2761.—MANIFOLD BUSINESS FORMS

This industry comprises establishments primarily engaged in designing and printing, by any process, special forms for use in the operation of a business, in single and multiple sets, including carbonized or interleaved with carbon or otherwise processed for multiple reproduction. For a detailed list of products of industry 2761, refer to table 6A, product codes 27612 13 to 27617 79.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Manifold Business Forms Industry in 1972 totaled \$1,429.7 million. This included shipments of manifold business forms (primary products) valued at \$1,267.9 million, shipments of other products (secondary products) valued at \$92.0 million, and miscellaneous receipts (mainly resales) of \$69.8 million.

Shipments of manifold business forms (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 91 percent. Secondary receipts of this industry in 1972 consisted mainly of receipts from commercial printing, lithographic, (\$34.3 million) and commercial printing, letterpress, (\$33.0 million).

Shipments of manifold business forms (primary products) from establishments classified in industry 2761 in 1972 represented 92 percent (coverage ratio) of these products valued at \$1,381.9 million shipped by all industries. In 1967, the coverage ratio was 90 percent. Other industries shipping manifold business forms consisted mainly of industry 2752, Commercial Printing, Lithographic, (\$76.0 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2761, these establishments accounted for 3 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 2751	Industry 2752	Industry 2753	Industry 2754	Industry 2761
1972.....	13,038	8,159	542	120	533
1967.....	11,955	6,718	569	(NA)	454
1963.....	11,979	6,738	574	(NA)	439

(NA) Not available. (S) Withheld because the data did not meet publication standards. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of receipts	Establishments		All employees	Value added by manufacture	Value of receipts
	Total	With 20 employees or more				Total	With 20 employees or more			
	(number)	(number)	(1,000)	(million dollars)	(million dollars)	(number)	(number)	(1,000)	(million dollars)	(million dollars)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Receipts; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the receipts of products representing the largest amount considered as primary to an industry. Frequently the establishment receipts comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of receipts					Value of primary product receipts

27615 51	Custom autographic register (any form of any number of parts in continuous folded packs sold for use in autographic register machine).....	22.9	124.1
27615 00	Custom continuous forms with or without carbon, marginally punched or not marginally punched, n.s.k.....	5.5	2.7

See footnotes at end of table.

TABLE 6A. Products and Product Classes—Value of Receipts by All Producers: 1972 and 1967—Continued

(Includes value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

1972 product code	Product	Total receipts including interplant transfers (million dollars)	
		1972	1967
2761- --	MANIFOLD BUSINESS FORMS--Continued		
27617 --	Stock Continuous Forms.....	204.9	162.9
	Stock shelf forms:		
27617 61	One part.....	50.3	81.7
	Multiple parts:		
27617 63	One-time carbon.....	114.4	
27617 65	Carbonless.....	4.3	
	Stock format forms, shelf-type stock forms specially manufactured to supply such additional features as fastening, file hole punching, perforation, ink colors, paper color or sequence, and/or number of parts, but which are not further identified by customer:		
27617 71	One part.....	4.8	81.2
	Multiple parts:		
27617 73	One-time carbon.....	20.5	
27617 75	Carbonless.....	4.5	
27617 79	All other stock forms, including stock tabulating cards, fanfold, and autographic register.....	2.8	(¹)
27617 00	Stock continuous forms, n.s.k.....	3.3	-
27610 00	Manifold business forms, n.s.k., for companies with 10 employees or more. (See note.).....	47.6	18.7
27610 02	Manifold business forms, n.s.k., for companies with less than 10 employees. (See note.).....	10.1	5.3

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review.

¹For continuous tabulating cards, fanfold, and autographic register forms, no distinction was made in 1967 as to whether or not the form was "custom" or "stock." While all data are included under "custom" for 1967, a portion would be "stock."

TABLE 6B. Product Classes—Value of Receipts by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value of Receipts by All Manufacturing Establishments, by Geographic Area:
1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²The individual product codes included in this class of product for 1972 differ from the 1967 definition. Products shifting into or out of this class of product represent approximately 13 percent of the total 1967 receipts at the U.S. level.

³The individual product codes included in this class of product for 1972 differ from the 1967 definition. Products shifting into or out of this class of product represent approximately 5 percent of the total 1967 receipts at the U.S. level.

EXPLANATORY TEXT

GREETING CARDS; BOOKBINDING; PRINTING TRADE SERVICES

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2771—Greeting Card Publishing
- 2782—Blankbooks, Looseleaf Binders, and Devices*
- 2789—Bookbinding and Related Work
- 2791—Typesetting
- 2793—Photoengraving
- 2794—Electrotyping and Stereotyping
- 2795—Lithographic Platemaking and Related Services*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2771.—GREETING CARD PUBLISHING

This industry comprises establishments primarily engaged in the designing, publishing, and printing, by any process, of greeting cards for all occasions. For a detailed list of products of industry 2771, refer to table 6A, product codes 27711 11 to 27712 51.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

*Note that the "short title" for this industry is used throughout the report.

Value of shipments and other receipts of the Greeting Card Publishing Industry in 1972 totaled \$774.4 million. This included receipts from greeting card publishing and printing (primary products) valued at \$565.7 million, shipments of other products (secondary products) valued at \$180.8 million, and miscellaneous receipts (mainly resales) of \$27.9 million.

Receipts from greeting card publishing and printing (primary products) in 1972 represented 76 percent (specialization ratio) of the industry's total receipts (primary and secondary). The industry specialization ratio in 1967 was 87 percent. Secondary products shipped by this industry in 1972 consisted mainly of converted paper products, n.e.c. (\$33.9 million).

Receipts from greeting card publishing and printing (primary products) from establishments classified in industry 2771 in 1972 represented 97 percent (coverage ratio) of these products valued at \$583.5 million shipped by all industries. In 1967, the coverage ratio was 93 percent. Other industries reporting greeting cards consisted mainly of industry 2752, Commercial Printing, Lithographic (\$8.4 million); and industry 2649, Converted Paper Products, N.E.C. (\$5.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2771, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2782.—BLANKBOOKS AND LOOSELEAF BINDERS (Short Title)

This industry comprises establishments primarily engaged in manufacturing blankbooks, looseleaf devices, and library binders; and in ruling paper. For a detailed list of products of industry 2782, refer to table 6A, product codes 27821 11 to 27822 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Blankbooks and Looseleaf Binders Industry in 1972 totaled \$586.0 million. This included shipments of blankbooks and looseleaf binders (primary products) valued at \$507.7 million, shipments of other products (secondary products) valued at \$64.6 million, and miscellaneous receipts (mainly resales) of \$13.7 million.

Shipments of blankbooks and looseleaf binders (primary products) in 1972 represented 89 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 86 percent. Secondary products shipped by this industry in 1972 consisted mainly of stationery products (\$18.2 million); and commercial printing, lithographic (\$9.6 million).

Shipments of blankbooks and looseleaf binders (primary products) from establishments classified in industry 2782 in 1972 represented 90 percent (coverage ratio) of these products valued at \$566.2 million shipped by all industries. In 1967, the coverage ratio was 88 percent. Other industries shipping blankbooks and looseleaf binders consisted mainly of industry 2648, Stationery Products (\$23.6 million); industry 2752, Commercial Printing, Lithographic (\$8.0 million); and industry 2789, Bookbinding and Related Work (\$9.4 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2782, these establishments accounted for 5 percent of value of shipments.

INDUSTRY 2789.—BOOKBINDING AND RELATED WORK

This industry comprises establishments primarily engaged in edition, trade, job, and library bookbinding; in book or paper bronzing, gilding, and edging; in map and sample mounting; and other services related to bookbinding. Establishments primarily engaged in binding books printed elsewhere are classified in this industry, but those primarily binding books printed in the same establishment are classified in SIC group 273, Books. For a detailed list of products of industry 2789, refer to table 6A, product codes 27891 11 to 27892 91.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Bookbinding and Related Work Industry in 1972 totaled \$377.2 million. This included receipts from bookbinding and related work (primary products) valued at \$328.7 million, shipments of other products (secondary products) valued at \$16.3 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$32.2 million.

Receipts from bookbinding and related work (primary products) in 1972 represented 95 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 94

percent. Secondary products shipped by this industry in 1972 consisted mainly of blankbooks and looseleaf binders (\$9.4 million); and commercial printing, letterpress (\$2 to \$5 million).

Receipts from bookbinding and related work (primary products) from establishments classified in industry 2789 in 1972 represented 89 percent (coverage ratio) of these products valued at \$369.2 million shipped by all industries. In 1967, the coverage ratio was also 89 percent. Other industries reporting bookbinding and related work consisted mainly of industry 2731, Book Publishing (\$18.4 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2789, these establishments accounted for 12 percent of value of shipments.

INDUSTRY 2791.—TYPESETTING

This industry comprises establishments primarily engaged in typesetting for the trade, including advertisement typesetting. For a detailed list of products of industry 2791, refer to table 6A, product codes 27910 11 to 27910 15.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of services and other receipts of the Typesetting Industry in 1972 totaled \$481.3 million. This included receipts from typesetting (primary products) valued at \$461.6 million, other services (secondary products) valued at \$12.3 million, and miscellaneous receipts (mainly resales) of \$7.4 million.

Receipts from typesetting (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 95 percent. Other receipts of this industry in 1972 consisted mainly of commercial printing, lithographic (\$2.8 million).

Receipts from typesetting (primary products) from establishments classified in industry 2791 in 1972 represented 91 percent (coverage ratio) of these products valued at \$508.7 million shipped by all industries. In 1967, the coverage ratio was 92 percent. Other industries reporting typesetting consisted mainly of industry 2752, Commercial Printing, Lithographic (\$15.0 million); and industry 2732, Book Printing (\$11.9 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail

portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2791, these establishments accounted for 16 percent of value of shipments.

INDUSTRY 2793.—PHOTOENGRAVING

This industry comprises establishments primarily engaged in preparing photoengraving plates (halftones and linecuts). These establishments do not, as a rule, print from the plates which they make, but prepare them for use by others. For a detailed list of products of industry 2793, refer to table 6A, product codes 27930 13 to 27930 19.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Photoengraving Industry in 1972 totaled \$229.6 million. This included receipts from photoengraving (primary products) valued at \$186.4 million, other services (secondary products) valued at \$39.4 million, and miscellaneous receipts (mainly resales) of \$3.8 million.

Receipts from photoengraving (primary products) in 1972 represented 84 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 94 percent. Other services performed by this industry in 1972 consisted mainly of lithographic platemaking services (\$24.2 million); and engraving and plate printing (\$4.6 million).

Receipts from photoengraving (primary products) from establishments classified in industry 2793 in 1972 represented 83 percent (coverage ratio) of these products valued at \$221.3 million shipped by all industries. In 1967, the coverage ratio was 91 percent. Other industries reporting photoengraving consisted mainly of industry 2711, Newspapers (\$8.5 million); industry 2754, Commercial Printing, Gravure (\$7.3 million); and industry 2795, Lithographic Platemaking Services (\$10.4 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2793, these establishments accounted for 12 percent of the value of shipments.

INDUSTRY 2794.—ELECTROTYPING AND STEREOTYPING

This industry comprises establishments primarily engaged in preparing electrotypes and stereotype plates. These establishments do not, as a rule, print from the plates which they make, but prepare them for use by others. For a detailed list of products of industry 2794, refer to table 6A, product codes 27940 11 to 27940 51.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Electrotyping and Stereotyping Industry in 1972 totaled \$36.8 million. This included receipts from electrotyping and stereotyping (primary products) valued at \$27.4 million, other services (secondary products) valued at \$6.5 million, and miscellaneous receipts (mainly resales) of \$2.9 million.

Receipts from electrotyping and stereotyping (primary products) in 1972 represented 81 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 89 percent. Other services performed by this industry in 1972 consisted mainly of engraving and plate printing (\$2.7 million).

Receipts from electrotyping and stereotyping (primary products) from establishments classified in industry 2794 in 1972 represented 77 percent (coverage ratio) of these products valued at \$35.5 million shipped by all industries. In 1967, the coverage ratio was 85 percent. Other industries reporting electrotyping and stereotyping services consisted mainly of industry 2793, Photoengraving (\$3.0 million); and industry 2791, Typesetting (\$2.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2794, these establishments accounted for 11 percent of value of shipments.

INDUSTRY 2795.—LITHOGRAPHIC PLATEMAKING SERVICES (Short Title)

This industry comprises establishments primarily engaged in manufacturing lithographic plates for use by printing establishments. For a detailed list of products of industry 2795, refer to table 6A, product codes 27951 13 to 27952 41.

The code number for this industry was changed in the 1972 revision of the SIC manual from the previous classification system. Industry 2795, Lithographic Platemaking Services, had been classified under product class 27527 as a part of the Commercial Printing, Lithographic, Industry, 2752. The effect of the revisions on the data are summarized in table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, 325 establishments with 8.5 thousand total employment and \$176.9 million value added would have been classified in industry 2752, Commercial Printing, Lithographic, under the old SIC.

Value of shipments and other receipts of the Lithographic Platemaking Services Industry in 1972 totaled \$256.7 million. This included receipts from lithographic platemaking (primary products) valued at \$218.1 million, other services (secondary products) valued at \$31.7 million, and miscellaneous receipts (mainly resales) of \$6.9 million.

Receipts from lithographic platemaking (primary products) in 1972 represented 87 percent (specialization ratio) of the industry's total product shipments (primary and secondary).

Other services performed by this industry in 1972 consisted mainly of photoengraving services (\$10.4 million).

Receipts from lithographic platemaking (primary products) from establishments classified in industry 2795 in 1972 represented 83 percent (coverage ratio) of these products valued at \$263.0 million shipped by all industries. Other industries reporting lithographic platemaking (primary products) consisted mainly of industry 2793, Photoengraving (\$20.5 million); and industry 2752, Commercial Printing, Lithographic (\$9.9 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. Normally for these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. As previously stated, industry 2795 was formerly a part of 2752 and, thus, the administrative records of the other Government agencies (for which no information was available for reclassification) still have these establishments classified in 2752. Consequently, for industry 2795 these data are not available.

TABLE 1A. General Statistics: 1958 to 1972

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted:

	Industry 2771	Industry 2782	Industry 2789	Industry 2791	Industry 2793	Industry 2794	Industry 2795
1972....	186	376	990	1,858	581	72	329
1967....	203	402	1,008	1,518	732	124	(NA)
1963....	239	380	1,038	1,271	872	170	(NA)

(NA) Not available. (S) Withheld because the data did not meet publication standards. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²In the 1967 Census of Manufactures, data for this industry were classified in industry 2752 as product class 27527.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of receipts or shipments (dollars)	Cost of materials and payrolls per dollar of receipts or shipments (dollars)	Assets per dollar of receipts or shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of receipts	Establishments		All employees	Value added by manufacture	Value of receipts
	Total	With 20 employees or more				Total	With 20 employees or more			
	(number)	(number)	(1,000)	(million dollars)	(million dollars)	(number)	(number)	(1,000)	(million dollars)	(million dollars)
New industry 2795.--Lithographic Platemaking Services.....	335	124	8.9	184.9	256.7	(X)	(X)	(X)	(X)	(X)
Old industry 2752.--Commercial Printing, Lithographic....	325	117	8.5	176.9	246.1	8,699	2,238	189.5	3,255.4	5,276.2
All other industries ¹	10	7	.4	8.0	10.6	(X)	(X)	(X)	(X)	(X)

(X) Not applicable.

¹These data are for a miscellaneous group of establishments that were classified in the industry because of shifts in their product mix.

500 TO 999 EMPLOYEES	1	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment—generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)				
2771	GREETING CARD PUBLISHING										
	ENTIRE INDUSTRY	199	23.5	191.5	12.4	24.1	93.9	527.0	261.4	774.4	40.4

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Greeting card publishing (SIC 2771)	Blankbooks and looseleaf binders (SIC 2782)	Bookbinding and related work (SIC 2789)	Typesetting (SIC 2791)	Photoen- graving (SIC 2793)	Electro- typing and stereotyping (SIC 2794)	Lithographic platemaking services (SIC 2795)	Other industries

27952 --	Lithographic Services:		
27952 31	Color corrected process positives or negatives on film.....	94.4	12.9
27952 39	All other film.....	24.3	
27952 41	Assembled flats for platemaking.....	12.9	
27950 00	Lithographic platemaking, n.s.k., for companies with 10 employees or more. (See note.).....	19.1	(NA)
27950 02	Lithographic platemaking, n.s.k., for companies with less than 10 employees. (See note.).....	(NA)	(NA)

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

(X) Not applicable. (NA) Not available.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

- Represents zero. (NA) Not available. (S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

TABLE 7. Materials Consumed, by Kind: 1972 and 1967

(NA) Not available.

¹This item represents the total cost of materials for establishments that did not report detailed materials data.

MAJOR GROUP 28

Chemicals and Allied Products

- 28A Industrial inorganic chemicals
- 28B Plastics materials, synthetic rubber, and man-made fibers
- 28C Drugs
- 28D Soaps, cleaners, and toilet goods
- 28E Paints and allied products
- 28F Industrial organic chemicals
- 28G Agricultural chemicals
- 28H Miscellaneous chemical products

This major group includes establishments producing basic chemicals and establishments manufacturing products by predominantly chemical processes. Establishments classified in this major group manufacture three general classes of products: (1) Basic chemicals such as acids, alkalies, salts, and organic chemicals; (2) chemical products to be used in further manufacture such as synthetic fibers, plastics materials, dry colors, and pigments; (3) finished chemical products to be used for ultimate consumption such as drugs, cosmetics, and soaps; or to be used as materials or supplies in other industries such as paints, fertilizers, and explosives. The mining of natural rock salt is classified in mining industries. Establishments primarily engaged in manufacturing nonferrous metals and high-percentage ferroalloys are classified in Major Group 33; silicon carbide in Major Group 32; baking powder, other leavening compounds, and starches in Major Group 20; and artists' colors in Major Group 39. Establishments primarily engaged in packaging, repackaging, and bottling of purchased chemical products, but not engaged in manufacturing chemicals and allied products, are classified in trade industries.

TABLE 1. General Statistics: 1972 and Earlier Years

(See appendix, Explanation of Terms)

Year and item	Establishments		All employees ¹		Production workers			Value added by manufacture ²	Cost of materials ³	Value of industry shipments ³	Capital expenditures, new ⁴
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours	Wages				
	(number)	(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)
All manufacturing establishments, total: ⁵											
1972 ⁶	12,403	4,980	995.0	10,908.2	525.0	1,053.7	4,753.9	32,413.9	25,085.5	57,349.6	2,728.4

(X) Not applicable. (NA) Not available.

¹The figures for 1939 through 1972 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

²For the period 1954 to 1972, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work in process during the year. For 1921 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture. See "Value Added by Manufacture" in Introduction.

³The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

⁴The figures for 1958 to 1972 include expenditures for plants under construction and not yet in operation.

⁵See appendix C of the General Summary for the 1972 changes in the Standard Industrial Classification.

⁶The figures for 1949 to 1972 include data for Government-owned plants operated by private firms for the account of the Federal Government. See text for further explanation.

⁷In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative offices and auxiliary units are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these units are not available for the years 1955 to 1957, 1959 to 1962, 1964 to 1966, 1968 to 1971, and prior to 1949.

⁸These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

⁹The figures prior to 1939 include data for establishments primarily engaged in manufacture of electrometallurgical products, included from 1939 in the "Primary metal" industries. Value added by manufacture for 1939, include data for these establishments and on a basis comparable with earlier years, was \$1,837.5 million.

¹⁰The figures for 1899 to 1935, but not for later years, include data for establishments primarily engaged in mining of rock salt or in smelting and refining of aluminum. Value added by manufacture for 1937, including data for these establishments and on a basis comparable with 1935, was \$1,759.1 million.

Footnotes continued on next page.

TABLE 1. General Statistics: 1972 and Earlier Years—Continued

Footnotes for table 1 --Continued

- ¹The figures for 1899 to 1935, but not for later years, include data for woods employees of the Gum naval stores industry. Woods employees in 1937 for which data are not included in the figures were reported as follows: Production and related workers, 30,880 and wages \$8.6 million.
- ²The figures for 1899 to 1931 do not include data for establishments primarily engaged in manufacture of ethyl alcohol, included for these years in the figures for the "Food and kindred products" industries.
- ³The figures for 1899 to 1927 include data for establishments other than petroleum refineries engaged in the manufacture of lubricating oils, which are included for later years in the series for the petroleum and coal products industries.
- ⁴The figures for 1899 to 1925 include data for establishments primarily engaged in manufacturing of vegetable cooking oils, included for later years in the series for the food and kindred products industries.
- ⁵The figures for 1899 to 1923, but not for later years, include data for certain establishments primarily engaged in manufacture of rubber cement. Value added by manufacture for 1925, including data for these establishments and on a basis comparable with 1923, was \$1,321.2 million.
- ⁶The figures for 1899 only include data for establishments primarily engaged in manufacture of candles. Value added by manufacture for 1904, including data for these establishments and on a basis comparable with 1899, was \$287.2 million.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (2) Less than half of the unit of measurement shown.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

²The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

EXPLANATORY TEXT

INDUSTRIAL INORGANIC CHEMICALS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2812—Alkalies and Chlorine

2813—Industrial Gases

2816—Inorganic Pigments

2819—Industrial Inorganic Chemicals, N.E.C.

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2812.—ALKALIES AND CHLORINE

This industry comprises establishments primarily engaged in manufacturing alkalies and chlorine. For a detailed list of products of industry 2812, refer to table 6A, product codes 28121 11 to 28124 90.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Alkalies and Chlorine Industry in 1972 totaled \$823.2 million. This included shipments of alkalies and chlorine (primary products) valued at \$525.7 million, shipments of other products (secondary products) valued at \$280.9 million, and miscellaneous receipts (mainly resales) of \$16.6 million.

Shipments of alkalies and chlorine (primary products) in 1972 represented 65 percent (specialization ratio) of the

industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 67 percent. Secondary products shipped by this industry in 1972 consisted mainly of industrial organic chemicals, n.e.c., (\$91 million) and industrial inorganic chemicals, n.e.c., (\$62.6 million).

Shipments of alkalies and chlorine (primary products) from establishments classified in industry 2812 in 1972 represented 65 percent (coverage ratio) of these products valued at \$805.7 million shipped by all industries. In 1967, the coverage ratio was 75 percent. Other industries shipping alkalies and chlorine consisted mainly of industry 2869, Industrial Organic Chemicals, N.E.C., (\$225.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2812, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2813.—INDUSTRIAL GASES

This industry comprises establishments primarily engaged in manufacturing gases for sale in compressed, liquid, and solid forms. Establishments primarily engaged in manufacturing fluorine and sulfur dioxide are classified in industry 2819, household ammonia in industry 2842, other ammonia in industry 2873, and chlorine in industry 2812. Distributors of industrial gases and establishments primarily engaged in shipping liquid oxygen are classified in trade industries. For a detailed list of products of industry 2813, refer to table 6A, product codes 28132 00 to 28134 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Industrial Gases Industry in 1972 totaled \$679.3 million. This included shipments of industrial gases (primary products) valued at \$605.2 million, shipments of other products (secondary products) valued at \$27.8 million, and miscellaneous receipts (mainly resales) of \$46.3 million.

Shipments of industrial gases (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 96 percent. Secondary

products shipped by this industry in 1972 consisted mainly of natural gas liquids (\$10 to \$20 million) and nitrogenous fertilizers (\$5 to \$10 million).

Shipments of industrial gases (primary products) from establishments classified in industry 2813 in 1972 represented 92 percent (coverage ratio) of these products valued at \$659.1 million shipped by all industries. In 1967, the coverage ratio was 89 percent. Other industries shipping industrial gases consisted mainly of industry 2869, Industrial Organic Chemicals, N.E.C., (\$32.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2813, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2816.—INORGANIC PIGMENTS

This industry comprises establishments primarily engaged in manufacturing inorganic pigments. Important products of this industry include black pigments (except carbon black, industry 2895), white pigments, and color pigments. Organic color pigments, except animal black and bone black, are classified in industry 2865, Cyclic Crudes and Intermediates. For a detailed list of products of industry 2816, refer to table 6A, product codes 28161 11 to 28163 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Inorganic Pigments Industry in 1972 totaled \$796.9 million. This included shipments of inorganic pigments (primary products) valued at \$651.9 million, shipments of other products (secondary products) valued at \$109.0 million, and miscellaneous receipts (mainly resales) of \$36.0 million.

Shipments of inorganic pigments (primary products) in 1972 represented 86 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 90 percent. Secondary products shipped by this industry in 1972 consisted mainly of industrial inorganic chemicals, n.e.c., (\$50 to \$100 million) and cyclic crudes and intermediates (\$10 to \$20 million).

Shipments of inorganic pigments (primary products) from establishments classified in industry 2816 in 1972 represented

86 percent (coverage ratio) of these products valued at \$756.2 million shipped by all industries. In 1967, the coverage ratio was 84 percent. Other industries shipping inorganic pigments consisted mainly of industry 2869, Industrial Organic Chemicals, N.E.C., (\$20 to \$50 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2816, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2819.—INDUSTRIAL INORGANIC CHEMICALS, N.E.C.

This industry comprises establishments primarily engaged in manufacturing industrial inorganic chemicals, not elsewhere classified. Important products of this industry include inorganic salts of sodium (excluding refined sodium chloride), potassium, aluminum, calcium, chromium, magnesium, mercury, nickel, silver, tin; inorganic compounds such as alums, calcium carbide, hydrogen peroxide, sodium silicate, ammonia compounds (except fertilizers), rare earth metal salts and elemental bromine, fluorine, iodine, phosphorus, and alkali metals (sodium, potassium, lithium, etc.).

Establishments primarily engaged in mining, milling, or otherwise preparing natural potassium, sodium, or boron compounds (other than common salt) are classified in industry 1474, Potash, Soda, and Borate Minerals. Establishments primarily engaged in manufacturing household bleaches are classified in industry 2842, Polishes and Sanitation Goods; phosphoric acid in industry 2874, Phosphatic Fertilizers; and nitric acid, anhydrous ammonia, and other nitrogenous fertilizer materials in industry 2873, Nitrogenous Fertilizers.

Beginning with 1954, statistics include information for government-owned plants operated by private firms for the account of the Federal Government but exclude the activities of government-owned and/or operated plants. General statistics are shown first for all plants (private and government) and second for private plants only in table 1A. Capital expenditures made by government-owned privately operated plants are not included because they are paid for by current billings to the United States. For a detailed list of products of industry 2819, refer to table 6A, product codes 28193 11 to 28199 98.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. However, the SIC number and title are unchanged. The 1972 revisions transferred the

manufacture of household bleaches to industry 2842; the manufacture of synthetic ammonia, nitric acid, and ammonium compounds to industry 2873; and the manufacture of phosphoric acid to industry 2874. In addition, calcium hypochlorite (high test) and other industrial bleaches were transferred from product class 28192, inorganic industrial and household bleaching compounds, to product class 28199, other inorganic chemicals, n.e.c.

The effect of the revisions on the data is summarized in table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, 782 establishments with 76.7 thousand total employment and \$2,608.3 million value added would have been classified in industry 2819 under the old SIC. As a result of the revisions, 329 establishments with 3.9 thousand total employment and \$181.1 million value added shifted to industry 2842; 60 establishments with 8.1 thousand total employment and \$363.2 million value added shifted to industry 2873; and 10 establishments with 1.0 thousand total employment and \$25.4 million value added shifted to industry 2874.

Value of shipments and other receipts of the Industrial Inorganic Chemicals, N.E.C., Industry in 1972 totaled \$3,827.4 million. This included shipments of industrial inorganic chemicals, n.e.c., (primary products) valued at

\$2,382.9 million, shipments of other products (secondary products) valued at \$291.0 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$1,153.5 million.

Shipments of industrial inorganic chemicals, n.e.c., (primary products) in 1972 represented 89 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of industrial organic chemicals, n.e.c., (\$82.2 million) and phosphatic fertilizers (\$36.5 million).

Shipments of industrial inorganic chemicals, n.e.c., (primary products) from establishments classified in industry 2819 in 1972 represented 79 percent (coverage ratio) of these products valued at \$3,002.9 million shipped by all industries. Other industries shipping industrial inorganic chemicals, n.e.c., consisted mainly of industry 2869, Industrial Organic Chemicals, N.E.C., (\$213.4 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2819, these establishments accounted for less than 1 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Year ¹	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials, fuels, etc.	Value of industry shipments	Capital expenditures, new	Gross value of fixed assets	End-of-year inventories	Specialization ratio	Coverage ratio
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours	Wages

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 2812	Industry 2813	Industry 2816	Industry 2819
1972.....	28	106	77	166
1967.....	19	113	65	(NA)
1963.....	19	104	69	(NA)

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

Footnotes continued on next page.

TABLE 1A. General Statistics: 1958 to 1972—Continued

Footnotes for table 1A--Continued

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²Industrial Inorganic Chemicals, N.E.C., total includes, in addition to privately owned establishments, government-owned, contractor-operated plants. See privately owned plants, below.

³Data include value added for government-owned, contractor-operated plants which was estimated based upon averages reported for commercial establishments in prior years.

⁴Data exclude government-owned materials furnished to government-owned, contractor-operated plants and includes fuel and electricity purchased by or for these establishments.

⁵Data include a calculated value of shipments for government-owned, contractor-operated plants comprised of adjusted value added (estimated as described in footnote 3) plus the cost of fuels and electricity energy.

⁶Includes expenditures for plants under construction but not in operation. Capital expenditures of government-owned, contractor-operated plants are excluded from the totals for the industry.

⁷Government-owned, privately operated establishments did not enter into the calculation of "primary product specialization ratio" or "coverage ratio" as all dollar receipts for these establishments were included in "miscellaneous receipts."

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Assets per dollar of shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of shipments	Establishments		All employees	Value added by manufacture	Value of shipments
	Total	With 20 employees or more				Total	With 20 employees or more			
	(number)	(number)	(1,000)	(million dollars)	(million dollars)	(number)	(number)	(1,000)	(million dollars)	(million dollars)
New industry 2819.--Industrial Inorganic Chemicals, N.E.C..	383	264	63.7	2,037.3	3,827.4	(X)	(X)	(X)	(X)	(X)
Old industry 2819.--Industrial Inorganic Chemicals, N.E.C..	383	264	63.7	2,037.3	3,827.4	782	379	76.7	2,608.3	4,951.4

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscellaneous receipts	Primary product specialization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

¹Government-owned, privately operated establishments did not enter into the calculation of "primary product specialization ratio" or "coverage ratio" as all dollar receipts for these establishments were included in "miscellaneous receipts."

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Alkalies and chlorine (SIC 2812)	Industrial gases (SIC 2813)	Inorganic pigments (SIC 2816)	Industrial inorganic chemicals, n.e.c. (SIC 2819)	Other industries

28199 84	Chloride (100% ZnCl ₂).....	1,000 s. tons.	(D)	(D)	(⁵²)	(D)	(D)
28199 87	Sulfate (100% ZnSO ₄ ·7H ₂ O).....	...do....	57.3	46.8	5.7	(D)	(D)
28199 88	Other zinc compounds excluding pigment grades.....	(X)	(X)	⁵² 12.2	(X)	(X)
28199 91	Radioactive isotopes shipped from non-AEC plants producing isotopes ⁴⁶	(X)	(X)	8.3	(X)	(X)
28199 92	Radiation sources and other radioactive materials produced from purchased isotopes ⁴⁶	(X)	(X)	14.2	(X)	(X)
28199 94	Industrial bleaches including liquid lime bleaches.....	(X)	(X)	3.2	(X)	(X)
28199 95		(X)	(X)		(X)	(X)
28199 98		All other inorganic chemicals, n.e.c. ^{38,42,49,50,51}	(X)	(X)	162.8	(X)
28190 00	Industrial inorganic chemicals, n.s.k., reported in census of manufactures, for companies with 10 employees or more. (See note.).....	(X)	(X)	30.6	(X)	(X)
28190 02	Industrial inorganic chemicals, n.s.k., reported in census of manufactures, for companies with less than 10 employees. (See note.).....	(X)	(X)	8.3	(X)	(X)

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

(S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review. (Z) Less than half of the unit of measurement shown (less than 0.1 when rounded).

¹The data for 1972 and 1967 present totals as collected in the census of manufactures as well as comparable totals from Current Industrial Reports series. The product detail as shown are those collected on the CIR form specified.

²Includes quantities liquefied for use, storage, or shipment.

³Ammonia soda and caustic carbonation processes.

⁴Includes quantities used to manufacture caustic soda, finished sodium bicarbonate, finished light and dense soda ash, calcium carbonate, etc.

⁵Quantity figures reported in terms of soda ash processed to refined bicarbonate.

⁶Excludes quantities converted to finished dense soda ash.

⁷Includes quantities later evaporated to solid caustic and reported as such.

⁸Includes some liquid shipped as interplant transfers to other establishments for further processing to dry forms.

⁹Includes unspecified amounts produced from liquid caustic received from other establishments.

¹⁰Includes potassium carbonate, modified sodas, electrolytic soda ash, sodium carbonate (monohydrate), and sal soda, and excludes products classified as alkaline detergents.

¹¹Excludes value for helium produced in government owned plants.

¹²Excludes information from railroad shops, shipyards, welding shops, and small establishments using portable generators.

¹³Excludes production of liquid and gas carbon dioxide converted to and reported as dry ice and also amounts converted from pure carbon dioxide (liquid or solid) purchased or received from other plants. Also excludes quantities produced and consumed in plants manufacturing soda ash or urea, and quantities produced and transferred to other plants where it is further processed.

¹⁴Source: U.S. Department of Interior, Bureau of Mines.

¹⁵Excludes amounts vented, used as fuel, etc., and amounts produced and consumed in the manufacture of synthetic ammonia and methanol, but includes an unspecified amount produced for sale or interplant transfer to plants consuming this gas in the production of ammonia. Also excludes amounts produced by the ammonia dissociation process (cracking of ammonia). Also excludes amounts produced in petroleum refineries for captive use. However, of the total shown for 1967, 70 to 75 percent was accounted for by petroleum refiners with captive lower purity hydrogen production. Not all such petroleum refineries were canvassed in this survey.

¹⁶Excludes amounts produced and consumed in the manufacture of synthetic ammonia or ammonia derivatives.

¹⁷Data for 1967 includes only high purity gas. Value of shipments data for lower purity gas is combined with code 28134 98 for 1967.

¹⁸Excludes hydrocarbon gases such as propane, butane, and propylene, or halogenated hydrocarbons and cyclopropane, which are reported to the U.S. Tariff Commission. Also excludes sulfur dioxide and chlorine, figures for which are shown in Current Industrial Reports series M28A(72)-14, Inorganic Chemicals.

¹⁹Includes values for lower purity nitrogen and lower purity oxygen for 1967.

²⁰Code 28162 25 included in code 28162 98 for 1972.

²¹Source of data: Current Industrial Reports series M28A, "Inorganic Chemicals."

²²Code 28163 61 included in code 28163 98 for 1972.

²³Code 28163 88 included in code 28163 98 for 1967.

Footnotes continued on next page.

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

Footnotes for table 6A--Continued

²⁴Includes value of inorganic chemicals shipped by establishments classified in "manufacturing" and "nonmanufacturing" industries. The value of shipments reported by "nonmanufacturing" establishments classified in the mineral industries and the Tennessee Valley Authority for total industrial inorganic chemicals, n.e.c., code 2819-- amounted to \$175.4 million for 1972 and \$150.3 million for 1967.

²⁵Represents complete coverage of all manufacturers by the inclusion of estimates which account for less than 5 percent of the total.

²⁶Includes anhydrous hydrochloric acid shipments of 217,473 short tons, valued at \$7,943 thousand for 1972 and 185,890 short tons, valued at \$9,189 thousand for 1967. The quantities of anhydrous hydrochloric acid produced amounted to 1,052,235 short tons in 1972 and 628,502 short tons for 1967.

²⁷Codes 28194 51 and 28194 67 combined with code 28194 98.

²⁸Codes 28196 11 and 28196 15 combined with code 28196 71 for 1972.

²⁹In addition, 5,023 short tons in 1972 and 4,732 short tons in 1967 were produced by municipalities.

³⁰Represents quantities produced only for sale or interplant transfer.

³¹Code 28197 39 combined with code 28197 87 for 1972.

³²Excludes quantities consumed in the manufacture of meta-, ortho-, and sesquisilicates. Shipments figures include unspecified amounts shipped to other plants for use in manufacturing meta-, ortho-, or sesquisilicates.

³³Code 28197 43 combined with code 28197 45 for 1972.

³⁴Value for 1972 includes \$19.8 million shipped by "nonmanufacturing" establishments classified in mineral industries.

³⁵Excludes pigment grades.

³⁶Excludes quantities of liquid used to produce solid calcium chloride.

³⁷Code 28199 41 combined with code 28199 23 for 1972.

³⁸Value of activated carbon, deodorizing grade, and solvent recovery and gas absorption grade included in code 28199 98.

³⁹Code 28199 36 combined with code 28199 37 for 1972.

⁴⁰Includes unspecified amounts of hydrogen peroxide produced but not withdrawn from the system.

⁴¹Code 28199 43 combined with code 28199 44 for 1972.

⁴²Code 28199 64 combined with code 28199 98.

⁴³Includes unspecified amounts produced and shipped on contract basis.

⁴⁴Production and shipment totals for the years 1967 and 1972 were collected by the Bureau of Mines.

⁴⁵Code 28199 80 combined with code 28199 81 for 1972.

⁴⁶Based on data published in Current Industrial Reports series MA-38Q(72)-1, "Selected Atomic Energy Products."

⁴⁷Data for 1967 are not available due to Standard Industrial Classification product class revisions for 1972 which transferred the manufacture of phosphoric acid, formerly part of product class 28194, to product code 28741 00, phosphoric acid, in industry 2874, Phosphatic Fertilizers.

⁴⁸Excludes amounts converted to concentrated sodium sulfide.

⁴⁹Code 28199 09 combined with code 28199 98 for 1967.

⁵⁰Code 28199 38 combined with code 28199 98 for 1967.

⁵¹Code 28199 77 combined with code 28199 98 for 1967.

⁵²Code 28199 84 combined with code 28199 88 for 1967.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9 CC.....\$5.0 to \$9.9 FF.....\$20.0 to \$49.9
BB.....\$2.0 to \$4.9 EE.....\$10.0 to \$19.9 GG.....\$50.0 and over

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹For 1972, a geographic breakout is not available for the \$19.8 million shipped by "nonmanufacturing" establishments classified in mineral industries. Therefore, the detailed figures shown will not add to the U.S. total.

- Represents zero. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²The individual product codes included in this class of product for 1972 differ significantly from the prior years. Products shifting into or out of this class of product represent more than 15 percent of the total shipments value at the U.S. level.

EXPLANATORY TEXT

PLASTICS MATERIALS, SYNTHETIC RUBBER, AND MANMADE FIBERS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2821—Plastics Materials, Synthetic Resins, and Nonvulcanizable Elastomers***
- 2822—Synthetic Rubber (Vulcanizable Elastomers)***
- 2823—Cellulosic Manmade Fibers**
- 2824—Synthetic Organic Fibers, Except Cellulosic***

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2821.—PLASTICS MATERIALS AND RESINS (Short Title)

This industry comprises establishments primarily engaged in manufacturing synthetic resins, plastics materials, and nonvulcanizable elastomers. Important products of this industry include cellulose plastic materials; phenolic and other tar acid resins; urea and melamine resins; vinyl resins; styrene resins; alkyd resins; acrylic resins; polyethylene resins; polypropylene resins; rosin modified resins; coumarone-indene and petroleum polymer resins; and miscellaneous resins including polyamide resins, silicones, polyisobutylenes, polyesters, polycarbonate resins, acetal resins, and fluorohydrocarbon resins; vulcanized fiber; and casein plastics. For a detailed list of products of

industry 2821, refer to table 6A, product codes 28213 -- to 28216 21.

Establishments primarily engaged in manufacturing fabricated plastics products or plastics film, sheet, rod, nontextile monofilaments and regenerated cellulose products, and vulcanized fiber are classified in industry 3079, whether from purchased resins or from resins produced in the same plant. Establishments primarily engaged in compounding purchased resins are also classified in industry 3079. Establishments primarily manufacturing adhesives are classified in industry 2891.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. However, the SIC number and title are unchanged. The 1972 revisions transferred the manufacture of unsupported plastics film, sheets, rods, and tubes; regenerated cellulosic products, except rayon; and custom compounded purchased resins to industry 3079, Miscellaneous Plastics Products. In addition, the production of synthetic resin adhesives, from resins manufactured in the same establishment, were transferred to industry 2891, Adhesives and Sealants. The effect of the revisions on the data are summarized in table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, 986 establishments with 82.4 thousand total employment and \$2,762.7 million value added would have been classified in industry 2821 under the old SIC. As a result of the revisions, 612 establishments with 25.9 thousand employees and \$570.5 million value added shifted to industry 3079; and 46 establishments with 1.7 thousand employees and \$41.9 million value added shifted to industry 2891.

Value of shipments and other receipts of the Plastics Materials and Resins Industry in 1972 totaled \$4,478.2 million. This included shipments of plastics materials and resins (primary products) valued at \$3,550.1 million, shipments of other products (secondary products) valued at \$850.5 million, and miscellaneous receipts (mainly resales) of \$77.5 million.

Shipments of plastics materials and resins (primary products) in 1972 represented 81 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of industrial organic chemicals, n.e.c., (\$223.0 million) and miscellaneous plastics products, (\$284.7 million).

Shipments of plastics materials and resins (primary products) from establishments classified in industry 2821 in 1972 represented 79 percent (coverage ratio) of these products valued at \$4,486.4 million shipped by all industries. Other

*Note that the "short title" for this industry is used throughout the report.

industries shipping plastics materials and resins consisted of industry 2869, Industrial Organic Chemicals, N.E.C., (\$536.6 million) and industry 2865, Cyclic Crudes and Intermediates, (\$107.6 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2821, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2822.—SYNTHETIC RUBBER (Short Title)

This industry comprises establishments primarily engaged in the manufacture of synthetic rubber by polymerization or copolymerization. An elastomer, for the purpose of this classification, is a rubber-like material capable of vulcanization, such as copolymers of butadiene and styrene or butadiene and acrylonitrile, polybutadienes, chloroprene rubbers, and isobutylene-isoprene copolymers. Butadiene copolymers containing less than 50 percent butadiene are classified in industry 2821. Natural chlorinated rubbers and cyclized rubbers are considered as semifinished products and are classified in industry 3069.

The code number and definition of this industry were unchanged between 1972 and 1967.

Value of shipments and other receipts of the Synthetic Rubber Industry in 1972 totaled \$1,089.4 million. This included shipments of synthetic rubber (primary products) valued at \$950.5 million, shipments of other products (secondary products) valued at \$110.6 million, and miscellaneous receipts (mainly resales) of \$28.3 million.

Shipments of synthetic rubber (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 89 percent. Secondary products shipped by this industry in 1972 consisted mainly of industrial organic chemicals, n.e.c., (\$50 to \$100 million).

Shipments of synthetic rubber (primary products) from establishments classified in industry 2822 in 1972 represented 74 percent (coverage ratio) of these products valued at \$1,288.6 million shipped by all industries. In 1967, the coverage ratio was 81 percent. Other industries shipping synthetic rubber consisted mainly of industry 2821, Plastics Materials and Resins, (\$81.2 million) and industry 2869, Industrial Organic Chemicals, N.E.C., (\$174.6 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at

the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2822, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2823.—CELLULOSIC MANMADE FIBERS

This industry comprises establishments primarily engaged in manufacturing cellulosic fibers (including cellulose acetate and regenerated cellulose such as rayon, by the viscose or cuprammonium process) in the form of monofilament, yarn, staple, or tow suitable for further manufacturing on spindles, looms, knitting machines, or other textile processing equipment. Establishments primarily engaged in manufacturing textile glass fibers are classified in industry 3229. For a detailed list of products of industry 2823, refer to table 6A, product codes 28231 11 to 28232 98.

The code number and definition of this industry were unchanged between 1972 and 1967.

Value of shipments and other receipts of the Cellulosic Manmade Fibers Industry in 1972 totaled \$589.5 million. In addition to shipments of cellulosic manmade fibers (primary products), shipments of other products (secondary products) consisted mainly of organic fibers, noncellulosic.

Other industries shipping cellulosic manmade fibers (primary products) consisted mainly of industry 2824, Organic Fibers, Noncellulosic.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2823, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2824.—ORGANIC FIBERS, NONCELLULOSIC (Short Title)

This industry comprises establishments primarily engaged in manufacturing synthetic organic fibers, except cellulosic (including those of regenerated proteins and of polymers or copolymers of such components as vinyl chloride, vinylidene chloride, linear esters, vinyl alcohols, acrylonitrile, ethylenes, amides, and related polymeric materials) in the form of monofilament, yarn, staple, or tow suitable for further manufacturing on spindles, looms, knitting machines, or other textile processing equipment. Establishments primarily engaged in manufacturing textile glass fibers are classified in industry

EXPLANATORY TEXT—Continued

3229. For a detailed list of products of industry 2824, refer to table 6A, product codes 28241 15 to 28242 76.

The code number and definition of this industry were unchanged between 1972 and 1967.

Value of shipments and other receipts of the Organic Fibers, Noncellulosic, Industry in 1972 totaled \$3,601.4 million. This included shipments of organic fibers, noncellulosic, (primary products) valued at \$2,853.6 million, shipments of other products (secondary products) valued at \$708.2 million, and miscellaneous receipts (mainly resales) of \$39.5 million.

Shipments of organic fibers, noncellulosic, (primary products) in 1972 represented 80 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 92 percent. Secondary products shipped by this industry in 1972 consisted mainly of cellulosic manmade fibers.

Shipments of organic fibers, noncellulosic (primary products) from establishments classified in industry 2824 in 1972 represented 97 percent (coverage ratio) of these products valued at \$2,949.1 million shipped by all industries. In 1967, the coverage ratio was 94 percent. Other industries shipping organic fibers, noncellulosic, consisted mainly of industry 2823, Cellulosic Manmade Fibers.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2824, these establishments accounted for less than 1 percent of value of shipments.

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 2821	Industry 2822	Industry 2823	Industry 2824
1972.....	191	50	13	35
1967.....	(NA)	33	13	22
1963.....	(NA)	16	8	14

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Assets per dollar of shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of shipments	Establishments		All employees	Value added by manufacture	Value of shipments
	Total	With 20 employees or more				Total	With 20 employees or more

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. Z) Less than half of the unit of measurement shown.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

28240 00	Organic fibers, noncellulosic, n.s.k., for companies with 10 employees or more. (See note.).....	(X)	(X)	3.1	(X)	(X)	.4
28240 02	Organic fibers, noncellulosic, n.s.k., for companies with less than 10 employees. (See note.).....	(X)	(X)	-	(X)	(X)	-

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review. (Z) Less than half of the unit of measurement shown (less than 0.1 when rounded).

¹Data on the quantity and value of specific resins may be found in the U.S. Tariff Commission's Annual Report, "Synthetic Organic Chemicals."

²Due to revisions in the Standard Industrial Classification, data for "synthetic resins for protective coatings," code 28216, are included in "thermoplastic resins," code 28213, and "thermosetting resins," code 28214.

³For quantity of production of individual synthetic rubbers, refer to Current Industrial Reports series M30A, Rubber: Supply and Distribution for the United States, Summary for 1967 and 1972.

⁴Data for 1967 include the oil content of oil-extended elastomers. Data also include figures for polyurethane elastomers, which are not covered in Current Industrial Reports series M30A.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

- Represents zero. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.

EXPLANATORY TEXT

DRUGS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2831—Biological Products

2833—Medicinal Chemicals and Botanical Products*

2834—Pharmaceutical Preparations

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2831.—BIOLOGICAL PRODUCTS

This industry comprises establishments primarily engaged in the production of bacterial and virus vaccine, toxoids and analogous products (such as allergenic extracts), serums, plasmas and other blood derivatives for human or veterinary use. For a detailed list of products of industry 2831, refer to table 6A, product codes 28311 11 to 28315 98.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Biological Products Industry in 1972 totaled \$360.0 million. This included shipments of biological products (primary products) valued at \$297.1 million, shipments of other products (secondary products) valued at \$42.9 million, and miscellaneous receipts (mainly resales) of \$20.0 million.

Shipments of biological products (primary products) in 1972 represented 87 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 90 percent. Secondary products shipped by this industry in 1972 consisted mainly of pharmaceutical preparations at \$27.1 million.

Shipments of biological products (primary products) from establishments classified in industry 2831 in 1972 represented 60 percent (coverage ratio) of these products valued at \$495.2 million shipped by all industries. In 1967, the coverage ratio was 61 percent. Other industries shipping biological products consisted mainly of industry 2834, Pharmaceutical Preparations, (\$186.9 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2831, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2833.—MEDICINALS AND BOTANICALS (Short Title)

This industry comprises establishments primarily engaged in (1) manufacturing bulk organic and inorganic chemicals and their derivatives and (2) processing (grading, grinding, and milling) bulk botanical drugs and herbs. Establishments primarily engaged in manufacturing agar-agar and similar products of natural origin, endocrine products, manufacturing or isolating basic vitamins, and isolating active medicinal principles such as alkaloids from botanical drugs and herbs are also included in this industry. For a detailed list of products of industry 2833, refer to table 6A, product codes 28331 10 to 28332 81.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Medicinals and Botanicals Industry in 1972 totaled \$509.0 million. This included shipments of medicinals and botanicals (primary products) valued at \$401.8 million, shipments of other products (secondary products) valued at \$62.3 million, and miscellaneous receipts (mainly resales) of \$44.9 million.

Shipments of medicinals and botanicals (primary products) in 1972 represented 87 percent (specialization ratio) of the

*Note that the "short title" for this industry is used throughout the report.

industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 71 percent. Secondary products shipped by this industry in 1972 consisted mainly of pharmaceutical preparations (\$30.0 million) and industrial organic chemicals, n.e.c., (\$19.1 million).

Shipments of medicinals and botanicals (primary products) from establishments classified in industry 2833 in 1972 represented 51 percent (coverage ratio) of these products valued at \$793.5 million shipped by all industries. In 1967, the coverage ratio was 56 percent. Other industries shipping medicinals and botanicals consisted mainly of industry 2834, Pharmaceutical Preparations, (\$212.3 million) and industry 2869, Industrial Organic Chemicals, N.E.C., (\$85.9 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2833, these establishments accounted for 2 percent of value of shipments.

INDUSTRY 2834.—PHARMACEUTICAL PREPARATIONS

This industry comprises establishments primarily engaged in manufacturing, fabricating, or processing drugs in pharmaceutical preparations for human or veterinary use. The greater part of the products of these establishments is finished in the form intended for final consumption such as ampoules, tablets, capsules, ointments, medicinal powders, solutions, and suspensions. Products of this industry consist of two important lines, namely: (1) Pharmaceutical preparations promoted primarily to the dental, medical, or veterinary professions and

(2) pharmaceutical preparations promoted primarily to the public. For a detailed list of products of industry 2834, refer to table 6A, product codes 28341 11 to 28349 98.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Pharmaceutical Preparations Industry in 1972 totaled \$7,149.5 million. This included shipments of pharmaceutical preparations (primary products) valued at \$6,085.7 million, shipments of other products (secondary products) valued at \$882.4 million, and miscellaneous receipts (mainly resales) of \$181.4 million.

Shipments of pharmaceutical preparations (primary products) in 1972 represented 87 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 87 percent. Secondary products shipped by this industry in 1972 consisted mainly of toilet preparations (\$245.1 million) and medicinals and botanicals (\$212.3 million).

Shipments of pharmaceutical preparations (primary products) from establishments classified in industry 2834 in 1972 represented 97 percent (coverage ratio) of these products valued at \$6,308.3 million shipped by all industries. In 1967, the coverage ratio was also 97 percent. Other industries shipping pharmaceutical preparations consisted mainly of industry 2844, Toilet Preparations, (\$77.7 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2834, these establishments accounted for 1 percent of value of shipments.

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 2831	Industry 2833	Industry 2834
1972.....	158	125	680
1967.....	119	112	791
1963.....	102	122	944

(NA) Not available. (S) Withheld because the data did not meet publication standards. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Assets per dollar of shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (2) Less than half of the unit of measurement shown.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown.

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

D¹ Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above.

²Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscellaneous receipts	Primary product specialization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 5A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Biological products (SIC 2831)	Medicinals and botanicals (SIC 2833)	Pharmaceutical preparations (SIC 2834)	Other industries

TABLE 6A. Products and Product Classes—Value of Shipments by All Producers: 1972 and 1967

(Footnotes for table 6A)

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

Definitions: Ethical--Products primarily advertised or otherwise promoted to or prescribed by the health professions (medical, dental, pharmaceutical, nursing, etc.). Proprietary--Products primarily advertised or otherwise promoted to the general public.

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than 0.1 when rounded. *Totals for these product groupings are not being published in order to permit the maximum publication of detailed product data.

¹Data on quantities produced and values shipped for many of the synthetic organic medicinal chemicals included in this grouping are shown in the U.S. International Trade Commission's Annual Report, "Synthetic Organic Chemicals, United States Production and Sales."

²1972 product detail appears in Current Industrial Reports, series M28G, "Pharmaceutical Preparations, Except Biologicals." The variations between the two sets of figures are due primarily to the following reasons:

- Use of different bases for reporting value. Product class shipments of pharmaceutical preparations reported in the census of manufactures represent net sales value (total sales dollars, less discounts, allowances, and returns) f.o.b. plant. The value includes a profit (or loss) normally assigned to the manufacturing establishment to cover only those costs attributable to the establishment. For example, sales costs by separately maintained sales organizations are excluded. The data shown in Current Industrial Reports, series M28G, however, include value attributed by sales distribution, advertising, direct promotion, and research, whether or not directly attributable to the establishment. In cases where manufacturing, distribution, and sales operations are consolidated for accounting purposes for the establishment, the two values are comparable.
- Duplication. In order to avoid duplication of shipment figures, preparations shipped in bulk quantities which were repackaged at another location have been omitted from the commodity survey, but the shipments of the repackager have been included. The census figures also include the bulk shipments.

³Code 28341 31 combined with 28341 39.

⁴Code 28342 11 combined with 28342 98.

⁵Code 28342 41 combined with 28342 98.

⁶Codes 28344 65 and 28344 71 combined with 28344 79.

⁷Cough drops selling at retail for 10 cents per package or less are coded as primary to industry 2065, Confectionery Products.

⁸Differences between the census of manufactures and the Current Industrial Report are due to preparations shipped in bulk.

⁹Code 28349 41 combined with codes 28349 98 and 28349 00.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²A major revision in the classification of products classified in industry 2834, Pharmaceutical Preparations, was introduced in 1963, and therefore, prior data, for the most part, are not comparable at the product class level.

TABLE 7A. Materials Consumed, by Kind: 1972 and 1967

(See appendix, Explanation of Terms)

EXPLANATORY TEXT

SOAPS, CLEANERS, AND TOILET GOODS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2841—Soap and Other Detergents, Except Specialty Cleaners*
- 2842—Specialty Cleaning, Polishing, and Sanitation Preparations*
- 2843—Surface Active Agents, Finishing Agents, Sulfonated Oils and Assistants*
- 2844—Perfumes, Cosmetics, and Other Toilet Preparations*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2841.—SOAP AND OTHER DETERGENTS (Short Title)

This industry comprises establishments primarily engaged in manufacturing soap, synthetic organic detergents, inorganic alkaline detergents, or any combination thereof, and establishments producing crude and refined glycerin from vegetable and animal fats and oils. Establishments primarily engaged in manufacturing shampoos or shaving products, whether from soap or synthetic detergents, are classified in industry 2844; and synthetic glycerin in industry 2869 (Industrial Organic Chemicals, N.E.C.). For a detailed list of products of industry

*Note that the "short title" for this industry is used throughout the report.

2841, refer to table 6A, product codes 28411 12 to 28414 51.

The statistics for this industry, as classified under the 1972 edition of the SIC manual, were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Soap and Other Detergents Industry in 1972 totaled \$3,394.4 million. This included shipments of soap and other detergents (primary products) valued at \$2,579.5 million, shipments of other products (secondary products) valued at \$537.2 million, and miscellaneous receipts (mainly resales) of \$277.7 million.

Shipments of soap and other detergents (primary products) in 1972 represented 83 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 83 percent. Secondary products shipped by this industry in 1972 consisted mainly of polishes and sanitation goods (\$165.3 million) and toilet preparations (\$172.5 million).

Shipments of soap and other detergents (primary products) from establishments classified in industry 2841 in 1972 represented 90 percent (coverage ratio) of these products valued at \$2,851.8 million shipped by all industries. In 1967, the coverage ratio was also 90 percent. Other industries shipping soap and other detergents consisted mainly of industry 2842, Polishes and Sanitation Goods, (\$112.9 million) and industry 2844, Toilet Preparations, (\$49.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2841, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2842.—POLISHES AND SANITATION GOODS (Short Title)

This industry comprises establishments primarily engaged in manufacturing furniture, metal, and other polishes; waxes and dressings for fabricated leather and other materials; household, institutional, and industrial plant disinfectants and deodorants; household bleaches; dry cleaning preparations; and other sanitation preparations. For a detailed list of products of industry 2842, refer to table 6A, product codes 28422 43 to 28424 98.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual; however, the SIC number and title are unchanged. 1972 revisions transferred the manufacture of household insecticides and repellants to industry 2879, Agricultural Chemicals, N.E.C. In addition, the production of household liquid and dry bleaches was transferred from industry 2819, Industrial Inorganic Chemicals, N.E.C., to this industry. The effect of the revisions on the data are summarized in table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and the new SIC. As can be seen from table 1C, 868 establishments with 22.0 thousand total employment and \$978.6 million value added would have been classified in industry 2842 under the old SIC. As a result of the revisions, 89 establishments with 0.8 thousand employees and \$41.6 million value added shifted to industry 2879; and 329 establishments with 3.9 thousand employees and \$181.1 million value added shifted from industry 2819 to industry 2842.

Value of shipments and other receipts of the Polishes and Sanitation Goods Industry in 1972 totaled \$1,867.6 million. This included shipments of polishes and sanitation goods (primary products) valued at \$1,436.7 million, shipments of other products (secondary products) valued at \$331.0 million, and miscellaneous receipts (mainly resales) of \$99.9 million.

Shipments of polishes and sanitation goods (primary products) in 1972 represented 81 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of soap and other detergents (\$112.9 million) and agricultural chemicals, n.e.c., (\$71.6 million).

Shipments of polishes and sanitation goods (primary products) from establishments classified in industry 2842 in 1972 represented 83 percent (coverage ratio) of these products valued at \$1,735.8 million shipped by all industries. Other industries shipping polishes and sanitation goods consisted mainly of industry 2841, Soap and Other Detergents, (\$165.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2842, these establishments accounted for 10 percent of value of shipments.

INDUSTRY 2843.—SURFACE ACTIVE AGENTS (Short Title)

This industry comprises establishments primarily engaged in producing surface active preparations for use as wetting agents,

emulsifiers, and penetrants. Establishments engaged in producing sulfonated oils and fats and related products are also included in this industry. For a detailed list of products of industry 2843, refer to table 6A, product codes 28430 41 to 28430 85.

The statistics for this industry, as classified under the 1972 edition of the SIC manual, were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Surface Active Agents Industry in 1972 totaled \$462.6 million. This included shipments of surface active agents (primary products) valued at \$349.9 million, shipments of other products (secondary products) valued at \$80.3 million, and miscellaneous receipts (mainly resales) of \$32.4 million.

Shipments of surface active agents (primary products) in 1972 represented 81 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 79 percent. Secondary products shipped by this industry in 1972 consisted mainly of industrial organic chemicals, n.e.c., (\$29.6 million) and soap and other detergents (\$10.1 million).

Shipments of surface active agents (primary products) from establishments classified in industry 2843 in 1972 represented 60 percent (coverage ratio) of these products valued at \$580.7 million shipped by all industries. In 1967, the coverage ratio was 54 percent. Other industries shipping surface active agents consisted mainly of industry 2869, Industrial Organic Chemicals, N.E.C., (\$83.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2843, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2844.—TOILET PREPARATIONS (Short Title)

This industry comprises establishments primarily engaged in manufacturing perfumes (natural and synthetic), cosmetics, and other toilet preparations. This industry also includes establishments primarily engaged in blending and compounding perfume bases; and those manufacturing shampoos and shaving products, whether from soap or synthetic detergents. Establishments primarily engaged in manufacturing synthetic perfume and flavoring materials are classified in industry 2869 (Industrial Organic Chemicals, N.E.C.) and essential oils in industry 2899 (Chemical Preparations, N.E.C.). For a detailed list of products of industry 2844, refer to table 6A, product codes 28441 33 to 28445 98.

The statistics for this industry, as classified under the 1972 edition of the SIC manual, were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Toilet Preparations Industry in 1972 totaled \$4,057.3 million. This included shipments of toilet preparations (primary products) valued at \$3,635.7 million, shipments of other products (secondary products) valued at \$248.6 million, and miscellaneous receipts (mainly resales) of \$173.0 million.

Shipments of toilet preparations (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 94 percent. Secondary products shipped by this industry in 1972 consisted mainly of pharmaceutical preparations (\$89.6 million) and soap and other detergents (\$49.3 million).

Shipments of toilet preparations (primary products) from

establishments classified in industry 2844 in 1972 represented 86 percent (coverage ratio) of these products valued at \$4,247.1 million shipped by all industries. In 1967, the coverage ratio was 80 percent. Other industries shipping toilet preparations consisted mainly of industry 2834, Pharmaceutical Preparations, (\$245.1 million) and industry 2841, Soap and Other Detergents, (\$172.5 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2844, these establishments accounted for less than 1 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Year ¹	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials, fuels, etc.	Value of industry shipments	Capital expenditures, new	Gross value of fixed assets	End-of-year inventories	Specialization ratio	Coverage ratio
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours	Wages

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 2841	Industry 2842	Industry 2843	Industry 2844
1972.....	577	1,022	151	593
1967.....	599	(NA)	154	624
1963.....	641	(NA)	137	673

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Assets per dollar of shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of shipments	Establishments		All employees	Value added by manufacture	Value of shipments
	Total	With 20 employees or more				Total	With 20 employees or more

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

(D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Soap and other detergents (SIC 2841)	Polishes and sanitation goods (SIC 2842)	Surface active agents (SIC 2843)	Toilet preparations (SIC 2844)	Other industries
	Total shipments and miscellaneous receipts.....	(X)	3,394.4	1,867.6	462.6	4,057.3	(X)
2841-	Soap and other detergents.....	2,851.8	2,579.5	112.9	10.1	49.3	100.0
28411	Soap and detergents, nonhousehold.....	652.5	506.4	74.3	(over 2)	(under 2)	61.8
28412	Household detergents.....	1,633.9	1,585.0	36.3	-	(2-5)	(5-10)
28413	Soaps, except specialty cleaners, household.....	412.0	355.6	1.1	-	44.8	10.5
28414	Glycerin, natural.....	50.4	37.3	-	(under 2)	(under 2)	(over 2)

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

1972 product code	Product	Unit of measure	Total product shipments including interplant transfers			
			1972		1967	
			Quantity	Value (million dollars)	Quantity	Value (million dollars)
2844- --	TOILET PREPARATIONS--Continued					
28445 --	Other Cosmetics and Toilet Preparations--Continued					
	Powder:					
28445 41	Talcum and toilet powder.....	1,000 units...	(S)	121.1	(S)	86.2
28445 43	Face powder.....	do.....	(S)	41.3	(S)	43.6
28445 45	Liquid and compact, for wet application.....		(X)	20.6	(X)	22.2
28445 48	Other powder, including foot powder (cream, sachet, and paste).....		(X)	16.0	(X)	6.6
28445 61	Bath salts, tablets, oils and bubble baths.....	1,000 units...	(S)	155.4	(S)	65.5
28445 98	Other cosmetics and toiletries, including depilatories.....		(X)	65.9	(X)	18.7
28445 00	Other cosmetics and toilet preparations, n.s.k.....		(X)	46.8	(X)	54.4
28440 00	Toilet preparations, n.s.k., for companies with 10 employees or more. (See note.).....		(X)	65.7	(X)	64.4
28440 02	Toilet preparations, n.s.k., for companies with less than 10 employees. (See note.).....		(X)	30.3	(X)	15.8

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

(X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review.

Definitions of specified products:

Alkaline detergents--Mixtures designed primarily for cleaning hard surfaces such as dishes, floors, walls, counters, vehicles, appliances, etc.

Soaps--Products, including combinations of synthetic organic surface active agents and alkaline detergents, containing more than 25 percent anhydrous soap.

Synthetic organic detergents--Mixtures containing one or more of the following compounds: Soap, alkaline detergents, synthetic organic surface active agents, sequestrants, etc., designed primarily for laundry use or for hand dishwashing.

Heavy-duty phosphate-based detergents--Detergent products for laundry applications with a substantial phosphate builder.

Heavy-duty phosphate-free detergents--Detergent products for laundry applications containing alkaline compounds, but excluding phosphate builders.

Light-duty detergents--Detergent products for hand dishwashing and for fine fabrics with little or no phosphate builder.

Presoaks--Products containing essentially one or more of the following ingredients: Alkaline compounds, synthetic organic surface active agents, soap, and soil releasing agents such as (but not confined to) protease, amylase, and lipases (enzymes).

²Product code 28412 11 combined with code 28411 21 for 1967.

³Product code 28413 51 combined with code 28413 98.

⁴Data on quantities of glycerin (synthetic and natural) produced are shown in Current Industrial Report series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

⁵Includes natural glycerin only. Additional data on quantities produced and quantities and value shipped for synthetic glycerin are shown in the U.S. International Trade Commission's annual report, "Synthetic Organic Chemicals, United States Production and Sales."

⁶Source: Current Industrial Reports series, M28A, Inorganic Chemicals.

⁷Code 28423 41 combined with 28423 98 for 1967.

⁸Code 28444 51 included in code 28444 98.

⁹Million lb.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

TABLE 7A. Materials Consumed, by Kind: 1972 and 1967—Continued

(Footnotes for table 7A)

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

¹This item represents the total cost of materials for establishments that did not report detailed materials data. It also includes estimates for companies that were not mailed report forms.

EXPLANATORY TEXT

PAINTS AND ALLIED PRODUCTS

This report shows 1972 Census of Manufactures statistics for establishments classified in the following industry:

SIC Code and Title

2851—Paints, Varnishes, Lacquers, Enamels, and Allied Products*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2851.—PAINTS AND ALLIED PRODUCTS (Short Title)

This industry comprises establishments primarily engaged in manufacturing paints; varnishes; lacquers; enamels and shellac; putties and wood fillers and sealers; paint and varnish removers; paint brush cleaners and allied paint products.

Establishments primarily engaged in manufacturing carbon black are classified in industry 2895; bone black, lampblack, and inorganic color pigments in industry 2816; organic color pigments in industry 2865; plastics materials in industry 2821, printing ink in industry 2893; calking compounds and sealants in industry 2891; and artists' paints in industry 3952. For a

detailed list of products of industry 2851, refer to table 6A, product codes 28511 11 to 28519 77.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. However, the SIC number and title are unchanged. Calking and sealant compounds, formerly classified under product class 28518 in this industry, have been reclassified into industry 2891, Adhesives and Sealants. The effect of this revision on the data are summarized in Table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, 1,630 establishments with 68-thousand total employment and \$1,859 million value added would have been classified in industry 2851 under the old SIC.

Value of shipments and other receipts of the Paints and Allied Products Industry in 1972 totaled \$3,824.3 million. This included shipments of paints and allied products (primary products) valued at \$3,392.6 million, shipments of other products (secondary products) valued at \$174.9 million, and miscellaneous receipts (mainly resales) of \$256.8 million.

Shipments of paint and allied products (primary products) in 1972 represented 95 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 95 percent. Secondary products shipped by this industry in 1972 consisted mainly of plastics materials and resins (\$47.9 million) and adhesives and gelatin (\$42.9 million).

Shipments of paints and allied products (primary products) from establishments classified in industry 2851 in 1972 represented 96 percent (coverage ratio) of these products valued at \$3,520.2 million shipped by all industries. In 1967, the coverage ratio was also 96 percent. Other industries shipping paint and allied products consisted mainly of industry 2891, Adhesives and Sealants (\$26.9 million) and industry 2893, Printing Ink (\$15.0 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2851, these establishments accounted for 7 percent of value of shipments.

*Note that the "short title" for this industry is used throughout the report.

TABLE 1A. General Statistics: 1958 to 1972

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for this industry for the last 3 years in which censuses were conducted is as follows: 1972, 1,317; 1967, 1,459; and 1963, 1,579.

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown.

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

NA Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

ESTABS. COVERED BY ADMIN. RECORD ¹ .	398	1.3	10.8	.8	1.4	4.9	28.5	33.4	61.9	1.6	9.6

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

¹ Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underlined figures above.

² Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
			Number	Payroll	Number	Man-hours	Wages

(D) Withheld to avoid disclosing figures for individual companies.

(2) Less than half of the unit of measurement shown.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio
		(million dollars)	(million dollars)	(million dollars)	(million dollars)	Col. B Col. B & C	(million dollars)	(million dollars)	(million dollars)	Col. B Col. F
		A	B	C	D	E	F	G	H	I
2851	Paints and allied products.....1972.. 1967..	3,824.3 2,911.4	3,392.6 2,598.5	174.9 133.0	256.8 179.8	95 95	3,520.2 2,703.8	3,392.6 2,598.5	127.6 105.4	96 96

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Paints and allied products (SIC 2851)	Other industries	Product code	Industry, class of products, and miscellaneous receipts	All industries	Paints and allied products (SIC 2851)	Other industries

28519 11	Thinners for dopes, lacquers, and oleoresinous thinners, including mixtures and proprietary thinners.....	Million gal...	59.3	71.3	59.6	57.3
28519 41	Aerosol paints made from purchased paint.....	...do.....	(S)	64.5	3.2	21.2
28519 51	Organosols and plastisols, other than coatings.....	(X)	23.3	(X)	13.4
28519 77	Miscellaneous related paint products, e.g., pigment dispersions, ink vehicles, etc.....	(X)	169.0	(X)	133.7
28519 00	Miscellaneous paint products, n.s.k.....	(X)	22.5	(X)	10.0
28510 00	Paints and allied products, n.s.k., for companies with 10 employees or more. (See note.).....	(X)	268.0	(X)	304.2
28510 02	Paints and allied products, n.s.k., for companies with less than 10 employees. (See note.).....	(X)	64.1	(X)	34.7

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

(X) Not applicable. (NA) Not available. (S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review. ^e From 10 to 30 percent of this figure was estimated.

¹Due to revisions in the Standard Industrial Classification, this figure does not agree with those previously published. Calking and sealant compounds, valued at \$68.3 million in 1967, were reclassified from product class 28518 in industry 2891.

²Includes products listed below for which quantity data were estimated.

³This figure may be overstated due to the restructuring of product class 28518.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²The individual product codes included in this class of products for 1972 differ significantly from prior years. Products shifting into or out of this class of products represent more than 15 percent of the total value at the United States level.

EXPLANATORY TEXT

INDUSTRIAL ORGANIC CHEMICALS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2861—Gum and Wood Chemicals

2865—Cyclic (Coal Tar) Crudes and Cyclic Intermediates, Dyes, and Organic Pigments (Lakes and Toners)*

2869—Industrial Organic Chemicals, N.E.C.

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Industries 2865, Cyclic Crudes and Intermediates, and 2869, Industrial Organic Chemicals, N.E.C., include establishments primarily engaged in manufacturing basic industrial organic chemicals. Establishments primarily engaged in manufacturing formulated agricultural pesticides are classified in industry 2879; organic and inorganic medicinal chemicals, drugs, and medicines in industry 2833; and soap, glycerin (except synthetic), and cosmetics in SIC group 284.

In order to avoid duplicating the reports furnished to the U.S. Tariff Commission for synthetic organic chemicals, establishments reporting these products to the U.S. Tariff Commission were requested to report dollar values by product classes to the Bureau of the Census, including the value of those synthetic organic chemicals shipped as interplant transfers. As indicated in the table on the following page, the dollar values reported to the Census Bureau differ from those reported to the U.S. Tariff Commission.

*Note that the "short title" for this industry is used throughout the report.

In general, data reported to the Census Bureau are for the value of the product as shipped, whether it is a chemical compound or a finished product (preparation or mixture). Sales figures reported to the Tariff Commission represent the value of the organic chemical compound whether it is shipped as such or incorporated in another product. Also, reports to the Census Bureau are based on plant reports and the dollar shipment figures represent the valuation (f.o.b. plant) of all goods physically shipped from the producing site. Thus the Census data include products shipped on consignment and interplant transfers (separate measures are shown in table 6A) while the U.S. Tariff Commission data represent sales on a company basis by primary producers, only when accompanied by passage of title. Thus, the commercial shipment figures reported by Census most nearly correspond to the information in the Tariff report.

INDUSTRY 2861.—GUM AND WOOD CHEMICALS

This industry comprises establishments primarily engaged in manufacturing hardwood and softwood distillation products, wood and gum naval stores, charcoal, natural dyestuff, and natural tanning materials.

Establishments primarily engaged in manufacturing synthetic tanning materials are classified in industry 2869, synthetic dye in industry 2865, and synthetic organic chemicals in industry 2869. For a detailed list of products of industry 2861, refer to table 6A, product codes 28611 13 to 28612 96.

The 1972 SIC number, title, and definition of this industry are the same as those used in the 1967 SIC classification system.

Value of shipments and other receipts of the Gum and Wood Chemicals Industry in 1972 totaled \$332.3 million. This included shipments of gum and wood chemicals (primary products), valued at \$226.9 million, shipments of other products (secondary products) valued at \$97.6 million, and miscellaneous receipts (mainly resales) of \$7.8 million.

Shipments of gum and wood chemicals (primary products) in 1972 represented 70 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 73 percent. Secondary products shipped by this industry in 1972 consisted mainly of miscellaneous chemical preparations (\$45.5 million), plastics materials and resins, and agricultural chemicals.

Shipments of gum and wood chemicals (primary products) from establishments classified in industry 2861 in 1972 represented 75 percent (coverage ratio) of these products valued at

EXPLANATORY TEXT—Continued

Shipments and Interplant Transfers of Synthetic Organic Chemicals: 1972

Product code	Product of product class	Reported by Bureau of the Census		As reported by U.S. Tariff Commission Sales ¹ (million dollars)
		Shipments including interplant transfers (million dollars)	Commercial shipments only (million dollars)	
28651 --	Intermediates	1,538.0	1,151.7	1,425.6
28652 --	Synthetic organic dyes	473.6	464.5	479.7

28655 --	Tar crudes	80.9	74.8	(²)
28691 --	Miscellaneous cyclic chemical products	465.0	417.0	423.0
28692 --	Miscellaneous acyclic chemicals and chemical products	5,435.2	4,107.4	4,250.3
28693 --	Synthetic organic chemicals, n.e.c.:			
28693 11	Flavor and perfume materials	123.4	116.3	88.4
28693 31	Rubber processing chemicals	228.2	190.8	177.6
28693 51	Plasticizers	362.6	306.3	290.6
28694 --	Pesticides and other synthetic organic agricultural chemicals	489.3	434.1	1,091.7

¹ The sales data are preliminary figures published by the U.S. Tariff Commission in its preliminary annual report, "Synthetic Organic Chemicals, United States Production and Sales," for 1972.

² Although data for tar crudes are reported by Tariff, no total figure is published for 1972.

\$300.8 million shipped by all industries. In 1967, the coverage ratio was 76 percent. Other industries shipping gum and wood chemicals consisted mainly of industry 2631, Paperboard Mills, \$40.1 million; and industry 2621, Papermills, Except Building Paper, \$13.4 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2861, these establishments accounted for 2 percent of value of shipments.

INDUSTRY 2865—CYCLIC CRUDES AND INTERMEDIATES (Short Title)

This industry comprises establishments primarily engaged in manufacturing cyclic organic intermediates, dyes, color lakes

and toners, and coal tar crudes. Important products of this industry include (1) derivatives of benzene, toluene, naphthalene, anthracene, pyridine, carbazole, and other cyclic chemical products; (2) synthetic organic dyes; (3) synthetic organic pigments; and (4) cyclic (coal tar) crudes, such as light oils and light oil products, coal tar acids, and products of medium and heavy oil such as creosote oil, naphthalene, anthracene, and their higher homologues, and tar. Establishments primarily engaged in manufacturing coal tar crudes in chemical recovery ovens are classified in industry 3312; and petroleum refineries which produce such products, in industry 2911.

No attempt was made by the Census Bureau to secure commodity detail for intermediates, dyes, or lakes and toners since this information is compiled and published by the U.S. Tariff Commission in "Synthetic Organic Chemicals, United States Production and Sales." Likewise, no attempt was made by the Census Bureau to secure commodity detail for the tar crudes manufactured by tar distillers since this information is also compiled and published by the U.S. Tariff Commission in "Synthetic Organic Chemicals, United States Production and Sales." Direct comparisons between the product-class data

reported to the Census Bureau and the product information reported to the U.S. Tariff Commission cannot be made since the statistics published by the U.S. Tariff Commission do not show all products produced by tar distillers as distinguished from products produced by petroleum refineries or others. For the total value of the product groupings comprising industry 2865, refer to table 6A, product codes 28651 11 to 28655 11.

The 1972 definition of this industry is the same as that used in the 1967 SIC classification system. However, the SIC number has been changed from 2815 to 2865.

Value of shipments and other receipts of the Cyclic Crudes and Intermediates Industry in 1972 totaled \$2,044.5 million. This included shipments of cyclic crudes and intermediates (primary products), valued at \$1,505.7 million, shipments of other products (secondary products) valued at \$469.5 million, and miscellaneous receipts (mainly resales) of \$69.3 million.

Shipments of cyclic crudes and intermediates (primary products) in 1972 represented 76 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 73 percent. Secondary products shipped by this industry in 1972 consisted mainly of industrial organic chemicals, n.e.c. (\$121.9 million), and plastics materials and resins (\$107.6 million).

Shipments of cyclic crudes and intermediates (primary products) from establishments classified in industry 2865 in 1972 represented 65 percent (coverage ratio) of these products valued at \$2,332.4 million shipped by all industries. In 1967, the coverage ratio was 66 percent. Other industries shipping cyclic crudes and intermediates consisted mainly of industry 2869, Industrial Organic Chemicals, N.E.C. (\$625.3 million), and industry 2911, Petroleum Refining, (\$75.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2865, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2869.—INDUSTRIAL ORGANIC CHEMICALS, N.E.C.

This industry comprises establishments primarily engaged in manufacturing industrial organic chemicals, not elsewhere classified. Important products of this industry include (1) non-cyclic organic chemicals such as acetic, chloroacetic, adipic, formic, oxalic and tartaric acids and their metallic salts;

chloral, formaldehyde, and methylamine; (2) solvents such as amyl, butyl, and ethyl alcohols; methanol; amyl, butyl and ethyl acetates; ethyl ether, ethylene glycol ether and diethylene glycol ether; acetone, carbon disulfide and chlorinated solvents such as carbon tetrachloride, perchloroethylene and trichloroethylene; (3) polyhydric alcohols such as ethylene glycol, sorbitol, pentaerythritol, and synthetic glycerin; (4) synthetic perfume and flavoring materials such as coumarin, methyl salicylate, saccharin, citral, citronellal, synthetic geraniol, ionone, terpineol, and synthetic vanillin; (5) rubber processing chemicals such as accelerators and antioxidants, both cyclic and acyclic; (6) plasticizers, both cyclic and acyclic, such as esters of phosphoric acid, phthalic anhydride, adipic acid, lauric acid, oleic acid, sebacic acid, and stearic acid; (7) synthetic tanning agents such as naphthalene sulfonic acid condensate; (8) chemical warfare gases; and (9) esters, amines, etc., of polyhydric alcohols and fatty and other acids.

Establishments primarily engaged in manufacturing plastics materials and nonvulcanizable elastomers are classified in industry 2821; synthetic rubber in industry 2822; essential oils in industry 2899; wood distillation products, naval stores, and natural dyeing and tanning materials in industry 2861; rayon and other synthetic fibers in industries 2823 and 2824; specialty cleaning, polishing, and sanitation preparations in industry 2842; paints in industry 2851; urea in industry 2873; organic pigments in industry 2865; and inorganic pigments in industry 2816. Distilleries engaged in the manufacture of grain alcohol for beverage purposes are classified in industry 2085.

Detailed product information for industrial organic chemicals are compiled and published by the U.S. Tariff Commission in "Synthetic Organic Chemicals, United States Production and Sales." For a detailed list of products of industry 2869, refer to table 6A, product codes 28691 11 to 28695 98.

The SIC number of this industry has been changed from code number 2818 in 1967 to code number 2869 in 1972. Also, the content of the industry has been slightly changed by the 1972 Standard Industrial Classification revisions, in that urea is now a part of industry 2873. However, the reclassification of urea had little effect on the establishments comprising the Industrial Organic Chemicals, N.E.C., Industry.

Value of shipments and other receipts of the Industrial Organic Chemicals, N.E.C., Industry in 1972 totaled \$9,179.1 million. This included shipments of industrial organic chemicals, n.e.c., (primary products), valued at \$6,314.8 million, shipments of other products (secondary products) valued at \$2,527.6 million, and miscellaneous receipts (mainly resales) of \$336.7 million.

Shipments of industrial organic chemicals, n.e.c., (primary products) in 1972 represented 71 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 72 percent.

Secondary products shipped by this industry in 1972 consisted mainly of cyclic crudes and intermediates (\$625.3 million), plastics materials and resins (\$520.4 million), alkalies and chlorine (\$231.1 million), and industrial inorganic chemicals, n.e.c. (\$203.1 million).

Shipments of industrial organic chemicals, n.e.c., (primary products) from establishments classified in industry 2869 in 1972 represented 85 percent (coverage ratio) of these products valued at \$7,465.7 million shipped by all industries. In 1967, the coverage ratio was 81 percent. Other industries shipping industrial organic chemicals, n.e.c., consisted mainly of industry 2821, Plastics Materials and Resins (\$249.2 million); indus-

try 2865, Cyclic Crudes and Intermediates (\$121.9 million); and industry 2911, Petroleum Refining (\$105.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2869, these establishments accounted for less than 1 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 2861	Industry 2865	Industry 2869
1972.....	118	124	351
1967.....	172	115	339
1963.....	229	(NA)	343

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

(See appendix. Explanation of Terms)

[illegible]

(Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

²The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

TABLE 4. General Statistics, by Employment Size of Establishment: 1972

(See appendix, Explanation of Terms)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)

(D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Gum and wood chemicals (SIC 2861)	Cyclic crudes and intermediates (SIC 2865)	Industrial organic chemicals, n.e.c. (SIC 2869)	Other industries

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Includes value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

1972 product code	Product	1972			1967		
		Total product shipments including interplant transfers	Commercial shipments only	Interplant transfers only	Total product shipments including interplant transfers	Commercial shipments only	Interplant transfers only
		(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)
2869- --	INDUSTRIAL ORGANIC CHEMICALS, N.E.C.--Continued						
28695 --	Ethyl Alcohol and Other Industrial Organic Chemicals, N.E.C.....	280.3	(X)	(X)	239.4	(X)	(X)
	Ethyl alcohol ¹ :						
28695 11	Pure (natural).....	35.0	(D)	(D)	33.6	(D)	(D)
28695 21	Denatured (special or complete), including natural and syn- thetic for uses other than rubbing.....	42.6	(D)	(D)	44.2	(D)	(D)
28695 31	Flavor oil mixtures and blends.....	34.7	34.7	-	27.9	27.9	-
28695 37	Reagent and high purity grades of organic chemicals refined from purchased technical grades.....	23.0	22.0	1.0	19.7	19.7	-
28695 51	Natural organic chemicals, n.e.c.....	60.4	(D)	(D)	44.0	(D)	(D)
28695 98	Other industrial organic chemicals.....	78.8	(D)	(D)	67.8	64.4	3.4
28695 00	Other industrial organic chemicals, n.s.k.....	5.6	(X)	(X)	2.2	(X)	(X)
28690 00	Industrial organic chemicals, n.e.c., n.s.k., for companies with 10 employees or more. (See note.).....	58.2	(X)	(X)	33.5	(X)	(X)
28690 02	Industrial organic chemicals, n.e.c., n.s.k., for companies with less than 10 employees. (See note.).....	14.7	(X)	(X)	5.2	(X)	(X)

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review. (Z) Less than half of the unit of measurement shown (less than 0.1 when rounded).

¹Excludes data for sulfate wood turpentine.

²Excludes pinene reported as such.

³Excludes data for synthetic acetic acid and synthetic methanol for which data are compiled by the U.S. Tariff Commission.

⁴Data for refined tall oil fatty acids containing 90 percent free fatty acids, or more excluding resin acids, are reported in industry 2899, Chemical Preparations, N.E.C.

⁵Data for quantities produced and values shipped for many of the synthetic organic chemicals included in this grouping are shown in the U.S. Tariff Commission's Annual Report, "Synthetic Organic Chemicals, United States Production and Sales."

⁶Represents values reported by tar distillers and excludes shipment values for tar, tar crudes, and for pitches reported by establishments classified in industry 3312, Blast Furnaces and Steel Mills, and industry 2911, Petroleum Refining.

⁷1967 and 1972 figures are not comparable. The 1967 totals for code 28692 13 include the values for urea. Due to revisions in the Standard Industrial Classification product classes, urea became code 28732 15 in 1972.

⁸For quantity information, refer to the U.S. Treasury Department, Internal Revenue Service publication: Alcohol and Tobacco--1972. Excludes shipments reported as rubbing alcohol (primary to industry 2834, Pharmaceutical Preparations), and as antifreeze (primary to industry 2899, Chemical Preparations, N.E.C.).

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9

BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9

EE.....\$1.0 to \$19.9

FF.....\$20.0 to 49.9

GG.....\$50.0 and over

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies

¹The 1967 data include the values for urea. Due to revisions in the Standard Industrial Classification product classes, urea became product code 28732 15 in 1972.

- Represents zero.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²Totals prior to 1972 include the values for urea. Due to revisions in the Standard Industrial Classification product classes, urea became product code 28732 15 in 1972.

EXPLANATORY TEXT

AGRICULTURAL CHEMICALS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2873—Nitrogenous Fertilizers
- 2874—Phosphatic Fertilizers
- 2875—Fertilizers, Mixing Only
- 2879—Pesticides and Agricultural Chemicals, N.E.C.*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2873.—NITROGENOUS FERTILIZERS

This industry comprises establishments primarily engaged in manufacturing nitrogenous fertilizer materials or mixed fertilizers from nitrogenous materials produced in the same establishment. Included are ammonia fertilizer compounds and anhydrous ammonia, nitric acid, ammonium nitrate, ammonium sulfate and nitrogen solutions, urea, and natural organic fertilizers (except compost) and mixtures.

Establishments primarily engaged in manufacturing industrial inorganic chemicals, n.e.c., are classified in industry 2819 (Industrial Inorganic Chemicals, N.E.C.) and industrial organic chemicals, n.e.c., in industry 2869 (Industrial Organic Chemicals, N.E.C.). For a detailed list of products of industry 2873, refer to table 6A, product codes 28731 11 to 28733 85.

*Note that the "short title" for this industry is used throughout the report.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual and a new SIC number and title were assigned. Industry 2873, Nitrogenous Fertilizers, was formed by combining synthetic ammonia, nitric acid, and ammonium compounds (formerly classified as product class 28191); urea (formerly in product class 28182); and fertilizer materials of organic origin (formerly product code 28712 85).

The effect of the revisions on the data are summarized in Table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, 76 establishments with 9.5 thousand total employment and \$453.0 million value added, now classified as industry 2873, would have been classified in different industries under the old SIC. Seven establishments with 1.3 thousand total employment and \$85.6 million value added would have been classified in industry 2818; 60 establishments with 8.1 thousand total employment and \$364.5 million value added would have been classified in industry 2819; and 9 establishments with .1 thousand total employment and \$2.9 million value added would have been classified in industry 2871.

Value of shipments and other receipts of the Nitrogenous Fertilizers Industry in 1972 totaled \$808.4 million. This included shipments of nitrogenous fertilizers (primary products) valued at \$647.5 million, shipments of other products (secondary products) valued at \$114.7 million, and miscellaneous receipts (mainly resales and contract work) of \$46.2 million.

Shipments of nitrogenous fertilizers (primary products) in 1972 represented 85 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of phosphatic fertilizers (\$20 to \$50 million) and industrial inorganic chemicals, n.e.c., (\$25.7 million).

Shipments of nitrogenous fertilizers (primary products) from establishments classified in industry 2873 in 1972 represented 69 percent (coverage ratio) of these products valued at \$937.3 million shipped by all industries. Other industries shipping nitrogenous fertilizers consisted mainly of industry 2869, Industrial Organic Chemicals, N.E.C., (\$94.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2873, these establishments accounted for 0 percent of value of shipments.

INDUSTRY 2874.—PHOSPHATIC FERTILIZERS

This industry comprises establishments primarily engaged in manufacturing phosphatic fertilizer materials or mixed fertilizers from phosphatic materials produced in the same establishment. Included are phosphoric acid; normal, enriched, and concentrated superphosphates; ammonium phosphates; nitrophosphates; and calcium metaphosphates.

Establishments primarily engaged in manufacturing industrial inorganic chemicals, n.e.c., are classified in industry 2819 (Industrial Inorganic Chemicals, N.E.C.). For a detailed list of products of industry 2874, refer to table 6A, product codes 28741 81 to 28743 78.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual and a new SIC number and title were assigned.

Industry 2874, Phosphatic Fertilizers, was formed by combining phosphoric acid, formerly classified in product class 28194, with superphosphate, other phosphatic fertilizer materials, and mixed fertilizers produced from one or more materials made in same plant, which formerly were classified as industry 2871. The production of fertilizer materials of organic origin, formerly product code 28712 85, was reclassified to industry 2873.

The effect of the revisions on the data are summarized in Table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, the 145 establishments with 14.9 thousand total employment and \$426.4 million value added which are now classified in industry 2874 would have been classified in different industries under the old SIC; 135 establishments with 14.0 thousand employees and \$400.9 million value added would have been classified in industry 2871; 10 establishments with 1.0 thousand employees and \$25.4 million value added would have been classified in industry 2819; and 9 establishments with .1 thousand employees and \$2.9 million value added, which would have been classified in industry 2871, are now classified in industry 2873.

Value of shipments and other receipts of the Phosphatic Fertilizers Industry in 1972 totaled \$1,178.9 million. This included shipments of phosphatic fertilizers (primary products) valued at \$973.3 million, shipments of other products (secondary products) valued at \$125.0 million, and miscellaneous receipts (mainly resales) of \$80.6 million.

Shipments of phosphatic fertilizers (primary products) in 1972 represented 89 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of nitrogenous fertilizers (\$79.5 million) and industrial inorganic chemicals, n.e.c., (\$28.2 million).

Shipments of phosphatic fertilizers (primary products) from establishments classified in industry 2874 in 1972 repre-

sented 92 percent (coverage ratio) of these products valued at \$1,052.5 million shipped by all industries. Other industries shipping phosphatic fertilizers consisted mainly of industry 2819, Industrial Inorganic Chemicals, N.E.C., (\$36.5 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2874, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2875.—FERTILIZERS, MIXING ONLY

This industry comprises establishments primarily engaged in mixing fertilizers from purchased fertilizer materials. For a detailed list of products of industry 2875, refer to table 6A, product codes 28752 13 to 28752 78.

The 1972 definition of this industry is the same as that used in the 1967 classification system. However, the SIC number has been changed from 2872 to 2875.

Value of shipments and other receipts of the Fertilizers, Mixing Only, Industry in 1972 totaled \$799.9 million. This included shipments of fertilizers, mixing only, (primary products) valued at \$631.2 million, shipments of other products (secondary products) valued at \$27.4 million, and miscellaneous receipts (mainly resales) of \$141.3 million.

Shipments of fertilizers, mixing only, (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 96 percent. Secondary products shipped by this industry in 1972 consisted mainly of agricultural chemicals, n.e.c., (\$10 to \$20 million).

Shipments of fertilizers, mixing only, (primary products) from establishments classified in industry 2875 in 1972 represented 97 percent (coverage ratio) of these products valued at \$651.9 million shipped by all industries. In 1967, the coverage ratio was also 97 percent. Other industries shipping fertilizers, mixing only, (primary products) consisted mainly of industry 2874, Phosphatic Fertilizers, (\$5 to \$10 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2875, these establishments accounted for 10 percent of value of shipments.

INDUSTRY 2879.—AGRICULTURAL CHEMICALS, N.E.C.
(Short Title)

This industry comprises establishments primarily engaged in the formulation and preparation of ready-to-use agricultural and household pest-control chemicals, including insecticides, fungicides, and herbicides from technical chemicals or concentrates; and the production of concentrates which require further processing before use as agricultural pesticides. This industry also includes establishments primarily engaged in manufacturing or formulating agricultural chemicals, not elsewhere classified, such as minor or trace elements and soil conditioners.

Establishments primarily engaged in manufacturing basic or technical agricultural pest-control chemicals including insecticides, fungicides, and herbicides such as lead and calcium arsenates and copper sulfate are classified in SIC group 281, Industrial Inorganic Chemicals, and DDT, BHC, 2,4-D carbamates, etc., in SIC group 286, Industrial Organic Chemicals. Establishments primarily engaged in manufacturing agricultural lime products are classified in SIC Major Group 32, Stone, Clay, and Glass Products. For a detailed list of products of industry 2879, refer to table 6A, product codes 28791 10 to 28794 89.

The 1972 definition of this industry has been significantly revised from that used in the 1967 SIC manual; however, the SIC number and title are unchanged. The industry as now constituted includes the manufacture of household insecticides and repellants which were previously classified as product class 28421 in industry 2842.

The effect of the revisions on the data are summarized in Table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC.

As can be seen from table 1C, 89 establishments with .8 thousand total employment and \$41.6 million value added which are now classified in industry 2879 would have been classified in industry 2842 under the old SIC.

Value of shipments and other receipts of the Agricultural Chemicals, N.E.C., Industry in 1972 totaled \$1,150.8 million. This included shipments of agricultural chemicals, n.e.c., (primary products) valued at \$867.0 million, shipments of other products (secondary products) valued at \$130.8 million, and miscellaneous receipts (mainly resales) of \$153.0 million.

Shipments of agricultural chemicals, n.e.c., (primary products) in 1972 represented 87 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 87 percent. Secondary products shipped by this industry in 1972 consisted mainly of industrial organic chemicals, n.e.c., (\$40.7 million) and industrial inorganic chemicals, n.e.c., (\$21.5 million).

Shipments of agricultural chemicals, n.e.c., (primary products) from establishments classified in industry 2879 in 1972 represented 72 percent (coverage ratio) of these products valued at \$1,196.2 million shipped by all industries. In 1967, the coverage ratio was also 72 percent. Other industries shipping agricultural chemicals, n.e.c., consisted mainly of industry 2869, Industrial Organic Chemicals, N.E.C., (\$107.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2879, these establishments accounted for 3 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last years in which censuses were conducted.

	Industry 2873	Industry 2874	Industry 2875	Industry 2879
1972.....	48	65	444	298
1967.....	(NA)	(NA)	496	223
1963.....	(NA)	(NA)	537	241

The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual industry level these estimates may be of limited reliability. However, they may be combined with other industry totals into broader aggregates which are of acceptable reliability.

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar of shipments (dollars)	Assets per dollar of shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of shipments	Establishments		All employees	Value added by manufacture	Value of shipments
	Total	With 20 employees or more				Total	With 20 employees or more

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those states where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown on the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

(D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Nitrogenous fertilizers (SIC 2873)	Phosphatic fertilizers (SIC 2874)	Fertilizers, mixing only (SIC 2875)	Agricultural chemicals, n.e.c. (SIC 2879)	Other industries

28790 00	Agricultural chemicals, n.s.k., for companies with 10 employees or more. (See note.) ¹²		(X)	(X)	89.7	(X)	(X)	75.3
28790 02	Agricultural chemicals, n.s.k., for companies with less than 10 employees. (See note.).....		(X)	(X)	17.1	(X)	(X)	6.2

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

(S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review.

¹Source: Current Industrial Reports series M28A, Inorganic Chemicals. The 1967 data include all revised figures published in the Current Industrial Reports series.

²Includes unspecified amounts of nitric acid produced but not withdrawn from the system.

³Excludes data for byproduct ammonia liquor and ammonium sulfate published by the Bureau of Mines. The quantities of byproduct ammonia liquor (NH₃ content) produced were 13,000 short tons in 1972 and 14,471 short tons in 1967. The quantities of byproduct ammonium sulfate produced were 561,000 short tons in 1972 and 745,000 short tons in 1967.

⁴Codes 28731 41 and 28731 43 combined with code 28731 59.

⁵Represents total amount of original solution produced, including amounts used for fertilizer, explosive, and other uses and amounts consumed in manufacturing other products such as nitrogen solutions (product code 28731 55).

⁶Excludes amounts converted to solid ammonium nitrate.

⁷Collected by U.S. International Trade Commission and published in U.S. International Trade Commission's monthly report S.O.C. series C. Annual data on urea produced for use in feed compounds, liquid fertilizers, solid fertilizers, and plastics are published in the U.S. International Trade Commission's annual report, "Synthetic Organic Chemicals, U.S. Production and Sales."

⁸Comparable data for 1967 are not available because of revisions to the 1972 Standard Industrial Classification Manual.

⁹In 1967, phosphoric acid was part of product class 28194. Separate data as reported in the census of manufactures are not available.

¹⁰For product codes 28742 15, 28742 41, 28742 61, quantity data showing production, shipments plant consumption, and stocks are published in Current Industrial Reports series M28B, Inorganic Fertilizer Materials and Related Products.

¹¹Due to 1972 Standard Industrial Classification revisions, this code is not comparable to the 1967 SIC product code 28710 00 which totaled \$4.9 million.

¹²1967 and 1972 data for the product class "n.s.k." codes 28791, 28792, and 28793 are included with the industry "n.s.k." code 28790 00.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)

28794	Household insecticides and repellants.....	106.8							

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the data did not meet publication standards.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²For 1958, data for ammonium phosphates and other chemically processed phosphatic fertilizer materials were included in product class 28743.

³Data for product-class 28752 combined with product class 28743 for 1958.

EXPLANATORY TEXT

MISCELLANEOUS CHEMICAL PRODUCTS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2891—Adhesives and Sealants
- 2892—Explosives
- 2893—Printing Ink
- 2895—Carbon Black
- 2899—Chemicals and Chemical Preparations, N.E.C.*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2891.—ADHESIVES AND SEALANTS

This industry comprises establishments primarily engaged in manufacturing industrial and household adhesives, glues, calking compounds, sealants, and linoleum, tile, and rubber cements from vegetable, animal, or synthetic plastics materials, purchased or produced in the same establishment. Establishments primarily engaged in manufacturing gelatin and sizes are classified in industry 2899, and vegetable gelatin or agar-agar in industry 2833. For a detailed list of products of industry 2891, refer to table 6A, product codes 28913 11 to 28915 58.

The statistics for this industry, as classified under the 1972 edition of the SIC manual, were unchanged as to code number

from the previous classification, but were significantly changed in comparison with data classified by the previous system. The industry as now constituted includes synthetic resin adhesives from resins manufactured in the same establishment (formerly in industry 2821), calking compounds and sealants (formerly in industry 2851), rubber cement (formerly in industry 3069), and sealants, n.e.c. (formerly in industry 2899), and excludes gelatin and sizes (now in industry 2899).

The effect of the revisions on the data are summarized in table 1C, "Composition of the new (1972) SIC industries based on old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, 46 establishments with 1.7 thousand employees (formerly included in industry 2821, Plastics Materials and Resins); 37 establishments with 2.6 thousand employees (formerly included in industry 2851, Paints and Allied Products); 37 establishments with 1.6 thousand employees (formerly included in industry 3069, Fabricated Rubber Products, N.E.C.) are now reclassified in industry 2891, Adhesives and Sealants. In addition, 16 establishments accounting for 1.9 thousand employees (formerly classified in industry 2891, Adhesives and Gelatin), were reclassified in industry 2899, Chemical Preparations, N.E.C..

Value of shipments and other receipts of the Adhesives and Sealants Industry in 1972 totaled \$928.0 million. This included shipments of adhesives and sealants (primary products) valued at \$782.7 million, shipments of other products (secondary products) valued at \$98.5 million, and miscellaneous receipts (mainly resales) of \$46.7 million.

Shipments of adhesives and sealants (primary products) in 1972 represented 89 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of paints and allied products (\$18.4 million) and plastics materials and resins (\$14.3 million).

Shipments of adhesives and sealants (primary products) from establishments classified in industry 2891 in 1972 represented 82 percent (coverage ratio) of these products valued at \$954.3 million shipped by all industries. Other industries shipping adhesives and sealants consisted mainly of industry 2851, Paints and Allied Products (\$43.0 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed

*Note that the "short title" for this industry is used throughout the report.

from industry averages. For industry 2891, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2892.—EXPLOSIVES

This industry comprises establishments primarily engaged in manufacturing explosives such as sporting powder, blasting powder, high explosives, nitrated carbohydrates, safety fuses, and blasting and detonating caps. Included in this industry are government-owned plants operated by private firms for the account of the Federal Government. Establishments primarily engaged in manufacturing ammunition for small arms are classified in industry 3482 and fireworks and pyrotechnics such as flares (all kinds) and railroad torpedoes, in industry 2899. Establishments primarily engaged in shooting wells and also engaged in manufacturing nitroglycerine are included in the census of minerals. For a detailed list of products of industry 2892, refer to table 6A, product codes 28921 13 to 28921 71.

The code number as well as the definition of this industry was unchanged between 1967 and 1972.

The data include information for government-owned plants operated by private firms for the account of the Federal Government, but exclude information for government-owned and government-operated plants. Since the capital expenditures made by these privately operated government plants are paid for by current billings to the U.S. Government, these amounts are excluded from the statistics shown in this report which represent expenditures for privately owned facilities. The detailed product statistics appearing in table 6A, represent only the amounts and type of explosives produced by privately owned and privately operated plants.

Value of shipments and other receipts of the Explosives Industry in 1972 totaled \$408.7 million. This included shipments of explosives (primary products) valued at \$225.3 million, shipments of other products (secondary products) valued at \$20.6 million, and miscellaneous receipts (mainly contract work) of \$162.8 million.

Shipments of explosives (primary products) in 1972 represented 92 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 93 percent. Secondary products shipped by this industry in 1972 consisted mainly of nitrogenous fertilizers and industrial organic chemicals, n.e.c.

Shipments of explosives (primary products) from establishments classified in industry 2892 in 1972 represented 95 percent (coverage ratio) of these products valued at \$237.6 million shipped by all industries. In 1967, the coverage ratio was 93 percent. Other industries shipping explosives consisted mainly of industry 2869, Industrial Organic Chemicals, N.E.C. (over \$2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2892, these establishments accounted for 4 percent of value of shipments.

INDUSTRY 2893.—PRINTING INKS

This industry comprises establishments primarily engaged in manufacturing printing ink, gravure ink, screen process ink, and lithographic ink. For a detailed list of products of industry 2893, refer to table 6A, product codes 28931 05 to 28935 98.

The statistics for this industry as classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system.

Value of shipments and other receipts of the Printing Ink Industry in 1972 totaled \$508.4 million. This included shipments of printing ink (primary products) valued at \$460.7 million, shipments of other products (secondary products) valued at \$24.9 million, and miscellaneous receipts (mainly resales) of \$22.7 million.

Shipments of printing ink (primary products) in 1972 represented 95 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 93 percent. Secondary products shipped by this industry in 1972 consisted mainly of paints and allied products (\$9.1 million), cyclic crudes and intermediates and lithographic platemaking services (both over \$2 million).

Shipments of printing ink (primary products) from establishments classified in industry 2893 in 1972 represented 93 percent (coverage ratio) of these products valued at \$498.0 million shipped by all industries. In 1967, the coverage ratio was 95 percent. Other industries shipping printing ink consisted mainly of industry 2851, Paints and Allied Products (\$9.8 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2893, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2895.—CARBON BLACK

This industry comprises establishments primarily engaged in manufacturing carbon black (channel and furnace black).

The code number as well as the definition of this industry was unchanged between 1972 and 1967.

Value of shipments and other receipts of the Carbon Black Industry in 1972 totaled \$227.0 million.

Shipments of carbon black (primary products) in 1972 represented a minimum of 95 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 100 percent.

Shipments of carbon black (primary products) from establishments classified in industry 2892 in 1972 represented a minimum of 95 percent (coverage ratio) of these products valued at \$227.1 million shipped by all industries. In 1967, more than 95 percent of the total value of carbon black were shipped by plants, classified in industry 2895.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2895, these establishments accounted for less than 1 percent of the value of shipments.

INDUSTRY 2899.—CHEMICAL PREPARATIONS, N.E.C. (Short Title)

This industry comprises establishments primarily engaged in manufacturing miscellaneous chemical preparations, not elsewhere classified, such as fatty acids, essential oils, gelatin (except vegetable), sizes, bluing, laundry soaps, writing and stamp pad inks; and industrial compounds, such as boiler and heat insulating compounds, metal, oil, and water treating compounds, waterproofing compounds; and chemical supplies for foundries.

Establishments primarily engaged in manufacturing vegetable gelatin (agar-agar) are classified in industry 2833 and dessert preparations based on gelatin in industry 2099.

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President.

The code number for this industry in the 1972 revision of the SIC is unchanged, but the content of the industry has been slightly changed from the previous classification system. The industry as now constituted includes gelatin, except ready-to-eat desserts, (formerly classified in industry 2891), sizes (formerly in industry 2891), and embalming chemicals (formerly in industry 3994), and excludes sealants, n.e.c. (now classified in industry 2991).

The effect of the revisions on the data are summarized in table 1C, "Composition of new (1972) SIC industries based on old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, 16 establishments with 1.9 thousand employees (formerly included in industry 2891, Adhesives and Gelatin); and 7 establishments with 0.2 thousand employees (formerly included in industry 3994, Morticians' Goods), are now classified in industry 2899, Chemical Preparations, N.E.C.

Value of shipments and other receipts of the Chemical Preparations, N.E.C., Industry in 1972 totaled \$2,203.5 million. This included shipments of chemical preparations, n.e.c., (primary products) valued at \$1,675.0 million, shipments of other products (secondary products) valued at \$321.6 million, and miscellaneous receipts (mainly resales) of \$205.7 million.

Shipments of chemical preparations, n.e.c., (primary products) in 1972 represented 84 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 82 percent. Secondary products shipped by this industry in 1972 consisted mainly of industrial organic chemicals (\$44.9 million) and soaps and other detergents (\$16.6 million).

Shipments of chemical preparations, n.e.c., (primary products) from establishments classified in industry 2899 in 1972 represented 75 percent (coverage ratio) of these products valued at \$2,228.3 million shipped by all industries. In 1967, the coverage ratio was 74 percent. Other industries shipping chemical preparations, n.e.c., consisted mainly of industry 2869, Industrial Organic Chemicals, N.E.C., (\$81.5 million) and industry 2842, Polishes and Sanitation Goods (\$61.9 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2899, these establishments accounted for 8 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Year ¹	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials, fuels, etc.	Value of industry shipments	Capital expenditures, new	Gross value of fixed assets	End-of-year inventories	Specialization ratio	Coverage ratio

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 2891	Industry 2892	Industry 2893	Industry 2895	Industry 2899
1972.....	316	55	213	11	1,485
1967.....	(NA)	37	207	11	1,275
1963.....	(NA)	41	216	8	1,312

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the data did not meet publication standards. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample or establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²Explosives, total includes in addition to privately owned establishments, government-owned, contractor-operated plants. See industry 2892, privately owned and operated establishments, below.

³Data include value added for government-owned, contractor-operated plants which was estimated based upon averages reported for commercial establishments in prior years.

⁴Data exclude government-owned materials furnished to government-owned, contractor-operated plants and includes fuel and electricity purchased by or for these establishments.

⁵Data include a calculated value of shipments for government-owned, contractor-operated plants comprised of adjusted value added (estimated as described in footnote 2) plus the cost of fuels and electricity energy.

⁶Includes expenditures for plants under construction but not in operation. Capital expenditures of government-owned, contractor-operated plants are excluded from the totals for the industry.

⁷Government-owned, privately operated establishments did not enter into the calculation of "primary product specialization ratio" or "coverage ratio" as all dollar receipts for these establishments were included in "miscellaneous receipts."

⁸This is a minimum percentage. The exact percentage is withheld to avoid disclosing figures for individual companies.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Assets per dollar of shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of shipments	Establishments		All employees	Value added by manufacture	Value of shipments
	Total	With 20 employees or more				Total	With 20 employees or more			
New Industry 2891.--Adhesives and Sealants.....	463	187	14.9	426.6	928.0	(X)	(X)	(X)	(X)	(X)
Old Industry 2821.--Plastics Materials and Resins.....	46	24	1.7	41.9	123.2	323	263	54.8	2,160.5	4,478.2
Old Industry 2851.--Paints and Allied Products.....	37	24	2.6	76.9	121.2	1,599	687	66.0	1,792.4	3,824.3
Old Industry 2891.--Adhesives and Gelatin.....	343	119	9.0	259.2	589.0	359	132	10.9	340.7	745.0
Old Industry 3069.--Fabricated Rubber Products, N.E.C....	37	20	1.6	48.6	94.6	1,110	600	98.0	1,551.3	2,795.5

Old Industry 3994.--Morticians Goods.....	7	3	.2	3.5	5.1	515	189	14.8	210.3	391.9
Other Industries ¹	19	14	1.4	41.8	91.7	(X)	(X)	(X)	(X)	(X)

(X) Not applicable.

¹These data are for a miscellaneous group of establishments that were classified in the industry because of shifts in their product classification. Since a number of industries are involved, separate data would disclose operations of individual companies and thus cannot be shown.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

(D) Withheld to avoid disclosing figures for individual companies.
shown (under 50 thousand dollars or man-hours; under 50 employees).

(Z) Less than half of the unit of measurement

¹The portion of product shipments (both primary and secondary) of the industry represented by primary products.²Government-owned, privately operated establishments did not enter into the calculation of "primary product specialization ratios" or "coverage ratio" as all dollar receipts for these establishments were included in "miscellaneous receipts."³This is a minimum percentage. The exact percentage is withheld to avoid disclosing figures for individual companies.⁴The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)

(D) Withheld to avoid disclosing figures for individual companies.

(Z) Less than half of the unit of measurement shown.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio
		(million dollars)	(million dollars)	(million dollars)	(million dollars)	Col. B Col. B & C (percent)	(million dollars)	(million dollars)	(million dollars)	Col. B Col. F (percent)

1967..	1,381.6	1,054.2	224.6	102.7	82	1,431.6	1,054.2	377.4	74

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹Government-owned, privately operated establishments did not enter into the calculation of "primary product specialization ratio" or "coverage ratio" as all dollar receipts for these establishments were included in "miscellaneous receipts."

²This is a minimum percentage. The exact percentage is withheld to avoid disclosing figures for individual companies.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

28995 00	Essential oils, fireworks and pyrotechnics, sizes, and chemical preparations, n.e.c., n.s.k.....	(X)	(X)	(X)	(X)
28990 00	Chemical preparations, n.e.c., n.s.k., for companies with 10 employees or more. (See note.).....	(X)	(X)	(X)	(X)
28990 02	Chemical preparations, n.e.c., n.s.k., for companies with less than 10 employees. (See note.).....	(X)	(X)	(X)	(X)

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review.

¹This product class total for 1972 and 1967 does not include the "n.s.k." product code ending with "00." See footnotes 4 and 5.

²For 1967, soybean adhesives (code 28911 43 in 1967) were combined with "other formulated and prepared adhesives" (code 28911 79 in 1967), and are now classified in product class 28914 --.

³For 1967, mucilage (code 28911 77 in 1967) was combined with "other formulated and prepared adhesives" (code 28911 79 in 1967), now classified in product class 28914 --.

⁴Due to 1972 revisions in the Standard Industrial Classification product classes, separate totals for n.s.k. codes 28913 00 and 28914 00 are unavailable. For 1972 and 1967, the value of 28913 00 is included with the total for 28194 00.

⁵Due to 1972 revisions in the Standard Industrial Classification product classes, the total for n.s.k. code 28915 00 is unavailable. For 1972 and 1967, it is included in the total for n.s.k. code 28518 00.

⁶Code 28921 13 combined with 28921 27.

⁷Total for 1967 is included in code 28921 27, other industrial explosives.

⁸For 1972, data for product codes 28921 41, 28921 47, 28921 51 are combined with 28921 61. For 1967, data for product codes 28921 41 and 28921 51 are combined with 28921 61.

⁹For additional detail on the production and shipments of channel and furnace carbon black, see the "Minerals Yearbook" published by the Bureau of Mines, Department of the Interior.

¹⁰Total for 1967 does not include value for code 28995 83, which was part of code 39943 98 in 1967.

¹¹Total for 1967 was revised to include values for gelatin, except ready-to-eat desserts (product class 28994), and values for sizes (product codes 28995 63 and 28995 65).

¹²For 1972, includes between 50 and 100 thousand tons of evaporated salt valued at less than \$5 million and shipped by establishments classified in the mineral industries. Comparable 1967 data are also between 50 and 100 thousand tons valued at less than \$5 million. For annual information on evaporated salt, rock salt, and salt in brine, see Bureau of Mines "Minerals Yearbook."

¹³Total for 1967 revised to include values for sizes (product codes 28995 63 and 28995 65).

¹⁴Excludes unspecified amount of permanent-type antifreeze preparations classified as product code 28692 13, acyclic organic chemicals.

¹⁵Product code 28995 53 included in code 28995 98 for 1972 and 1967.

¹⁶Product code 28995 73 included in code 28995 98 for 1967.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)

(NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.

²The individual products codes included in this class of products for 1972 differ from the 1967 definition. Products shifting into or out of this class of products represent approximately 14 percent of the total 1967 shipments of the U.S. level.

³Totals prior to 1972 do not include values for embalming chemicals, product code 28995 83, which was part of code 39943 98. Totals prior to 1972 were revised to include values for gelatin, except ready-to-eat desserts, product class 28994.

⁴Total for 1967 revised to include values for sizes, product codes 28995 63 and 28995 65, which, for 1972 are classified in product class 28995.

TABLE 7A. Materials Consumed, by Kind: 1972 and 1967

(See appendix, Explanation of Terms)

1972 code	Material	Basis	Unit of measure	Consumption of materials received from other establishments			
				1972		1967

Note: In 1967, data for manufactured mixed gas, blast furnace gas, and coke oven gas were included in code 131300, natural gas. In 1971, data for these gases were included in code 960011, other fuels.

- Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the data did not meet publication standards.
(Z) Less than half of the unit of measurement shown.

MAJOR GROUP 29

Petroleum and Coal Products

29A Petroleum and coal products

This major group includes establishments primarily engaged in petroleum refining, manufacturing paving and roofing materials, and compounding lubricating oils and greases from purchased materials. Establishments manufacturing and distributing gas to consumers are classified in public utilities industries, and those primarily engaged in producing coke and byproducts in Major Group 33.

¹The figures for 1939 through 1972 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.²For the period 1954 to 1972, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work in process during the year. For 1921 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture. See "Value Added by Manufacture" in Introduction.³The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.⁴The figures for 1958 to 1972 include expenditures for plants under construction and not yet in operation.⁵See appendix C of the General Summary for the 1972 changes in the Standard Industrial Classification.⁶In addition to data for operating establishments, 1954, 1958, 1963, 1967, and 1972 data are shown for manufacturer's central administrative offices and auxiliary units. Similar data are shown for the years 1949 to 1953 and 1955 to 1957 in annual survey of manufactures volumes. Data for these units are not available for the years prior to 1949.⁷The 1957 edition of the Standard Industrial Classification classified beehive coke ovens and by-product coke ovens in Major Group 33. Such establishments were previously included in Major Group 29, Petroleum and Coal Products. However, this change was reflected in the tabulations for 1955 annual surveys of manufactures. Data for 1954 were retabulated on this basis and are the source of the data labeled "Revised". Figures labeled "Original" for 1954 and data for prior years include beehive and by-product coke ovens.

Footnotes continued on next page.

General Statistics: 1972 and Earlier Years—Continued

Footnotes for table 1.—Continued

⁸These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

⁹The 1947 figures have been revised to exclude data for byproduct coke plants operated in conjunction with public utilities manufacturing and distributing gas, and to include data for establishments primarily engaged in shipping lubricants and greases made from animal and vegetable oils classified in industry 2899, in 1947. The figures for 1949 to 1953 cannot be revised to include these greases.

¹⁰Figures for years prior to 1939 exclude byproduct coke ovens owned by city gas companies. Such ovens represent less than 2 percent of the total value of products for the petroleum and coal products group for 1939.

¹¹Excludes a few establishments engaged principally in blending and compounding lubricating oils.

¹²Figures for years prior to 1929 exclude lubricants, n.e.c., and paving mixtures and blocks. These industries represented 4 percent of the figure for number of production workers and 5 percent of the figure for value added by manufacture, shown for the petroleum and coal products group for 1929. Prior to 1929, the lubricants, n.e.c., industry is included in the series for chemical and allied products group.

¹³Figures for years prior to 1909 exclude fuel briquets and roofing felts and coating. For 1909, these industries represented 6 percent of the figure for number of production workers and 9 percent of the figure for value added by manufacture shown for the petroleum and coal products group.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

²The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

EXPLANATORY TEXT

PETROLEUM AND COAL PRODUCTS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2911—Petroleum Refining**
- 2951—Paving Mixtures and Blocks**
- 2952—Asphalt Felts and Coatings**
- 2992—Lubricating Oils and Greases**
- 2999—Products of Petroleum and Coal, N.E.C.***

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2911.—PETROLEUM REFINING

This industry comprises establishments primarily engaged in producing gasoline, kerosene, distillate fuel oils, residual fuel oils, lubricants, and other products from crude petroleum and its fractionation products through straight distillation of crude oil, redistillation of unfinished petroleum derivatives, and cracking or other processes. Establishments primarily engaged in producing natural gasoline from natural gas are classified in mining industries. Establishments manufacturing lubricating oils and greases by blending and compounding purchased materials and those primarily rerefining used lubricating oils are included in industry 2992. For a detailed list of products

of industry 2911, refer to table 6A, product codes 29111 11 to 29110 98.

The 1972 definition of this industry has been slightly revised from that used in the 1967 SIC manual. However, the SIC number and title are unchanged. Establishments primarily engaged in rerefining used lubricating oils are now classified in industry 2992; they were classified in industry 2911 in 1967 and prior years. The change in classification had no significant effect on data for either industry 2911 or industry 2992.

Value of shipments and other receipts of the Petroleum Refining Industry in 1972 totaled \$25,921.1 million. This included shipments of petroleum refinery products (primary products) valued at \$24,590.1 million, shipments of other products (secondary products) valued at \$322.3 million, and miscellaneous receipts (mainly resales) of \$1,008.7 million.

Shipments of petroleum refinery products (primary products) in 1972 represented 99 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 98 percent. Secondary products shipped by this industry in 1972 consisted mainly of industrial organic chemicals, n.e.c., (\$110.3 million).

Shipments of petroleum refinery products (primary products) from establishments classified in industry 2911 in 1972 represented 97 percent (coverage ratio) of these products valued at \$25,414.8 million shipped by all industries. In 1967, the coverage ratio was also 97 percent. Other industries shipping petroleum refinery products consisted mainly of industry 2869, Industrial Organic Chemicals, N.E.C., (\$132.6 million).

Lubricating oils, lubricating oil base stocks, and lubricating greases are not only produced by petroleum refineries but are also produced from purchased materials by plants blending and compounding lubricants and are classified in industry 2992, Lubricating Oils and Greases. Plants classified in industries 2911 and 2992 shipped substantially all of the lubricating oils and greases, valued at \$1,536.7 million, with industry 2911 accounting for 58 percent.

Oils are frequently transferred from one refinery to another for further processing and blending. This introduces some duplications in the value of products shipped by the Petroleum Refining Industry, as shown in tables 1, 2, 3, 4, and 5. To eliminate duplication in the statistics for individual products, figures were collected on the amount of oil received by refineries during the year. Net (unduplicated) shipments were calculated for the United States as a whole by subtracting "Receipts" from the quantity shipped. (See table 6A.) These net shipments represent the quantity of petroleum products made available for consumption by the "Petroleum Refining" and "Lubricating Oils and Greases" industries.

* Note that the "short title" for this industry is used throughout the report.

Industry 2911 also includes establishments primarily engaged in the production of petroleum-based chemicals (petrochemicals). Detailed product statistics for liquefied refinery gases used as chemical raw material were not collected since these data are reported to the U.S. International Trade Commission and published in the report, "Synthetic Organic Chemicals, United States Production and Sales."

Unlike most manufacturing industries where the receipts for contract work are reported as such, plants in industry 2911 processing oil on a contract basis for other companies were requested to report the commercial cost of all materials received and the market values, f.o.b. plant, for the products shipped.

Petroleum product statistics shown in this report are not directly comparable with the Bureau of Mines figures published in the Minerals Yearbook. The census of manufactures collects data on shipments, whereas the Bureau of Mines figures are in terms of "output" (production).

Data showing net shipments of gas liquids and related products covered in the 1972 Economic Censuses appear in the reports for the 1972 Census of Mineral Industries. Table 7A contains data showing the consumption of selected materials. Other data relating to "inputs" of materials appear as "receipts" in table 6A.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2911, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2951.—PAVING MIXTURES AND BLOCKS

This industry comprises establishments primarily engaged in manufacturing asphalt and tar paving mixtures, and paving blocks made of asphalt, creosoted wood, and various compositions of asphalt or tar with other materials. Establishments primarily engaged in manufacturing brick, concrete, granite, and stone paving blocks are classified in SIC Major Group 32. For a detailed list of products of industry 2951, refer to table 6A, product codes 29510 11 to 29510 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Paving Mixtures and Blocks Industry in 1972 totaled \$922.6 million. This included shipments of paving mixtures and blocks (primary

products) valued at \$806.8 million, shipments of other products (secondary products) valued at \$64.0 million, and miscellaneous receipts (mainly resales) of \$51.8 million.

Shipments of paving mixtures and blocks (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 93 percent. Secondary products shipped by this industry in 1972 consisted mainly of ready-mixed concrete (\$14.9 million) and asphalt felts and coatings (\$10 to \$20 million).

Shipments of paving mixtures and blocks (primary products) from establishments classified in industry 2951 in 1972 represented 90 percent (coverage ratio) of these products valued at \$893.4 million shipped by all industries. In 1967, the coverage ratio was 95 percent. Other industries shipping paving mixtures and blocks consisted mainly of industry 3273, Ready-Mixed Concrete, (\$29.0 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2951, these establishments accounted for 8 percent of value of shipments.

INDUSTRY 2952.—ASPHALT FELTS AND COATINGS

This industry comprises establishments primarily engaged in manufacturing asphalt and other saturated felts in roll or shingle form, either smooth or faced with grit; and in manufacturing roofing cements and coatings. Establishments primarily engaged in manufacturing paint are classified in industry 2851 and linoleum and tile cement in industry 2891. For a detailed list of products of industry 2952, refer to table 6A, product codes 29521 11 to 29523 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Asphalt Felts and Coatings Industry in 1972 totaled \$1,011.4 million. This included shipments of asphalt felts and coatings (primary products) valued at \$869.5 million, shipments of other products (secondary products) valued at \$67.8 million, and miscellaneous receipts (mainly resales) of \$74.1 million.

Shipments of asphalt felts and coatings (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary).

The industry specialization ratio in 1967 was 91 percent. Secondary products shipped by this industry in 1972 consisted mainly of asbestos products (\$20 to \$50 million) and paving mixtures and blocks (\$10.3 million).

Shipments of asphalt felts and coatings (primary products) from establishments classified in industry 2952 in 1972 represented 96 percent (coverage ratio) of these products valued at \$902.2 million shipped by all industries. In 1967, the coverage ratio was 95 percent. Other industries shipping asphalt felts and coatings consisted mainly of industry 2951, Paving Mixtures and Blocks, (\$10 to \$20 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2952, these establishments accounted for 2 percent of value of shipments.

INDUSTRY 2992.—LUBRICATING OILS AND GREASES

This industry comprises establishments primarily engaged in blending, compounding, and rerefining lubricating oils and greases from purchased mineral, animal, and vegetable materials. Petroleum refineries engaged in the production of lubricating oils and greases are classified in industry 2911. For a detailed list of products of industry 2992, refer to table 6A, product codes 29920 21 to 29920 31.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. However, the SIC number and title are unchanged. Establishments primarily engaged in rerefining used lubricating oils, classified in industry 2911 in 1967 and prior years, are now classified in industry 2992. As a result of this revision, five establishments with 0.1 thousand employees and \$3.6 million value of shipments were shifted from industry 2911 to industry 2992. The effect of this shift was insignificant for both industries.

Value of shipments and other receipts of the Lubricating Oils and Greases Industry in 1972 totaled \$703.1 million. This included shipments of lubricating oils and greases (primary products) valued at \$612.6 million, shipments of other products (secondary products) valued at \$36.2 million, and miscellaneous receipts (mainly resales) of \$54.2 million.

Shipments of lubricating oils and greases (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 94 percent. Secondary products shipped by this industry in 1972

consisted mainly of petroleum refining products (\$8.4 million) and surface-active agents (\$5 to \$10 million).

Shipments of lubricating oils and greases (primary products) from establishments classified in industry 2992 in 1972 represented 40 percent (coverage ratio) of these products valued at \$1,536.7 million shipped by all industries. In 1967, the coverage ratio was 32 percent. However, lubricating oils and greases are also primary to industry 2911, Petroleum Refining. A coverage ratio computed on the basis of including both industries in which lubricating oils and greases are primary would total 98 percent in 1972. Lubricating oils and greases (primary products) shipped by industry 2911, Petroleum Refining, totaled \$894.8 million. Other industries shipping lubricating oils and greases consisted mainly of industry 2952, Asphalt Felts and Coatings, (\$5 to \$10 million) and industry 2899, Chemical Preparations, N.E.C., (\$5.1 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2992, these establishments accounted for 11 percent of value of shipments.

INDUSTRY 2999.—PETROLEUM AND COAL PRODUCTS, N.E.C. (Short Title)

This industry comprises establishments primarily engaged in manufacturing fuel briquettes, boulets, packaged fuel, powdered fuel, and other products of petroleum and coal, not elsewhere classified. For a detailed list of products of industry 2999, refer to table 6A, product codes 29990 15 and 29990 98.

The 1972 definition of this industry is the same as that used in the 1967 SIC manual.

Value of shipments and other receipts of the Petroleum and Coal Products, N.E.C., Industry in 1972 totaled \$137.6 million. This included shipments of petroleum and coal products, n.e.c., (primary products) valued at \$126.3 million, shipments of other products (secondary products) valued at \$1.5 million, and miscellaneous receipts (mainly resales) of \$9.8 million.

Shipments of petroleum and coal products, n.e.c., (primary products) in 1972 represented 99 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 99 percent.

Shipments of petroleum and coal products, n.e.c., (primary products) from establishments classified in industry

2999 in 1972 represented 91 percent (coverage ratio) of these products valued at \$139.2 million shipped by all industries. In 1967, the coverage ratio was 92 percent.

The figures for fuel briquettes and packaged fuel appearing in this report exclude the quantities and amounts shipped by establishments producing wood charcoal briquettes (industry 2861) as well as establishments classified in nonmanufacturing industries. They therefore differ from the figures published by the Bureau of Mines, U.S. Department of Interior, in the Minerals Yearbook which include data for nonmanufacturing establishments, such as retail or wholesale coal yards, and public utilities which produce some fuel briquettes as a sec-

ondary activity. The Census figures for fuel briquettes also include information for briquettes made from charcoal and sawdust (data which are omitted by the Bureau of Mines).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2999, these establishments accounted for 8 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 2911	Industry 2951	Industry 2952	Industry 2992	Industry 2999
1972.....	154	586	117	387	42
1967.....	276	553	115	256	38
1963.....	266	528	126	311	59

(NA) Not available. (S) Withheld because the data did not meet publication standards. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those states where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

1972 code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product special- ization ratio	Total, made in all industries	Made in this industry	Made in other industries	Coverage ratio

¹Includes lubricating oils and greases which are also primary to industry 2992, Lubricating Oils and Greases.

²A 1972 coverage ratio computed on the basis of including both industries to which lubricating oils and greases are primary would total 98 percent: 58 percent by industry 2911 and 40 percent by industry 2992. The remaining 2 percent was shipped by establishments in other industries. Computed on the basis of excluding industry 2911, the 1972 coverage ratio for industry 2992 is 95 percent.

³Included in the figures shown for this industry are lubricating oils and greases which are also primary to industry 2911, Petroleum Refining.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Petroleum refining (SIC 2911)	Paving mixtures and blocks (SIC 2951)	Asphalt felts and coatings (SIC 2952)	Lubricating oils and greases (SIC 2992)	Petroleum and coal products, n.e.c. (SIC 2999)	Other industries

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

1972 product code	Product	Unit of measure	Total product shipments including interplant transfers			
			1972		1967	
			Quantity	Value (million dollars)	Quantity	Value (million dollars)
2952- --	ASPHALT FELTS AND COATINGS—Continued					
29523 --	Asphalt and Tar Roofing and Siding Products.....		(X)	690.6	(X)	375.2
29523 11	Asphalt roofing: Smooth-surface roll roofing, including sanded, talc, mica, and other fine material surfacing, cap sheet, coated base sheet, and coated roofing sheet.....	Mil. sales sq..	23.7	50.5	16.9	26.5
29523 13	Mineral-surfaced roll roofing and cap sheet (including 19-inch selvage edged.).....	..do.....	13.8	44.0	13.7	30.5
	Shingles:					
29523 14	Self-sealing strip shingles 240 pounds or less.....	..do.....	49.3	388.1	19.1	114.9
29523 15	245 pounds or more.....	..do.....	1.5	17.4		
	Standard or regular strip shingles:					
29523 16	235 pounds or less.....	..do.....	7.5	57.8	23.3	119.5
29523 17	245 pounds or more.....	..do.....				
29523 18	Individual shingles, all styles.....	..do.....	3.0	25.8	4.0	20.7
	Asphalt siding products:					
29523 31	Roll form and shingle form, all patterns, felt base.....	..do.....	.1	.8	.4	1.1
29523 35	Mineral-surface insulating board base siding (all types and finished.).....	..do.....	(D)	(D)	.3	4.1
	Saturated felts:					
29523 51	Asphalt saturated, for built-up roofing systems, and for sheathing.....	1,000 s. tons.	871.5	78.2	864.6	47.7
29523 55	Tar saturated, for built-up roofing systems.....	..do.....	36.5	3.1	46.6	3.2
29523 98	Other prepared asphalt and tar products for roofing and siding, including board products and sheathings.....		(X)	(D)	(X)	2.8
29523 00	Asphalt and tar roofing and siding products, n.s.k.....		(X)	3.3	(X)	4.3
29520 00	Asphalt felts and coatings, n.s.k., for companies with 10 employees or more. (See note.).....		(X)	17.5	(X)	12.4
29520 02	Asphalt felts and coatings, n.s.k., for companies with less than 10 employees. (See note.).....		(X)	4.6	(X)	2.9
2999- --	PETROLEUM AND COAL PRODUCTS, N.E.C., TOTAL.....		(X)	139.2	(X)	79.6
29990 --	Petroleum and Coal Products, N.E.C.:					
29990 15	Packaged fuel and fuel briquettes, except wood charcoal briquettes.....	S. tons.....	(S)	9.9	(S)	11.5
29990 98	Other petroleum and coal products, including calcined petroleum coke.....		(X)	120.0	(X)	64.1
29990 00	Products of petroleum and coal, n.e.c., n.s.k., for companies with 10 employees or more. (See note.).....		(X)	8.1	(X)	2.9
29990 02	Products of petroleum and coal, n.e.c., n.s.k., for companies with less than 10 employees. (See note.).....		(X)	1.2	(X)	1.1

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review.

¹Reporting companies were requested to classify items in the same manner as billed by the shipper regardless of how the refinery (or blending and compounding establishments) would otherwise classify them.

²Represents the difference between "Total shipments" (Quantity) and "Receipts" (Quantity).

³Code 29111 98 included with code 29111 31 for 1967.

⁴Includes all finished gasolines (other than aviation and automotive gasoline), finished base stocks, and blending agents such as alkylate, polymers (dimer, codimer, etc.), hydropolymers (hydrodimer, hydrocodimer, etc.), cumene, isopetane, isohexane, neohexane, isoheptane, iso-octane, motor benzol (benzene), and other blending agents derived from petroleum (excludes natural gasoline).

⁵Detailed product statistics for liquefied gases used as chemical raw material are published by the U.S. International Trade Commission in the report "Synthetic Organic Chemicals, United States Production and Sales."

⁶Although respondents were requested to report receipts in the same manner as billed by the shipper, the figures indicate that items billed as other oils by the shipper were sometimes reported as receipts of "unfinished oils" or "lubricating oil base stock" for the refinery receiving these oils.

⁷Includes such products as cracking stock, unfinished gasoline requiring further distillation, naphtha stocks, soaps, wax distillate, and other unfinished petroleum oils. Excludes lubricating oil base stocks, natural gasoline, and cycle condensates.

⁸Includes light, medium, neutral, heavy neutral, and residual stocks.

⁹Includes flux for paving, roofing, waterproofing, mastic, and other purposes; cut-back asphalt, emulsified asphalt, and fluxes made in petroleum refineries; and other liquid asphaltic products except road oil and fuel oil used for heating purposes.

¹⁰Includes asphalt for paving, roofing, waterproofing, briquetting, mastic, pipe coating, molding composition, and other heavy asphalt products.

¹¹Product codes 29110 00 and 29110 02 included in figures for code 29110.

¹²Represents residual asphaltic oil used for surface treatment of roads and highways.

¹³Includes petroleum ether, rubber solvent, mineral spirits (petroleum spirits), varnish makers' and painters' naphtha, high-solvency naphtha, benzol diluent, lacquer diluent, cleaners' naphtha, stoddard solvent, extraction solvents, and other petroleum distillates shipped as solvents.

¹⁴Represents amorphous paraffin of melting point not under 145°.

¹⁵Includes oils for lubricating purposes and such nonlubrication purposes as transformer oil, hydraulic oil, processing oil, quenching oil, and liquid rust preventative.

¹⁶Includes greases for aviation, automotive, industrial, and railroad uses: launching grease; and cutting, drawing, and grinding compounds and paste. Also includes paste rust-preventative compounds and thread compounds.

¹⁷Code 29522 31 combined with code 29522 98 for 1967.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments (million dollars)		Product class and geographic area	Value of shipments (million dollars)

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9

BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9

EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9

GG.....\$50.0 and over

- Represents zero. (NA) Not available.

TABLE 6C. Product Classes—Value Shipped by All Manufacturing Establishments:
1958, 1963, 1967 to 1972

(In millions of dollars)

1972 code	Product class	1972	1971 ¹	1970 ¹	1969 ¹	1968 ¹	1967	1963	1958

(NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

Note: In 1967, data for manufactured mixed gas, blast furnace gas, and coke oven gas were included in code 131300, natural gas. In 1971, data for these gases were included in code 960011, other fuels.

- Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimates did not meet publication standards.
(Z) Less than half of the unit of measurement shown.

MAJOR GROUP 30

Rubber and Miscellaneous Plastics Products

30A Rubber and miscellaneous plastics products

This major group includes establishments manufacturing from natural, synthetic, or reclaimed rubber, gutta percha, balata, or gutta siak, rubber products such as tires, rubber footwear, mechanical rubber goods, heels and soles, flooring, and rubber sundries. This group also includes establishments primarily manufacturing tires, but establishments primarily recapping and retreading automobile tires are classified in industry 7534, Tires Retreading and Repair Shops. This group also includes establishments engaged in molding primary plastics for the trade, and manufacturing miscellaneous finished plastics products. The manufacture of elastic webbing is classified in Major Group 22; products made of elastic webbing and garments made from rubberized fabrics in Major Group 23; and synthetic rubber in industry 2822.

(X) Not applicable. (NA) Not available.

¹The figures for 1939 through 1972 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

²For the period 1954 to 1972, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work in process during the year. For 1921 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture. See "Value Added by Manufacture" in Introduction.

³The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

⁴The figures for 1958 to 1972 include expenditures for plants under construction and not yet in operation.

⁵Data for 1972 are not directly comparable to 1971 and earlier years. See appendix C of the General Summary for the 1972 changes in the Standard Industrial Classification.

⁶In addition to data for operating establishments, 1954, 1958, 1963, 1967, and 1972 figures are shown for manufacturer's central administrative offices and auxiliary units. Similar data are shown for the years 1949 to 1953, 1955 to 1957, 1959 to 1962, 1964 to 1966, and 1968 to 1971 in annual survey of manufactures volumes. Data for these units are not available for the years prior to 1949.

⁷Based upon the 1957 revisions of the Standard Industrial Classification Manual, establishments engaged in molding plastics products for the trade and fabricating miscellaneous finished plastics products were reclassified from Major Group 39, Miscellaneous Manufacturing Industries, to Major Group 30. Data for years prior to 1958 exclude data for plastics products.

⁸These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

⁹The figures for 1925 to 1972, but not for earlier years, include data for establishments primarily engaged in manufacture of rubber cement and rubber toy balloons. Value added by manufacture for 1925, excluding data for these establishments and on a basis comparable with earlier years, was \$536.6 million.

TABLE 2. General Statistics by Geographic Area: 1972 and 1967

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

²The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

EXPLANATORY TEXT

RUBBER AND MISCELLANEOUS PLASTICS PRODUCTS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 3011—Tires and Inner Tubes
- 3021—Rubber and Plastics Footwear
- 3031—Reclaimed Rubber
- 3041—Rubber and Plastics Hose and Belting
- 3069—Fabricated Rubber Products, N.E.C.
- 3079—Miscellaneous Plastics Products

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 3011.—TIRES AND INNER TUBES

This industry comprises establishments primarily engaged in manufacturing pneumatic casings, inner tubes, and solid and cushion tires for all types of vehicles, airplanes, farm equipment, and children's vehicles; tiring; and camelback and tire repair and retreading materials. Establishments primarily engaged in retreading tires are classified in service industry 7534, Tire Retreading and Repair Shops. For a detailed list of products of industry 3011, refer to table 6A, product codes 30111 11 to 30115 39.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Tires and Inner Tubes Industry in 1972 totaled \$5,747 million. This included shipments of tires and inner tubes (primary products) valued at \$4,870 million, shipments of other products (secondary products) valued at \$174 million, and miscellaneous receipts (mainly resales) of \$703 million.

Shipments of tires and inner tubes (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 95 percent. Secondary products shipped by this industry in 1972 consisted mainly of rubber and plastics hose and belting (\$42 million) and fabricated rubber products, n.e.c., (\$38 million).

Shipments of tires and inner tubes (primary products) from establishments classified in industry 3011 in 1972 represented 99 percent (coverage ratio) of these products valued at \$4,898 million shipped by all industries. In 1967, the coverage ratio was also 99 percent. Other industries shipping tires and inner tubes consisted mainly of industry 3069, Fabricated Rubber Products, N.E.C., (\$20 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3011, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 3021.—RUBBER AND PLASTICS FOOTWEAR

This industry comprises establishments primarily engaged in manufacturing all rubber and plastics footwear, waterproof fabric upper footwear, and other fabric upper footwear having rubber or plastic soles vulcanized to the uppers.

Establishments primarily engaged in manufacturing rubber, composition, and fiber heels, soles, soling strips, and related shoemaking and repairing materials are classified in industry 3069; and plastic soles and soling strips in industry 3079. For a detailed list of products of industry 3021, refer to table 6A, product codes 30211 21 to 30212 98.

The statistics for this industry, as classified under the 1972 edition of the SIC manual, were unchanged as to code number from the previous classification, but were significantly changed in comparison with data classified by the previous system.

Plastics footwear, which was classified in industry 3079 in 1967, is now included in industry 3021.

Value of shipments and other receipts of the Rubber and Plastics Footwear Industry in 1972 totaled \$600 million. This included shipments of rubber and plastics footwear (primary products) valued at \$491 million, shipments of other products (secondary products) valued at \$29 million, and miscellaneous receipts (mainly resales) of \$80 million.

Shipments of rubber and plastics footwear (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of fabricated rubber products, n.e.c., (\$15 million).

Shipments of rubber and plastics footwear (primary products) from establishments classified in industry 3021 in 1972 represented 99 percent (coverage ratio) of these products valued at \$494 million shipped by all industries.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3021, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 3031.—RECLAIMED RUBBER

This industry comprises establishments primarily engaged in reclaiming rubber from scrap rubber tires, tubes, and miscellaneous waste rubber articles by processes which result in devulcanized, depolymerized, or regenerated replasticized products containing added ingredients. These products are sold for use as a raw material in the manufacture of rubber goods with or without admixture with crude rubber or synthetic rubber.

Establishments primarily engaged in the assembly and wholesale sale of scrap rubber are classified in trade industries.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Reclaimed Rubber Industry in 1972 totaled \$30 million. This included shipments of reclaimed rubber (primary products) valued at \$29 million and shipments of other products (secondary products) valued at \$1 million.

Shipments of reclaimed rubber (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 83 percent.

Shipments of reclaimed rubber (primary products) from establishments classified in industry 3031 in 1972 represented 55 percent (coverage ratio) of these products valued at \$52 million shipped by all industries. In 1967, the coverage ratio was 75 percent. Other industries shipping reclaimed rubber consisted mainly of industry 3011, Tires and Inner Tubes, and industry 2869, Industrial Organic Chemicals, N.E.C.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3031, these establishments accounted for 4 percent of value of shipments.

INDUSTRY 3041.—RUBBER AND PLASTICS HOSE AND BELTING

This industry comprises establishments primarily engaged in manufacturing rubber and plastics hose and belting, including garden hose. Establishments primarily engaged in manufacturing rubber tubing are classified in industry 3069, plastic tubing in industry 3079, and flexible metallic hose in industry 3599 (Machinery, Except Electrical, N.E.C.). For a detailed list of products of industry 3041, refer to table 6A, product codes 30411 11 to 30416 81.

The Rubber and Plastics Hose and Belting Industry is included for the first time in the census of manufactures for 1972. The industry includes all of 1967 product class 30691 (rubber and plastics belts and belting); all of 1967 product class 30692 (rubber hose and tubing) except code 30692 81 (tubing, except medical and surgical and reinforced); part of 1967 product class 30795 (industrial plastics products); and part of 1967 product class 30798 (consumer and commercial plastics products, n.e.c.).

Value of shipments and other receipts of the Rubber and Plastics Hose and Belting Industry in 1972 totaled \$1,020 million. This included shipments of rubber and plastics hose and belting (primary products) valued at \$789 million, shipments of other products (secondary products) valued at \$133 million, and miscellaneous receipts (mainly resales) of \$98 million.

Shipments of rubber and plastics hose and belting (primary products) in 1972 represented 85 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of fabricated rubber products, n.e.c., (\$45 million).

Shipments of rubber and plastics hose and belting (primary products) from establishments classified in industry 3041 in 1972 represented 89 percent (coverage ratio) of these products valued at \$886 million shipped by all industries. Other industries shipping rubber and plastics hose and belting consisted mainly of industry 3011, Tires and Inner Tubes, (\$42 million) and industry 3079, Miscellaneous Plastics Products, (\$32 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3041, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 3069.—FABRICATED RUBBER PRODUCTS, N.E.C.

This industry comprises establishments primarily engaged in manufacturing industrial and mechanical rubber goods, rubberized fabrics and vulcanized rubber clothing, and miscellaneous rubber specialties and sundries. Establishments primarily engaged in rebuilding and retreading tires are classified in service industry 7534 (Tire Retreading and Repair Shops). For a detailed list of products of industry 3069, refer to table 6A, product codes 30693 11 to 30698 98.

The statistics for this industry, as classified under the 1972 edition of the SIC manual, were unchanged as to code number from the previous classification, but were significantly changed in comparison with data classified by the previous system. All of 1967 product class 30691 (rubber and plastics belts and belting) and all of 1967 product class 30692 (rubber hose and tubing) except for code 30692 81 (tubing, except medical and surgical and reinforced) are now classified in industry 3041, Rubber and Plastics Hose and Belting. Tubing, except medical and surgical and reinforced, is now included in product class 30695. In addition, seals and packing (former product codes 30695 26, 27, and 28) are now included in industry 3293; and latex and solvent-type cement (former product codes 30698 64 and 65) are now classified in industry 2891.

Value of shipments and other receipts of the Fabricated Rubber Products, N.E.C., Industry in 1972 totaled \$2,831 million. This included shipments of fabricated rubber products, n.e.c., (primary products) valued at \$2,261 million, shipments of other products (secondary products) valued at \$437 million, and miscellaneous receipts (mainly resales) of \$133 million.

Shipments of fabricated rubber products, n.e.c., (primary products) in 1972 represented 84 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of miscellaneous plastics products (\$141 million) and gaskets, packing and sealing devices, (\$63 million).

Shipments of fabricated rubber products, n.e.c., (primary products) from establishments classified in industry 3069 in 1972 represented 89 percent (coverage ratio) of these products valued at \$2,539 million shipped by all industries. Other industries shipping fabricated rubber products, n.e.c., consisted mainly of industry 3041, Rubber and Plastics Hose and Belting (\$45 million); industry 3011, Tires and Inner Tubes (\$38 million); and industry 3079, Miscellaneous Plastics Products (\$36 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3069, these establishments accounted for 4 percent of value of shipments.

INDUSTRY 3079.—MISCELLANEOUS PLASTICS PRODUCTS

This industry comprises establishments primarily engaged in molding primary plastics for the trade and fabricating miscellaneous finished plastics products. Establishments primarily engaged in manufacturing fabricated plastics products or plastics film, sheet, rod, nontextile monofilaments and regenerated cellulose products, and vulcanized fiber are classified in this industry, whether from purchased resins or from resins produced in the same plant. This industry also includes establishments primarily engaged in compounding purchased resins.

Establishments primarily engaged in manufacturing artificial leather are classified in industry 2295 (Coated Fabrics, Not Rubberized). For a detailed list of products of industry 3079, refer to table 6A, product codes 30791 10 to 30799 11.

The statistics for this industry, as classified under the 1972 edition of the SIC manual, were unchanged as to code number from the previous classification but were significantly changed in comparison with data classified by the previous system. The following product-class revisions were effective in 1972:

- (1) Product class 30791 (unsupported plastics film, sheets, sheeting, rods, tubes, and other stock shapes) now includes

EXPLANATORY TEXT—Continued

1967 product class 28211 (unsupported plastics film, sheets, rods, and tubes made by resin manufacturers;

(2) Product class 30795 (industrial plastics products) no longer includes plastics belting (now classified in industry 3041) and plastics packing and seals including O-rings (now classified in industry 3293);

(3) New product class 30798 (regenerated cellulosic products, except rayon) was product class 28212 in 1967;

(4) New product class 30799 (custom compounded purchased resins) was product class 28217 in 1967; and

(5) New product class 30790 (consumer and commercial plastics products, n.e.c., and miscellaneous plastics products, n.s.k.) includes part of 1967 product class 30798 (consumer and commercial plastics products, n.e.c.), all of 1967 product class 28219 (plastics and resin materials, n.s.k.), and the 1967 n.s.k. class 30790 (miscellaneous plastics products, n.s.k.).

In addition, several products of old product class 30798 are now classified in other industries. Male and female arctics and gaiters; protective footwear, unlined, single film; and other rubber and plastics footwear, including beach and shower slippers, are now classified in industry 3021. Also, plastics

garden hose, including perforated sprinkler, and all other plastic hose, except garden, are now included in industry 3041.

Value of shipments and other receipts of the Miscellaneous Plastics Products Industry in 1972 totaled \$10,704 million. This included shipments of miscellaneous plastics products (primary products) valued at \$9,732 million, shipments of other products (secondary products) valued at \$616 million, and miscellaneous receipts (mainly resales) of \$355 million.

Shipments of miscellaneous plastics products (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary).

Shipments of miscellaneous plastics products (primary products) from establishments classified in industry 3079 in 1972 represented 88 percent (coverage ratio) of these products valued at \$11,094 million shipped by all industries.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3079, these establishments accounted for 8 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Year ¹	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials, fuels, etc.	Value of industry shipments	Capital expenditures, new	Gross value of fixed assets	End-of-year inventories	Specialization ratio	Coverage ratio

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	1972 industry 3011	1972 industry 3021	1972 industry 3031	1972 industry 3041	1972 industry 3069	1972 industry 3079	1967 industry 3021	1967 industry 3069	1967 industry 3079
1972.....	136	82	19	68	965	6,795	(X)	(X)	(X)
1967.....	119	(X)	19	(X)	(X)	(X)	51	1,024	4,495
1963.....	105	(X)	7	(X)	(X)	(X)	44	1,046	4,101

(X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²New SIC industries 3021 and 3079 are not directly comparable to old SIC industries 3021 and 3079, respectively. However, the degree of change for industry statistics is less than 15 percent.

³New SIC industry 3069 is not comparable to old SIC industry 3069. The degree of change for industry statistics exceeds 15 percent.

¹The 1972 data on the new SIC basis are not strictly comparable to 1972 and prior-year data on the old SIC basis. (See footnote 2, table 1A.)

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of shipments	Establishments		All employees	Value added by manufacture	Value of shipments

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

(See appendix. Explanation of Terms)

- Represents zero. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

²The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

(See appendix, Explanation of Terms)

See footnotes at end of table.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972—Continued

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	All industries	Tires and inner tubes (SIC 3011)	Rubber and plastics footwear (SIC 3021)	Reclaimed rubber (SIC 3031)	Rubber and plastics hose and belting (SIC 3041)	Fabricated rubber products, n.e.c. TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 5A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

Product code	Industry, class of products, and miscellaneous receipts	Other industries	Product code	Industry, class of products, and miscellaneous receipts	Other industries
	Listing of other industries with over \$2 million shipments of primary products--Continued			Listing of other industries with over \$2 million shipments of primary products--Continued	
3079-	2431 Millwork.....	5.6	3079-	3444 Sheet metalwork.....	3.1

30790 91	Other consumer and commercial plastics products, n.e.c. ¹⁴ ...		(X)	(X)	(NA)
30790 00	Miscellaneous plastics products, n.s.k., for companies with 10 employees or more. (See note.).....		(X)	(X)	315.6
30790 02	Miscellaneous plastics products, n.s.k., for companies with less than 10 employees. (See note.).....		(X)	(X)	80.5
	As reported in Current Industrial Reports MA-30D ¹²		(X)	(X)	685.3
30790 71	Utility containers.....		(X)	(X)	68.6
30790 73	Flower pots, flower boxes, and planters.....		(X)	(X)	12.0
30790 45	Shoe products.....		(X)	(X)	55.0
30790 65	Tubing under 1/2-inch inside diameter, except medical, surgi- cal, and reinforced.....	1,000 units....	(X)	(X)	11.6
30790 81	Hardware.....	...do.....	(X)	(X)	13.4
30790 83	Picnic jugs, cooler chests, and ice buckets (including foamed).	...do.....	(X)	(X)	23.5
30790 98	Other consumer and commercial plastics products, n.e.c.....		(X)	(X)	266.0
30790 00	Other consumer and commercial plastics products, n.e.c., n.s.k. Plastics products, n.s.k. (estimated for companies with less than \$250 thousand in shipments).....		(X)	(X)	25.6
			(X)	(X)	209.6

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

(S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review.

¹Product code 30113 35 included in product code 30113 00.

²Product code 30114 24 included in product codes 30114 26 and 30114 27.

³Quantity data as published in the 1972 Current Industrial Report series MA-30A, Rubber Supply and Distribution, were 194,447 long tons produced.

⁴Product code 30416 65 included in code 30416 00.

⁵Codes 30695 11 and 30695 75 included in code 30695 98 for 1967.

⁶SIC code 30695 98 in 1967 included codes now classified in industry 3293 causing a significant drop in value in 1972.

⁷The difference between the Census total for 1972 (\$11,091.8 million) and the Current Industrial Report series MA-30D, "Shipments of Selected Plastics Products," figure for 1972 (\$7,883.1 million) is due partly to changes in the Standard Industrial Classification. The MA-30D for 1972 did not collect data for new product classes 30798, 30799, and part of 30790. However, the large discrepancy between the two totals is due mainly to undercoverage on the part of the CIR. The CIR panel, the majority of which is selected every 5 years from the census of manufactures, excludes establishments with value of shipments of less than \$250 thousand. In an industry with rapid growth rates, the CIR panel will tend to become undercovered over a 5-year period. A large number of establishments will be added to the 1973 MA-30D panel, and a substantial increase in the revised 1972 value of shipments is anticipated.

⁸The 1972 product class totals and the 1972 data for each product line will be published separately in the 1973 MA-30D.

⁹To avoid disclosing figures for individual companies, "Less than 3.0 mils" and "Not specified by gage" are shown as a combined figure.

¹⁰Includes products, valued at approximately 3 percent of the 1967 product class total, which are now classified in other industries.

¹¹Not included in 1972 Current Industrial Reports series MA-30D.

¹²The census of manufactures and Current Industrial Report series MA-30D totals for product class 30790 are not comparable, because data for plastics and resin materials, n.e.c., (product codes 30790 11 to 30790 49) were not collected on the MA-30D for 1972 and 1967.

¹³Included in 30790 19 in 1972.

¹⁴Census product code 30790 91 includes Current Industrial Reports series MA-30D product codes 30790 45, 71, 73, 81, 83, and 98.

¹⁵Included in 30790 49 in 1967.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9
GG.....\$50.0 and over

(NA) Not available.

¹The individual product codes included in this class of products for 1972 differ significantly from the prior years. Products shifting into or out of this class of products represent more than 15 percent of the total shipments value at the U.S. level.

²The individual product codes included in this class of products for 1972 differ from the 1967 definition. Products shifting into or out of this class of products represent approximately 13 percent of the total 1967 shipments at the U.S. level.

³The individual product codes included in this class of products for 1972 differ from the 1967 definition. Products shifting into or out of this class of products represent approximately 3 percent of the total 1967 shipments at the U.S. level.

- Represents zero. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²The individual product codes included in this class of products for 1972 differ significantly from the prior years. Products shifting into or out of this class of products represent more than 15 percent of the total shipments value at the U.S. level.

³The individual product codes included in this class of products for 1972 differ from the 1967 definition. Products shifting into or out of this class of products represent approximately 13 percent of the total 1967 shipments at the U.S. level.

⁴The individual product codes included in this class of products for 1972 differ from the 1967 definition. Products shifting into or out of this class of products represent approximately 3 percent of the total 1967 shipments at the U.S. level.

Note: In 1967, data for manufactured mixed gas, blast furnace gas, and coke oven gas were included in code 131300, natural gas. In 1971, data for these gases were included in code 960011, other fuels.

- Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimates did not meet publication standards.

MAJOR GROUP 31

Leather and Leather Products

- 31A Tanning, industrial leather goods, and shoes
- 31B Leather gloves, luggage, and miscellaneous leather goods

This major group includes establishments engaged in tanning, currying, and finishing hides and skins, and establishments manufacturing finished leather and artificial leather products and some similar products made of other materials. Leather converters are also included.

TABLE 1. General Statistics: 1972 and Earlier Years

(See appendix, Explanation of Terms)

Year and item	Establishments		All employees ¹		Production workers			Value added by manufacture ²	Cost of materials ³	Value of industry shipments ³	Capital expenditures, new ⁴

(X) Not applicable. (NA) Not available.

¹The figures for 1939 through 1972 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

²For the period 1954 to 1972, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work in process during the year. For 1921 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture. See "Value Added by Manufacture" in Introduction.

³The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

⁴The figures for 1958 to 1972 include expenditures for plants under construction and not yet in operation.

⁵See appendix C of the General Summary for the 1972 changes in the Standard Industrial Classification.

⁶In addition to data for operating establishments, 1954, 1958, 1963, 1967, and 1972 data are shown for manufacturers' central administrative offices and auxiliary units. Similar data are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these establishments are not available for the years 1955 to 1957, 1959 to 1962, 1964 to 1966, 1968 to 1971, and prior to 1949.

⁷These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volume for this period.

TABLE 2. General Statistics by Geographic Area: 1972 and 1967

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

²The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

EXPLANATORY TEXT

TANNING; INDUSTRIAL LEATHER GOODS; AND SHOES

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 3111—Leather Tanning and Finishing
- 3131—Boot and Shoe Cut Stock and Findings
- 3142—House Slippers
- 3143—Men's Footwear, Except Athletic
- 3144—Women's Footwear, Except Athletic
- 3149—Footwear, Except Rubber, N.E.C.

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 3111.—LEATHER TANNING AND FINISHING

This industry comprises establishments primarily engaged in tanning, currying, and finishing hides and skins into leather. This industry also includes leather converters who buy hides and skins and have them processed on a contract basis by others. For a detailed list of products of industry 3111, refer to table 6A, product codes 31111 15 to 31119 11.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Leather Tanning and Finishing Industry in 1972 totaled \$1,059.5

million. This included shipments of tanned and finished leather (primary products) valued at \$1,018.2 million, shipments of other products (secondary products) valued at \$11.2 million, and miscellaneous receipts (mainly resales) of \$30.1 million.

Shipments of tanned and finished leather (primary products) in 1972 represented 99 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 98 percent. Secondary products shipped by this industry in 1972 consisted mainly of boot and shoe cut stock and findings (\$2.5 million).

Shipments of tanned and finished leather (primary products) from establishments classified in industry 3111 in 1972 represented 99 percent (coverage ratio) of these products valued at \$1,026.4 million shipped by all industries. In 1967, the coverage ratio was also 99 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3111, these establishments accounted for 7 percent of value of shipments.

INDUSTRY 3131.—BOOT AND SHOE CUT STOCK AND FINDINGS

This industry comprises establishments primarily engaged in manufacturing leather soles, innersoles, and other boot and shoe cut stock and findings. This industry also includes finished wood heels. Establishments primarily engaged in manufacturing heels, soling strips, and soles made of rubber, composition, plastic, and fiber are classified in SIC Major Group 30, Rubber and Miscellaneous Plastics Products. For a detailed list of products of industry 3131, refer to table 6A, product codes 31310 16 to 31310 61.

The 1972 definition of this industry is the same as that used in the 1967 classification. The SIC number and title are also the same.

Value of shipments and other receipts of the Boot and Shoe Cut Stock and Findings Industry in 1972 totaled \$206.5 million. This included shipments of boot and shoe cut stock and findings (primary products) valued at \$186.9 million, shipments of other products (secondary products) valued at \$11.5 million, and miscellaneous receipts (mainly resales) of \$8.1 million.

Shipments of boot and shoe cut stock and findings (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 94 percent. Secondary products shipped by this industry in 1972 consisted mainly of finished cattle hide and kip side leathers (\$2 to \$5 million) and fabricated rubber products, n.e.c. (\$2.7 million).

Shipments of boot and shoe cut stock and findings (primary products) from establishments classified in industry 3131 in 1972 represented 95 percent (coverage ratio) of these products valued at \$196.1 million shipped by all industries. In 1967, the coverage ratio was 93 percent. Other industries shipping boot and shoe cut stock and findings consisted mainly of industry 3069, Fabricated Rubber Products, N.E.C., (\$2 to \$5 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3131, these establishments accounted for 9 percent of value of shipments.

INDUSTRY 3142.—HOUSE SLIPPERS

This industry comprises establishments primarily engaged in the manufacture of house slippers of leather or other materials. For a detailed list of products of industry 3142, refer to table 6A, product codes 31420 60 to 31420 71.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the House Slippers Industry in 1972 totaled \$151.4 million. This included shipments of house slippers (primary products) valued at \$138.8 million, shipments of other products (secondary products) valued at \$5.4 million, and miscellaneous receipts (mainly contract receipts) of \$7.2 million.

Shipments of house slippers (primary products) in 1972 represented 95 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 92 percent. Secondary products shipped by this industry in 1972 consisted mainly of men's footwear, except athletic, (\$2 to \$5 million).

Shipments of house slippers (primary products) from establishments classified in industry 3142 in 1972 represented 87 percent (coverage ratio) of these products valued at \$159.4 million shipped by all industries. In 1967, the coverage ratio

was 93 percent. Other industries shipping house slippers consisted mainly of industry 3021, Rubber and Plastics Footwear (\$5 to \$10 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3142, these establishments accounted for 4 percent of value of shipments.

INDUSTRY 3143.—MEN'S FOOTWEAR, EXCEPT ATHLETIC

This industry comprises establishments primarily engaged in the production of men's dress and casual shoes and boots and workshoes. Establishments primarily engaged in the production of protective footwear and rubber soles vulcanized to fabric uppers are classified in industry 3021, Rubber and Plastics Footwear. For a detailed list of products of industry 3143, refer to table 6A, product codes 31431 11 to 31434 79.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. The old classification of Footwear, Except House Slippers and Rubber Footwear, was divided into three separate industries: 3143, Men's Footwear, Except Athletic; 3144, Women's Footwear, Except Athletic; and 3149, Footwear, Except Rubber, N.E.C.

The effect of the revisions on the data are summarized in table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC."

Value of shipments and other receipts of the Men's Footwear, Except Athletic, Industry in 1972 totaled \$1,288.9 million. This included shipments of men's dress and casual shoes and boots and workshoes (primary products) valued at \$1,145.0 million, shipments of other products (secondary products) valued at \$87.7 million, and miscellaneous receipts (mainly resales) of \$56.2 million.

Shipments of men's dress and casual shoes and boots and workshoes (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of footwear, except rubber, n.e.c., (\$50.7 million).

Shipments of men's footwear, except athletic, (primary products) from establishments classified in industry 3143 in 1972 represented 97 percent (coverage ratio) of these products valued at \$1,181.4 million shipped by all industries.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail

portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3143, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 3144.—WOMEN'S FOOTWEAR, EXCEPT ATHLETIC

This industry comprises establishments primarily engaged in the production of women's dress and casual shoes and boots. Establishments primarily engaged in manufacturing men's footwear are classified in industry 3143 and rubber and plastic footwear are classified in industry 3021, Rubber and Plastics Footwear. For a detailed list of products of industry 3144, refer to table 6A, product codes 31441 11 to 31445 79.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. The old classification of Footwear, Except House Slippers and Rubber Footwear, was divided into three separate industries: 3143, Men's Footwear, Except Athletic; 3144, Women's Footwear, Except Athletic; and 3149, Footwear, Except Rubber, N.E.C.

The effect of the revisions on the data are summarized in table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC."

Value of shipments and other receipts of the Women's Footwear, Except Athletic, Industry in 1972 totaled \$1,346.1 million. This included shipments of women's dress and casual shoes and boots (primary products) valued at \$1,240.2 million, shipments of other products (secondary products) valued at \$36.8 million, and miscellaneous receipts (mainly resales) of \$69.1 million.

Shipments of women's footwear, except athletic, (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of footwear, except rubber, n.e.c., (\$16.8 million).

Shipments of women's footwear, except athletic, (primary products) from establishments classified in industry 3144 in 1972 represented 95 percent (coverage ratio) of these products valued at \$1,305.5 million shipped by all industries. Other industries shipping women's footwear, except athletic, consisted mainly of industries 3143, Men's Footwear, Except Athletic, (\$31.1 million); and 3149, Footwear, Except Rubber, N.E.C., (\$29.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at

the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3144, these establishments accounted for 6 percent of value of shipments.

INDUSTRY 3149.—FOOTWEAR, EXCEPT RUBBER, N.E.C.

This industry comprises establishments primarily engaged in the production of all other footwear, except men's, women's, and rubber and plastic footwear. For a detailed list of products of industry 3149, refer to table 6A, product codes 31491 11 to 31494 00.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. The old classification of Footwear, Except House Slippers and Rubber Footwear, was divided into three separate industries: 3143, Men's Footwear, Except Athletic; 3144, Women's Footwear, Except Athletic; and 3149, Footwear, Except Rubber, N.E.C.

The effect of the revisions on the data are summarized in table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC."

Value of shipments and other receipts of the Footwear, Except Rubber, N.E.C., Industry in 1972 totaled \$485.9 million. This included shipments of youths', boys', misses', children's, infants', and babies' footwear (primary products) valued at \$408.7 million, shipments of other products (secondary products) valued at \$53.2 million, and miscellaneous receipts (mainly resales) of \$24.0 million.

Shipments of all other footwear, except rubber, n.e.c., (primary products) in 1972 represented 88 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of men's and women's footwear, except athletic (\$47.1 million).

Shipments of all other footwear, except rubber, n.e.c. (primary products) from establishments classified in industry 3149 in 1972 represented 85 percent (coverage ratio) of these products valued at \$479.1 million shipped by all industries. Other industries shipping all other footwear, except rubber, n.e.c., consisted mainly of industry 3143, Men's Footwear, Except Athletic (\$50.7 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 3149, these establishments accounted for 1 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

Year ¹	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials, fuels, etc.	Value of industry shipments	Capital expenditures, new	Gross value of fixed assets	End-of-year inventories	Specialization ratio	Coverage ratio

TABLE 1A. General Statistics: 1958 to 1972—Continued

(Footnotes for table 1A)

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

	Industry 3111	Industry 3131	Industry 3142	Industry 3143	Industry 3144	Industry 3149

1967.....	474	348	125	(NA)	(NA)	(NA)
1963.....	482	414	149	(NA)	(NA)	(NA)

(NA) Not available. (S) Withheld because the data did not meet publication standards. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²The number of establishments shown for 1967 may not accurately reflect those operating during this period since administrative record cases are excluded. This should not significantly affect the other statistics.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Assets per dollar of shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

(NA) Not available.

(S) Withheld because the data did not meet publication standards.

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

Industry	Composition of new industry					Totals for industries on old SIC				
	Establishments		All employees	Value added by manufacture	Value of shipments	Establishments		All employees	Value added by manufacture	Value of shipments
	Total	With 20 employees or more				Total	With 20 employees or more			
	(number)	(number)	(1,000)	(million dollars)	(million dollars)	(number)	(number)	(1,000)	(million dollars)	(million dollars)
